# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

## ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

### NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

**ONLY \$92.00**

The **VENTURI** Airjector Cooled

**Viewlex**  
500 watts

**COMBINATION  
Slide and Filmstrip  
PROJECTOR**

No projector is better than its cooling system and Viewlex is the **COOLEST** projector made! The exclusive "Venturi-Airjector" breaks up the insulating barrier of heated air, which stubbornly surrounds the lamp, and forces a constant flow of fresh cool air directly against the lamp itself.

But that's scientific talk! What it really means to the user is a projector that is delightfully cool-to-the-touch even after long periods of steady use and vastly lengthens lamp life too!

Specifically designed and engineered for 500 watt projection lamp, yet delivers super-brilliant screen illumination which actually exceeds the illumination delivered by ordinary projectors with 750 watt lamps! The exclusive **LIGHT-MULTIPLIER** optical system plus automatic condenser alignment for perfect focus every time — provides the sharpest pictures ever seen! Each condenser is coded and individually mounted for ease in cleaning — just another indication of the quality that is built right into Viewlex projectors.

One projector projects both single and double-frame filmstrips, vertical and horizontal 2x2 and bantam slides. Professional quality 3", 5", 7", 9", 11" projector lenses can be used instantly.

BLINDS

GIVE YOU  
THE DEGREE  
OF DARKNESS  
YOU NEED

OPAQUE

Many factors influence the instructor in determining how dark the Audio-Visual Room should be: the type of equipment in use, the size of the audience, the age level, whether the picture will be in black and white or color, etc. With Levolor Audio-Visual Blinds you can always enjoy the degree of darkness you desire. Furthermore, Levolor Audio-Visual Blinds enable the in-

structor to change the room from maximum darkness to a soft diffused light—in a matter of seconds—all by an adjustment of the venetian blind slats.

It is, therefore, simple to understand why Levolor Venetian Blinds are specified for Audio-Visual Rooms across the nation. *For full details and specifications write to LEVOLOR-LORENTZEN, INC., 720 Monroe Street, Hoboken, N.J.*

# It's -EMDE- for the Best in SLIDE BINDING MATERIALS

## -EMDE- MOUNTS FOR 2 X 2 READYMOUNTS

Employs one-piece aluminum frame and ultra-thin micro glass for mounting transparencies in Eastman standard Readymounts. Films are not removed from Readymounts. Sandwiched between the glass sheets, Readymounts are simply inserted into aluminum frame, and frame end folded over—and slide is finished. Frame is standard size and thickness—fits any projector or viewer.

No. 20 (20 frames and 40 glass).....Per Box \$2.00  
 No. 202 (100 frames and 200 glass).....Per Box \$8.00

## -EMDE- 2 X 2 ALUMINUM FRAME & 35MM D. F. FOIL MASK

New double-fold aluminum mask and one-piece 2x2 frame is designed to meet most exacting demands of color film users who desire ease of assembly and all possible protection against Newton Rings, film buckling, moisture, fungus, etc. All metal and glass attracts utmost minimum of moisture—the real cause of steaming and fogging of slides.

No. 35-D (20 frames, 20 masks and 40 glass).....\$2.00  
 No. 135-D (100 frames, 100 masks and 200 glass)...\$8.00

## -EMDE- 2 X 2 FRAME AND MASK FOR SUPER-SLIDE & 127 COLOR FILM

New aluminum foil mask accommodates either Super-Slide films cut down from 2 3/4" square films (Rollei size), or new 127 color film. The 2 3/4" square film is merely cut to exact size of double fold mask, placed in folded mask between glass, and inserted in familiar Emde 2x2 aluminum binder. The 127 film is slightly smaller than folded mask, so film is merely taped to one or two edges of mask before folding.

No. 127-SS (20 frames, 20 masks & 40 glass) ..... \$2.00  
 (100 frames, 100 masks & 200 glass) ..... \$8.00

## -EMDE- 2 1/2 X 2 1/2 ALUMINUM FRAME & 2 1/2 X 2 1/2 ALUMINUM FOIL MASK

For 120 and 620 film used in ever-popular reflex cameras. This binder offers a new idea in binders of this size by providing aluminum foil double fold mask to eliminate direct contact of film and glass. It is designed to meet the most exacting demands of color film users who desire ease of assembly. This all metal and glass binder provides utmost protection against Newton Rings, film buckling, moisture, fungus, etc.

No. 12 (12 frames, 12 masks, 24 glass & data labels) . \$1.75  
 No. 50 (50 frames, 50 masks, 100 glass & data labels) . \$6.95

**EMDE PRODUCTS** 2040 Stoner Avenue  
 Los Angeles 25, Calif.

# On the SCREEN

## Cover: The Vikings

The cover subject this month shows Ragnar, the Viking Chief, as he appears in full battle dress in the Kirk Douglas production "The Vikings," released through United Artists. Ragnar (played by Ernest Borgnine) is a roisterous, fanatical leader who aids in introducing the reader to the savagery and violence of the 9th-century Northmen.

A Study Guide on the film will be found on pages 237-240.

## June in May

June Sark Heinrich, former Managing Editor of this publication, returns to us this month as an author. Her article — "Teaching THEM, Audio-Visually" which appears on pages 232-233, is about her work with the mentally retarded at the Oak Community School in Oak Park, Ill.

It is a splendid and rewarding work she is doing with these handicapped young people and June tells you in her own words what it means to her and those she works with.

It is an enlightening article. Those of us who are not actively associated in such endeavors have little comprehension of the great need of such interested and capable workers as June in this vastly important but little known field. Not many of us, perhaps, would be qualified to undertake the work she is doing, even if we wished to.

There is a time for everything. Perhaps we are entering a period now when work of this kind can be successfully done for more people of this kind, for June has discovered they react very favorably to audio-visual instruction. A generation or two ago this may not have been considered. A generation or two ago much of the

equipment used now would not have been available.

We were delighted to receive her article telling of her work and are proud to present it in this issue. You will understand this when you read it.

## Announcement

All of the past and present friends of June Sark Heinrich will be happy to learn she became the mother of a baby girl on Easter Sunday, April 6th. Her daughter is named Doris Sark and both mother and daughter are doing nicely.

## Satire on Teaching

There is a highly unusual and very entertaining article on page 236 titled "Teachers?" that is a review of a satirical film of that name. The film was created and is in use by members of the teacher education staff at the University of California. It brings to mind these lines by Robert Burns: "Oh wad some power the giftie gie us, to see oursels as others see us!" It is not censure, but rather a humorous method of pointing out the type of teacher NOT to be.

## Here's Your Chance

It is not and never has been the policy of this publication to side-step controversy. In fact, when material of a controversial nature is printed in these pages, we invite, and even welcome our reader's reaction to such. That's why we have "The reader's right" page. You have the right to write us your opinion. So if you have opinion contrary to that expressed by our Editor of the Church department in this issue, or any other section for that matter, let us hear from you. GM

# Have you heard?

## Portable T-V Studio

The New York Trade School, oldest institution of its kind in the country, recently unveiled a new development in closed-circuit educational television during a regional meeting of the United States Office of Education in New York.

The new system, representing about a year's work by electronics teachers and students of the school, is unique in educational TV and already has attracted the interest of groups like the American Management Association, the Navy, and the National Association of Manufacturers.

With its new TV set-up, the Trade School can move a portable studio into any laboratory or shop in the four-story building at 304 East 67th Street. So far as industry experts know, it is the only mobile studio that has been developed for educational TV.

"You can't take an automobile or a printing press into the classroom," says George E. McLaughlin, superintendent of the school, "but you can get it there on a television screen."

Another new feature of the Trade School program promises to be of equal or greater importance in classroom and similar uses of closed-circuit TV. The school has built a three-way intercom system into its portable studio, so that students at any time may question the remote lecturer, and he in turn can explain whatever points are not clear. When two or three classes are watching the same demonstration from separate viewing rooms, questions asked by students in one of the classrooms can be heard in all

rooms, as well as by the remote lecturer. The teacher's answer also goes to all of the viewing rooms.

Students at the Trade School operate the cameras and serve as the television "engineers." They also did most of the installation work for the new system. Supervising the project were Paul Zbar, head of the television department; his assistant, Sid Schildkraut, and William Vanderbeek, assistant superintendent.

## People in the News

Howard A. (Hod) Schumacher is giving up his position as Sales Vice-President of Graflex, Inc. He remains on the Board of Directors and will continue to serve as "elder statesman" consultant to the company—and to the audio-visual industry he has served so long and so well. Direction of sales and advertising is being taken over by former Graflex Export Manager, William A. Taylor.

\* \* \*

Clifford P. Wells, formerly in the public relations department at Standard Oil (Indiana), has been appointed director of public relations and sponsored film distribution for the Ideal Pictures' chain of 28 film libraries.

\* \* \*

J. Edwin Foster, Ed. D., has just been named Director of Audio-Visual Materials for the American Heart Association. Before joining the Heart Association, Dr. Foster served for five years as Director, Medical Audio-Visual Institute of the Association of American Medical Colleges. Dr. Foster

attended the University of Saskatchewan where he received B.A. and B. Ed. degrees. He also holds an M.S. degree in education and an Ed. D. degree in audio-visual administration from Indiana University, Bloomington.

J. Edwin Foster

Dr. H. K. Newburn, president of the Educational Television and Radio Center at Ann Arbor, Michigan since 1953, recently announced he will leave this position in September.

Under Newburn's direction the Educational Television and Radio Center, which is supported largely by grants from the Ford Foundation, has developed and distributed more than 180 program series totalling over 2,000 specific programs. The educational stations affiliated with the Center and receiving such programs regularly, now total 29 in number.

Before agreeing to assume the presidency of the Center for a "five year" period, Newburn was president of the University of Oregon for eight years, and before that was dean of the College of Liberal Arts at the State University of Iowa.

President Newburn will announce his future plans at a later date.

\* \* \*

Dr. George L. Hall, director of development for the Educational Television and Radio Center, has resigned his position to become head of Casper College, Casper, Wyoming. His resignation is effective June 30, when he

A few feet away from the lecturer, student James J. Tiesler operates the controls of the school's portable studio, the only one like it developed for educational television.

# OVER THE YEARS

Flexalum Audio-Visual blinds will be your most economical, most practical classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT GLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of black-out and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in... less money goes out—with Flexalum A-V blinds... sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

will assume his duties at the Wyoming school.

At the Center, Hall has directed fund-raising efforts and coordinated information activities of the national program service.

H. K. Newburn, president of the Center said, "We accepted with regret the decision of Dr. Hall to leave a key position on our staff. Through his many contacts with our affiliated stations, business and industry, community ETV leaders, educators, commercial networks, and the press, he has done much to strengthen the entire educational television movement as well as the developmental aspects of the Center."

A native of Oregon, Hall earned his bachelor's degree at the University of

Oregon and a master's degree from Northwestern University. After serving in the army four years as a Lieutenant Colonel, he returned to the University of Oregon where he received his doctorate.

### TEXAVED Leadership Conference

The Texas Audio-Visual Education Association will hold its second annual Leadership Conference, May 9-10 at the Driskill Hotel, Austin, Texas.

This year's conference is being planned by a Program Committee consisting of Henry McCarty, Rex Shellenberger, Ernest Tiemann, and Alvin B. Cogdill.

The TAXAVED has definitely expressed itself as favoring such a Leader-

ship Conference and is very anxious to have it implement the Lake Okoboji Leadership Conference on a state level.

The theme of this year's conference is "Expanding Professional Horizons!" Such questions as—"Are we to be a 'force' (as influence; not pressure) or a collection of individuals? What is our direction? Our mission? How do we gather power? Gain support?" will be asked and answered.

Dr. Arthur H. Moehlman, Ph.D., Professor of History and Philosophy of Education at The University of Texas and Instructor on the *Adventures in Education* TV series of 1957-1958, will serve as Resource Leader.

Since the conference must be self-sustaining, a fee of \$2.00 to \$3.00 will be necessary. Those expecting to attend the Conference are asked to make reservations by writing directly to the Hotel.

### Industrial Film and A-V Exhibition

Due to the great success of last year's Industrial Audio-Visual Exhibition, October 7-10 has been set for the 1958 show to be held once again at the New York Trade Show Building in New York City.

In view of the fact that film and filmstrips have become such a great part of audio-visual education, training and sales, etc., the event is to be known officially as the INDUSTRIAL FILM AND A-V EXHIBITION.

"Because of the enthusiastic reception given this show by both exhibitors and visitors, New York has proved itself a center for the industrial A-V field," stated Herbert Rosen, President of the organization staging this show. "It will be an even bigger event this year including many attractions, for which plans are already in progress.

"Education will play a very important part in this exhibition because I have found that it is very difficult to divide the two different fields of industry and education. Perhaps, in the production of films and filmstrips, it is different, but equipment is always the same."

To date, the majority of the leading A-V companies exhibiting last year have expressed a desire to participate again in this year's exhibition.

This exhibition, organized by Industrial Exhibitions, Inc., 17 East 45th St., New York 17, N. Y., will be held under the auspices of different leading organizations, among them the National Visual Presentation Association, who will hold during this event their sixth annual day of visual presentations and will conduct several work shop sessions, as well as give one of their famous luncheon programs.

## Effective teaching engineered

### FOR LIGHTED AND DARKENED ROOMS

#### TSI DUOLITE

Has built-in, folding, TV-size screen for undarkened rooms; also projects to large screens in darkened rooms.

#### TSI DEVRYLITE

A long record of service to industry and education. Small and compact for auditorium and classroom use.

#### TSI MODEL "D"

Both regular projection and built-in screen projection. Also repeats without rewind. An all purpose projector.

#### TSI MOVIE MATIC

Extremely light weight (under 25 pounds); repeats without rewind on a built-in, self contained screen.

TSI projectors are portable and rugged, precision built, designed to make all parts of the mechanism easily accessible for service—a money saving superiority.

Let us arrange through our dealer for a demonstration for you—no obligation. Address inquiries direct to:

Wally Moen

## Legislation and A-V

Hearings before the House Committee on Education and Labor showed real interest in audio-visuals as a part of educational legislation in March.

The Hill-Elliott bill (National Defense Education Act of 1958: S. 3187—H.R. 10381), subject of the hearings, is rumored to be the most likely vehicle for any educational legislation in this session of Congress. Senate and House hearings on this bill have concluded. Major provisions of the bill affecting A-V provide:

*For teaching facilities:* \$40 million annually to state educational agencies for science, math, engineering or language teaching equipment for public schools, plus an equal amount of Senate money on a 50-50 matching basis; \$40 million annually to institutions of higher education, on a matching basis, for teaching facilities as above.

*Vocational education:* \$20 million annually, to be matched 50/50 by state and local funds, for training technicians in skills essential to national defense. *These funds may be used for purchase of A-V equipment or materials.*

*For research and experimentation:* An Institute is created in the U. S. Office of Education for *research and experimentation to develop and evaluate projects involving audio-visual materials and equipment.* Allotment is \$5 million the first year, \$10 million annually thereafter.

*The key section of the entire bill is the definition of "teaching facilities," and our major effort has been to include audio-visual materials and equipment in this definition.*

Copies of the bill can be obtained from the Senate or House Document Rooms, Senate (or House) Office Building, Washington 25, D. C. Copies of NAVA's proposed wording changes and additional provisions are available from NAVA on request.

We have some misgivings about further government expenditures for anything, even education, right now—but it certainly looks like some sort of educational-support legislation will be passed, and it seems wiser to do all we can to make sure such funds are expended efficiently through use of audio-visuals, especially since our taxes must help pay the costs.

## Georgia Scores Again

The Henry County School System has for the third time earned the highest rating in Georgia in audio-visual education. The announcement was made by Dr. G. E. Oliver of the University of Georgia, and president of the Audio-Visual Affiliate of the Geor-

## SUDDENLY THEY RESPOND . . .

### Show Exactly What You Mean with the AO SPENCER OPAQUE PROJECTOR

#### SO EASY

Teaching and learning are much easier with this unique projector.

You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them.

#### SHARPEST IMAGE

Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

#### 1,000 WATT INTENSITY

High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up.

#### STURDY, PORTABLE

The projector is built of rugged, light-weight, lifetime aluminum. Carry it anywhere.

gia Education Association.

The rating, which is based on a state-wide survey for the 1956-57 school year, revealed that the Henry County system made 547 points out of a possible 690 points in the survey. Dr. Claude Purcell, State Superintendent of Schools, said, "No other school system in the state has made this record in audio-visual education."

Garland Bagley, Director of Audio-Visual Education for the State Department of Education, pointed out that this survey included the use of audio-visual materials, teacher and administration competencies, and the adequacy of materials, equipment and facilities. The survey reveals that Georgia is constantly and steadily improving in all aspects of audio-visual education.

### Boston Gets In-School T-V

"Science—6th Grade," the first in-school television series in Massachusetts, got underway Friday, March 28, at 10:30 a.m. in Boston, on WGBH-TV, Channel 2.

At that time Owen B. Kiernan, Massachusetts Commissioner of Education, and others briefed classroom teachers on details of the first in-school TV series and suggested the best use of "Science—6th Grade" study guides which had been distributed to the 49 participating school systems. Appearing with Commissioner Kiernan were: in-school teachers, Eugene Gray, Newton Public Schools; Norman Harris, Museum of Science; and Michael J. Ambrosino, WGBH-TV executive producer of school programs.

Mr. Gray and Mr. Harris are teaching the spring series of eight half-hour elementary science programs each Friday morning (except Good Friday) through May 23.

The first program was called "Building Blocks of Matter." It dealt with elements, compounds, molecules and atoms, the basic components of matter. Mr. Gray and Mr. Harris demonstrated what takes place when matter changes from a solid to a liquid or to a gas.

A full fall schedule of daily in-school programs will include the following subject matter: science social studies and citizenship; music and art; literature and drama. The fifth series is to include many subjects in an "omnibus" presentation, in line with the planners' policy to utilize the great number of cultural resources in the area.

These in-school programs are presented by the Eastern Mass. Council for School TV, administered by the Mass. Executive Committee for school television appointed by the State Board of Education.

### Indiana Adopts New A-V Rule

In an action believed to be the first of its kind in the country, the Indiana State Board of Education recently unanimously adopted a new Rule requiring every classroom in the state to be provided with facilities for A-V instruction.

Included in the provisions for utilization are light control, proper electrical installations, and acoustic treatment. The Rule recommends:

Electrical installations are to include adequate electrical outlets at the rear and front of the room, a room-light switch on the wall opposite the projection screen, sufficient circuits to permit simultaneous use of equipment in any number of adjacent classrooms, 20-ampere-fused circuits, and 1¼" conduit in new central sound systems to allow for cable installation later.

Acoustic treatment suggested includes use of acoustic tile, acoustic plaster, and other sound absorbing materials, and consultation with an experienced acoustical engineer to determine the proper treatment.

Copies of the new Rule can be obtained from NAVA on request; ask for No. 1707. Or write Mrs. Altha Sullivan, Administrative Assistant in Charge of Audio-Visual Instruction, State Superintendent of Public Instruction, Indianapolis, or Mr. L. C. Larson, Director, Audio-Visual Center, Indiana University, for further information.

### Journalism Via Slides

A new and more effective means of teaching journalism with the use of 35mm slides is a project undertaken

**For

165 WEST 46th STREET, NEW YORK 36, N. Y.  
959 SEWARD STREET, HOLLYWOOD 38, CALIF.

by Jim F. Palmer, Associate Professor of Journalism at the University of Houston.

Mr. Palmer is currently developing a technique of using super color film and simplified black and white transparencies to visually project ideas in class rooms. His equipment is a 35mm "Vacation Time" camera and an especially designed simplified developing unit. The unit, designed to handle black and white or colored slides, can be easily operated from the operator's desk or office. Thirty-six slides can be prepared in thirty-six minutes at a cost of one penny a slide.

Mr. Palmer is also experimenting with his portable camera and desk slide equipment in microfilming a running file of student articles, homework and weekly writing assignments.

A preliminary report in mimeographed form, outlining procedure and methods, has already been put into practice by several industrial plants in the Southwest in safety training work and has been well received in such far off places as West Germany. Copies of the preliminary report can be had by writing Mr. Palmer at the University of Houston, Cullen Blvd., Houston 4, Texas.

## Reappraisal of U. S. Educational System Urged

A systematic reappraisal of the American educational system is necessary to meet the challenges of the missile age, Dr. George L. Haller of the General Electric Company told Syracuse Rotarians at the Onandaga Hotel recently.

A vice president and general manager of General Electric's Defense Electronics Division, Dr. Haller was formerly dean of the College of Chemistry and Physics at Pennsylvania State University.

"We must explore and adopt methods of increasing the productivity of our educational system. We must find ways to give more and better education to more students without a direct corresponding increase in the size of our teaching force or our school budgets," Dr. Haller said.

He proposed increased use of educational television as one way of improving educational productivity, pointing out that by using this new "teaching tool," one top teacher can be seen in many classrooms at the same time.

He said that this increased efficiency would help overcome the present shortage of teachers, pave the way for teacher salary increases and increase the number of technically trained persons needed in business and industry.

Dr. Haller also urged the study of

academic television as a substitute for construction of large, expensive central schools. "Instead of spending large sums of money on fleets of school buses, garages, drivers and maintenance, why not invest in a microwave relay system and a few television receivers and bring the best science, music, art and mathematics teachers into the classroom through the air waves?" he asked.

Citing the recent publicity given to the great strides being made by the rigid Russian educational system, Dr. Haller pointed out that similar programs have been in use in other Western European countries for several

years. "If these European children can do it, why can't our own children?" he questioned.

Dr. Haller also emphasized that, while stressing science, we must not neglect such other basic courses as English, foreign languages and history.

## Spring Meeting of IAVA

The Illinois Audio-Visual Association met in Springfield, April 11, with an attendance well over 100. Highlight was an audience-participation, visualized presentation by Dr. Mendel Sherman, on "The Cross-Media Approach to Learning." The afternoon was de-

## Low Cost 16MM Film Storage in Open Type Cabinets With Adjustable Racks

Now you can meet any Changing Requirements by using Open Type Film Cabinets with RACKS ADJUSTABLE Vertically on 1" Centers.

Cabinets are Allmetal with CLOSED TOP, BASE AND SIDES equipped with ADJUSTABLE Separator Racks for 400' to 1600' reels and cans or any combination of these sizes. Standard Widths 30", 36" and 48". All units 75" high and 15" deep.

Also available: FILM CABINETS WITH DOUBLE DOORS AND LOCK (Stationary Racks) for any combination of 400' to 1600' reels and cans. INDIVIDUAL SEPARATOR RACKS, ideal for small Film Libraries Standard lengths 29", 35", and 47".

Open Type Film Cabinet with Separator Rack across Front.

## FOR YOUR PHONOGRAPH RECORD LIBRARY

## DISCABINETS

Allmetal Sectional Discabinets with Complete Cataloging System are ideal for the Growing Record Library. Eliminates Misplacement of records, saves Time and Valuable Floor Space. Available for 7", 10", 12" and 16" Records. Cabinets with Double Door and Lock capacity 540 for any combination of 7", 10" and 12" records are also available.

## WALLACH AND ASSOCIATES INC.

DEPT. ES

1589 ADDISON ROAD

CLEVELAND 3, OHIO

voted to ten demonstration centers of AV techniques, ranging from bulletin boards to zoom lens photography. All ten were in operation simultaneously, each was given three times.

Of special interest is the proposal of the constitution revision committee to eliminate the "associate" membership status and instead extend active membership to "commercial" people who are actively interested in A-V matters. It is proposed also that the Executive Committee henceforth consist of three persons engaged in public school work, two from teacher training institutions, one "from the indus-

trial or commercial audio-visual field," and one at large. The latter would presumably be a superintendent. These proposals are to be voted on at the annual fall meeting, to be held in Chicago, October 24-25.

### Coming Events

The 10th Anniversary session of NAVA's National Institute for Audio-Visual Selling will be held July 20-24 at Indiana University, Bloomington, Ind. Four courses will be given—Salesmanship, Applied Selling, Sales and Business Management, and Preparation and Use of A-V Materials.

Instructors are drawn equally from the university faculty and from successful leaders of the A-V Industry. Classes run from 8:30 a.m. to 5 p.m., in the air-conditioned Indiana Union Building, where excellent housing and food are also provided. Tuition \$35; rooms \$3 and \$4 per day; food about the same. Cost of materials kit for the "Preparation" course \$5. Social highlights are traditional Institute Welcome, Sunday, July 20, and the annual Institute Picnic, weather permitting, an outdoor barbecue. Many of the most successful A-V salesmen and dealers look upon the time spent at the NAVA Institute the best investment they ever made. The course is timed to tie right into the Chicago Trade Show and sales meetings.

(1) Snap it... see it! (2) Slip it into a mount, and (3) project it as big as you want.

### Polaroid Corporation Announces

## QUICK, EASY WAY TO MAKE SLIDES

Now with a standard Polaroid Land Camera, you can make slides in a classroom or lab, and project them immediately.

**Polaroid Corporation has perfected a film** which produces black-and-white slides right in a regular Polaroid Land Camera. Just elick the shutter and two minutes later you have a slide ready for projection.

**The complete system includes** the standard Polaroid Land Camera, the film, mounts, projector, plus a versatile Copymaker that lets you make slides from any textbook, existing photograph, charts, graphs and titles. You can speed teaching by making slides of laboratory setups, students in action, and on field trips. Test material can even be projected in lighted classrooms during exams.

**Two sizes are available**—2¼ x 2¼, and 3¼ x 4 for use in existing "lantern slide" projectors.

**These slides cost about ½ as much as conventional slides.** But the real saving is in the time and effort that it takes to put any picture on the screen.

**Send in this coupon** for detailed information, plus a case history of how one teacher uses these new on-the-spot slides.

Polaroid Corporation  
Dept. E5 - Cambridge 39, Mass.

Syracuse University announces its fifth annual Summer Workshop on Audio-Visual Materials in Libraries, on campus, August 11-22. Designed for practicing librarians, teachers and students, the workshop is built around the university audio-visual center's five departments: Photo Services, Graphic Arts, Educational Film Library, Motion Picture, and Audio-Visual Services. Three semester hours of credit may be earned by those qualified. Apply to Carl H. Melinat, School of Library Science, Syracuse University, Syracuse, N. Y. Eight other A-V courses are given in Summer School, including A-V Communication in Religious Education, July 21 - Aug. 1.

### Calendar for 1958

May 5-9—American Society of Training Directors Annual Convention and exhibit, Sheraton Park Hotel, Washington, D. C.

May 9-10—Texas Audio-Visual Education Association, Driskill Hotel, Austin, Texas.

May 12—NAEB Radio and Television sessions, 14 Gregory Hall, Urbana, Illinois.

June 16-27—Fourth Annual Audio-Visual Workshop in Graphic Materials Production. June 27, 19th Annual Audio-Visual Conference, the University of Oklahoma, Norman, Okla.

July 20-24—National Institute for A-V Selling, Indiana University, Bloomington, Indiana.

July 25-27—Educational Film Library Association, 15th Anniversary Conference, Morrison Hotel, Chicago.

July 26-29—National Audio-Visual Convention, Morrison Hotel, Chicago.

October 7-10—Industrial Film and A-V Exhibition, New York Trade Show Building, N. Y. City.

October 24-25—Illinois Audio-Visual Association annual meeting, Chicago.

# ARCHIVES AND COPYRIGHTS

It was while attending a luncheon meeting of the Washington AV War Workers group that I began to get first insights into what an archivist thinks about. The speaker was from the U. S. Archives, and he told about their concern and search for methods to preserve film for a thousand years — or was it five thousand? I don't recall exactly, and it really doesn't matter. The striking thing to me was the contrast between the archivist's point of view and my own.

Remember, this was a time of great national war emergency. The primary concern of most of those present was how film could be put to work most effectively and used right now, today, to help solve the nation's problems. Our concern was to find most efficient ways to use film to serve human needs. The archivist's concern was to preserve film for an inconceivably long period of time. What a contrast in views! One view was not better than the other. I know we need archivists. But making every effort to be tolerant, it seemed to me that films were to be used, not saved.

Recently another situation came to our attention which provides a similar contrast in points of view. It is not exactly parallel to that wartime experience, but it seems related. It did remind us of our earlier reaction to the goals and thinking of the archivists. Here are two audiovisual directors with sharply contrasting notions about the preservation of film. One believes sincerely that all educational films should be printed on a new tougher film base that is practically indestructible. Then films will last and can be used for twenty years or more. The other av director believes that already films are lasting too long and that old films should be withdrawn from film libraries and use much sooner than they are.

Again in considering these two contrasting views it is difficult for us to be tolerant. We are biased—or stubborn! We side with one point of view most decidedly. We believe that educational films are instructional materials to be used for instruction, and like books and recordings and filmstrips and all other instructional materials in our schools they

should be up-to-date and the best that can be had.

Now right at this point we run the risk of being accused of believing that "best" and "up-to-dateness" are synonymous. This we deny. We know full well that the textbook with the latest copyright is not necessarily the best. But we also know that current textbooks are many ways superior to those published ten and twenty years ago. We also know that educational film makers have learned something from experience. The recently produced audiovisual materials tend to be superior to those made many years ago. (We won't even mention how changes in automobile styling and women's clothing make picture materials obsolete in the eyes of child-learners long before the pictures are worn out!)

Why is it that educators apply such different copyright standards to textbook and audiovisual materials? School systems that demand recency in textbooks pay no attention to recency in audiovisual materials. Boards of Education will adopt books for a limited five year period and insist upon review at least every five years. At the same time they ignore the fact that audiovisual materials with copyrights of twenty years or more are used regularly in their schools. Why? No, it isn't a matter of money. Books cost money, too! We think they haven't thought of what they are doing. They're not thinking of films as instructional materials. And it may be that their audiovisual directors are something like archivists at heart!

So what are we saying? Simply this: We believe that those responsible for audiovisual programs should do everything they can to make sure the materials they offer for use are up-to-date and the best available. They should review the policies and standards related to other instructional materials and make sure that policies for the replacement of audiovisual materials are consistent.

Finally, we believe that archivists would not make good audiovisual directors.

*Paul C. Reed*

# The A-V Building Coordinator

## A Curriculum Leader

by *Lester B. Sands*

Professor of Education  
University of California  
Santa Barbara College  
Goleta, California

Jim Roberts, Building A-V Coordinator of Cathedral Oaks School, Goleta, Calif., is shown in the process of giving his 6th grade assistants an assignment for showing in a teacher's room.

**B**ECOMING an A/V Building Coordinator may at first seem to be an undistinguished assignment since it ostensibly involves the hauling of equipment and conveying of supplies from teacher to teacher—like being an errand boy for the A/V Center and the Principal. But a more careful analysis of the assignment reveals that the Building Coordinator is in professional contact with almost every person and educational activity in the school, and is in fact taking on the role of an unofficial curriculum coordinator. It is apparent that the position is destined, by the nature of its functions, to become one of the most influential and constructive that has ever been conceived in the field of education.

Every Audio-Visual Director in a school system knows that the effectiveness of his total program is dependent upon what happens in the individual schools, and that the efficiency of these programs is largely dependent upon the work of those designated as A/V Building Coordinators. The increasing numbers of schools making this assignment is evidence that it is satisfying basic educational needs.

The significance of the Building Coordinator can be seen in his relationships (1) with all the teachers; (2) with the Instructional Materials Center; (3) with the Administration; (4) with Special Student Groups; (5) with P.T.A. and Community Groups; (6) with his own classes; and (7)

other Curriculum Workers. In each of these relationships he may become a vital force for educational improvement, or he may operate on a simple, mechanical service level. The following analysis of his activities shows that by realizing the potentialities of audio-visual procedures, the routine responsibilities of his job may be converted into the curricular functions of a creative leader in education.

(1) *Teacher Relationships.* Building Coordinators who work at a mechanical level are primarily concerned with establishing efficient routines for such audio-visual services as ordering, receiving, and returning instructional materials and equipment; or, of developing a group of dependable student-operators. The Coordinator may also teach the instructors how to operate a/v machines so that they may handle their own previews before school, at noontime, after school, in the evenings, or on no-school days. They also keep teachers informed regarding accessions to the local catalogue; and they

arrange for demonstrations and evaluation sessions of new materials and methods.

At a higher professional level, the Building Coordinator, while keeping routine matters in proper focus, is deeply concerned with meeting the educational needs of teachers and students. He is eager to assist the teachers who are experimenting with new procedures and help them evaluate materials and methods. He takes initiative in arranging for previews of new materials appearing on the commercial market or at the A/V Center. And he continuously studies the curriculum of the school to comprehend how its needs may be met with varied types of teaching aids such as models, dramatizations, dioramas, and duplications. This sensitivity to curricular needs is characteristic of a creative worker.

(2) *A/V Center Relationships.* The Building Coordinator works harmoniously with the A/V Center in all routine processes and usually assists in making policies basic to the a/v operations of a school system. He cooperates in evaluating materials of instruction and investigates the technical problems related to equipment and materials.

At the more professional level, the Coordinator becomes an agent for communicating the instructional needs of the teachers to the Center where they can be met. He is dedicated to improving instruction and will familiarize himself with all materials and processes which show promise of value to teaching. He is creative in suggesting ways of solving educational problems and is an asset to curriculum committees that are concerned with relating instructional aids to learning.

(3) *Administrative Relationships.* The Building Coordinator who functions at the service level will meet the audio-visual needs of the school for assembly and public relations programs by providing projectors, public address systems, tape recorders, and exhibits as requested. He is distinguished for exactitude in arranging schedules and keeping the storeroom and its materials sharp, tidy, and accountable. He aids the administration by locating "good buys" at wholesale, firesale, and war-surplus markets. And he makes no unreasonable demands for money. (To many administrators, any request for a/v money is unreasonable.)

When operating at a professional level, the Coordinator is an active, imaginative person who is loaded with ideas for helping the administration improve classroom instruction and public relations. To this end, he knows what materials are needed and

makes frequent, probably chronic, requests for money. And he calls on the administration for more flexibility in class schedules and more freedom for teachers to experiment with better methods and materials.

(4) *Special Student-Group Relationships.* The Coordinator usually organizes a group of students to operate projectors, distribute and collect learning aids, and assist teachers with previews. These students serve the school well and bring credit to the Coordinator.

At the professional level, the Coordinator is concerned that these student operators not only perform efficiently, but that they receive educational growth from their experiences. Operators are required to keep up in all academic work and not miss classes. And they can be more than projectionists by becoming responsible for introducing films and instructional materials to classes. The student-operators may also become sensitized to the educational needs of teachers and classes, and they can communicate their impressions and information to the Coordinator for appropriate action. In this way, the students participate in curriculum planning.

(5) *P.T.A. and Community Relationships.* The Building Coordinator is inevitably called upon to help in P.T.A. and Community programs by projecting materials, lending equipment, and providing exhibits. While his responsiveness may improve public relations, he can function at a higher level by using these community contacts to disclose important aspects of the educational program with which

parents and laymen may be unfamiliar. He may recommend or provide materials that elucidate the school curriculum, teaching procedures, and educational objectives. And he may encourage mutual understanding by disclosing the natural integration existing between home, school, and community as educational agencies.

(6) *Classroom Relations.* Since the Building Coordinator is ordinarily a classroom teacher with full-time responsibilities for a group of students, he is usually overworked. However, he can find a compensation by using with his own classes many of the materials that come to the school.

These may provide enriching and inspiring experiences.

(7) The foregoing analyses indicate that the Coordinator is a constructive force in the school as he helps everyone with their curricular problems. His suggestions may also be carried into broader curriculum groups that are planning for the whole school system. Thus, his influence is ever-enlarging as he gives increasing professional services.

This analysis indicates that the Building Coordinator should be recognized for the important curriculum work that he may perform in a school. His job is not a simple one of hauling materials, but is loaded with professional responsibilities and unlimited opportunities for significant educational services. And with the general reduction of supervisory and curriculum services in the schools, it is the privilege of the Building Coordinator to function as a curriculum leader.

"I was positive that once the School Board saw the advantages of audio-visual instruction, they would go all out for it."

This is part of the workroom where visuals are produced. The important Contura-Constat, not shown, is used in the dimly-lighted next room. The IBM Electric with Directory typeface is essential to schools preparing many plates. The specially designed work-desk includes a center light-table and an auxiliary printer using sun-lamps.

Newtonville 60, Mass.

# How Overhead Projection Aids Large Group Instruction

**A** SPEECHMAKER begins with the standard device of an attention-getting story. But a teacher must do better than that. He must convince the pupils at once that there is something to be learned. It is easier to do this with visuals and words than it is to do it with words alone. And overhead projection is the most likely means, for the teacher stands with the projector in front of the class in a lighted room.

Here is an example of how the overhead projector is used at Newton High School to increase the effective-

ness of a lesson: In the session on study habits the pupils first see a simple graph that shows the effects of note-taking on improvement of grades on tests. Next, a chart shows the learning that results from different methods of study. This is followed by a bar-graph, built up one bar at a time, showing the effects of spaced practice in the learning of code. This is not a gimmick introduction: it is evidence underlying the main point that how the pupil studies makes a difference in how much he learns. The pupil has literally seen what the in-

structor is talking about.

Following this introduction are twelve suggestions for getting the most out of study time. These suggestions are salted with illustrations that change the pace at the same time they are reinforcing the point being made. For example, pupils are reminded that their study tables may be surrounded by invitations to nonstudy: a picture of the boy or girl-friend, souvenirs, hobby equipment—all the reminders of their extracurricular life. At this point the screen is filled with a sepia photocopy of Dante's stern

countenance. The point is easily made. If what the pupil sees when he looks up from his lessons is the accusing visage of the author of *The Inferno*, he will return to his book as a relief, not a chore. At another point in the lesson pupils see a picture of the physical conditions that help make study effective.

Or again, in a lesson on the writing of paragraphs, the pupil sees an example of the writing of one of his classmates. In another lesson he sees how to improve his handwriting. In another he may use contrasting works of art as subject for composition, or hear the instructor's explanation of a principle as he studies an abstract visual statement of that idea, in operation on the screen. He may see a comparison of good and bad writing — not by counting so many lines up from the bottom on a sheet in his hand, but by noting the exact points indicated on the screen by the instructor. And it may be that if he sees a few of the spelling demons on a 12 x 12 screen he will get a picture of their spelling.

These are a few examples of the materials we use in large group instruction of sophomore students of English. Classes range in size from 85 to 150, but they do not meet in such large groups more than once a week. The large group lecture is used to present that part of the course of study that does not require give-and-take discussion. Pupils are responsible for the contents of the lecture, for the material will not be taught again. Many more dramatic applications of visual teaching are being made in other subject fields — math, history, typing — for there is no course that cannot be improved by the extensive preparation that overhead projection implies.

The advantages of overhead projection may be well known, but the reasons for its particular effectiveness in secondary school instruction deserve review. First, the instructor "runs" his own projector and controls his own visuals. The pace of the lesson can be controlled. Second, the overhead projector is mechanically simple. The only thing that can go wrong is the bulb. We have used only five of these in two years, and only once did a bulb "go" during a lesson. Third, the mechanics of producing transparencies can be mastered by the teacher himself. He need not search through catalogues for a readymade transparency that may or may not come close to what he has to say. He can, within the limits of his time

and imagination, produce the precise image that he wants his pupils to see. Fourth, the teacher works at the front of the class in a lighted room, since a 1000 watt bulb eliminates the need for blackout curtains. His position enables him to watch the reaction of the class. The lighted room permits pupils to take notes on what they see and hear. Fifth, the school is investing in better preparation of lessons and recognizes that the teacher is as surely at work when he prepares his lesson as he is when he presents it.

There are important side benefits, too. Some teachers get satisfaction from reaching larger groups of pupils with lessons that are as good as they can make them. Large group instruction also acts to bring the course of study into line, to make clear what is taught in one year and not to be repeated in the next. At Newton High School the business letter is taught once in three years, in the junior year. The pupil learns because he knows he is responsible, that the lesson will not be repeated.

Why it is that overhead projection has not been widely adopted? Perhaps the chief reason is that it is relatively new. It was virtually unknown until World War II, and not until the end of the war did it find its widest use in armed services classrooms where it

is now a standard item. Another reason is that while the equipment itself is not expensive its proper use calls for installation in the classroom, not for storage in the audio-visual closet. Since the overhead projector can do everything that a blackboard can do (including "boardwork") and do it with less trouble for the teacher, it should be part of the equipment of the classroom. A teacher should no more have to requisition this projector than a doctor should have to phone the next town for a suture after he has the patient opened up. The machine must take the place of the front row center desk and there must be a screen ready to be pulled down.

The minimum cost is \$400 per classroom. This implies the use of the machine as a desk-side blackboard, nothing more, and is perhaps a false economy. Another \$50 for simple printing and developing equipment to serve the whole school and a few supplies will result in some sample lessons that will convince the most skeptical. The applications and budgets can grow as the value is received. And value is received — by the pupils who get better instruction, by the teacher who is given time to prepare, and by the parent who visits the school and wonders why he was never taught in this obviously more effective way.

The assembly hall set-up pictured here is not as satisfactory as the special hall.

# Teaching \*THEM

## Audio-Visually

by June Sark Heinrich

\*the mentally retarded

**T**HEY must be segregated from normal people... they must be integrated into school and community life... they're all spoiled... they have gentle and sweet personalities... they must have their learning made concrete... they can't concentrate long enough to learn from films... they need more academic training... they need more practical experience in living... they like music and art... they have no ear for music and no taste for art."

THEY are the mentally retarded, those with impaired or incomplete mental development. When I began working with a group of them—all teenager and older—I was amazed at how easily some people summed them up in statements like those above. I soon discovered they cannot be so easily summarized. They show all the infinite and wondrous variety of humankind. They cannot so easily be divided, like eggs, into "highgrade" and "lowgrade." It is not so easy to divide them, like dogs, into "trainable" and "educable." They are human beings, each with a personality of his own, a mentality of his own, each with his own limitations and capabilities, each with the right in this democratic society of ours to be his best and fullest self.

And so I set about to try to help these teenagers and young adults fit more usefully and happily into home and community life. That was the general purpose of the private school organized by the Oak Park-River Forest Association for Retarded Children with the cooperation of the Oak Park Public Playgrounds and other community agencies.

---

*June Sark Heinrich is director of the Oak Community School and Workshop for the mentally retarded in Oak Park, Illinois. The school now has three groups: the class and workshop for teenagers and young adults described in this article, an intermediate group, and a pre-school class.*

The tape recorder gets daily use at the Oak Community School. Nobody is "Mike-shy."

As in too many communities, in Oak Park our mentally retarded have special classes in the public schools only until about age 16. But what about the young people too old for these classes? What about the young people not accepted in these classes for the so-called educable mentally retarded?

It was these young people that the Oak Community School was intended to help first. The class for teenagers and young adults meets every weekday at the Stevenson Playground field-house in Oak Park. Our present hours are from noon to 3 P.M. with extra time for field trips and morning jobs for some of the young people. A few of the young men have worked mornings in the Oak Park branch office of the American Red Cross. Several of the girls assist in a playground-sponsored nursery school.

We are confident—the parents and I—that many of these young people can be prepared to make real contributions to society—in jobs,\* in community life, in family life. We know all of them can and should live richer

and fuller personal lives.

### Audio-Visuals Right Away

One thing I decided right away when I began working with these teenagers and young adults: we would use a variety of audio-visual materials. What better opportunity? What greater challenge? Here was a group of young people who could read only with difficulty (some not at all). They could not be very effectively reached through the abstract symbols on the printed page. They could be reached much better, I was sure, through motion pictures, field trips, slides, recordings, flannelboards, radio and television.

And when they were reached, they needed to act upon their learning, to do things, to try things, to go places, to put their learning into practice with their hands and bodies—not just with their tongues and heads.

---

\* One of the young men now works two or three days each week in the stockroom of a large publishing house in Chicago.

Even before we all had paper and pens, we had a motion picture projector and tape recorder — borrowed at first, but later our own — thanks to the financial help of several community organizations.

### Films Get Action — Sometimes

Though some warned me that my young people (ten of them the first months) would not sit still long enough to learn from motion pictures, I soon proved the contrary to my satisfaction. One of the first films we used had a dramatic effect: a 19-year-old youth, afraid of water, determined he would swim.

The Coronet film, titled *Overcoming Fear*, tells the story of a high school boy, much afraid of water, who overcame his fears. After the first showing, it was easy to see that George was greatly affected. He talked about the film often during the following week. We saw it again before our second swimming class. George went into the pool that week (though he had refused to do so the first week). In a month he had learned to put his head under water. Although today, many months later, he still can't swim, he's already taken the big step, the hard step — thanks in part to a motion picture.

So far the best results for us seem to have come from films on human relations — understanding yourself, getting along with others, how to introduce people, how to develop a sense of responsibility, etc. Films aimed at specific intellectual, manual or verbal skills — making change for a dollar, improving your handwriting, describing an incident — have not been so obviously helpful. One of the difficulties is that often the simple lesson

taught in the film is enacted by primary-grade children — and my grown-up young people are not and should not be interested in imitating children. My young people seem to benefit most from the ten-minute, high school level film with a simple human relations lesson set in dramatic form.

Often the young people lose themselves so completely in the film story that they react very audibly and approvingly as dependability, self-reliance, and good manners win out in the end. When moved, they applaud. True, some are caught by one film, others by another; and the most retarded young one (the one some would consider not "educable") does not follow much of any film with real understanding. But all the others show real interest and understanding in follow-up discussion and playacting. Following a film on good table manners, we immediately act out a dinner party. Following a film on making change for a dollar, we plan and take a trip to the dime store to buy the contents for Junior Red Cross gift boxes to be sent to young people in other countries.

Once we used the Norman McLaren abstract films *Fiddle-dee-dee* and *Stars and Stripes* to set off a painting session. It was interesting to see the resemblance between the McLaren art and the student art — and the students had fun "painting soundtracks."

Yes, motion pictures are very popular with my young people. There are many sighs of regret on days when we use no films. Almost always we use a film twice, sometimes three times. Normally we use two or three films a week.

One of the most successful parts of our film program is the actual opera-

tion of the projector. From the beginning of our class, one of the young men has set up, operated, and put away the motion picture projection equipment. He is training other students and has become so expert an operator himself that he projects films for community organizations.

### News Filmstrips Are Fun

With filmstrips we can work more slowly, take more time to explain and discuss as we go along. This has many advantages with the mentally retarded. And of course every one of them can and likes to operate the filmstrip-slide projector.

For several months we used the Visual Education Consultants' news filmstrips with pictures from the preceding week's news. Like all of the films and filmstrips we use, these filmstrips, of course, were planned for and are used in regular classrooms throughout the country. We used each news filmstrip several times during the week, focusing our discussion on just the pictures that seemed most interesting and understandable to most of the group. The filmstrips definitely helped, in my opinion, to encourage the young people's interest in what goes on in the world. We have also used, with some success, filmstrips on human relations (from Young America Films) and sound filmstrips on music appreciation (from Jam Handy). Simple captions on filmstrips give good practice in reading.

### Every Day Is Tape Day

Hardly a day goes by without use of our tape recorder. Talking into a mike scares no one, and we regularly tape-record news stories for our monthly newspaper, discussions of library books, reports on field trips, "man-on-the-street" programs on all kinds of subjects, reports on field trips. Sometimes we even record our rhythm band or the progress we're making playing that simple little classroom musical instrument, the tonette. Some of the students have real speech difficulties; in some cases the tape recorder seems to have helped them improve their speech. We even taped a radio program about our class activities that went on the air twice over a local station.

No TV program yet! But we have gone behind the scenes at Chicago's educational TV station and occasionally we have a TV home-viewing assignment (most of the young people seem to spend much of their free hours televiewing everything and anything).

### The Community is Our Classroom

In a very real sense the community

(Continued on page 235)

Students at Oak Community School like to operate the audio-visual equipment.

# test questions on the mass media

by Joseph Mersand

Chairman of the English Department  
Jamaica High School, New York City.

FOR the past few years in Jamaica High School, on each Mid-term examination, there has been a ten-credit question on Library Skills and Communication Arts. Devoting as much as ten percent of an examination in each of the eight grades of English indicates how highly we regard the importance of the library and the mass media. The test questions constitute but one phase of a several-pronged attack we are making to recognize the mass media in our total English program.

Other aspects of this emphasis consist of:

1. Using an eight-term Syllabus in Communication Arts, in which there are detailed studies of newspapers, magazines, motion pictures, radio and television.

Pupils are taught principles for evaluating the five forms of the mass media enumerated above.

2. We distribute lists of (recommended) radio and TV programs.
3. Distribution among the staff of information of *all* the broadcasts of NBC, CBS, and other stations which are willing to send us this information (WABD, WPIX, WNYE, WNYC).
4. We circularize the entire school staff with releases about such programs as U. S. Steel Hour, Hallmark Hall of Fame, Twentieth Century, etc.
5. We use a television receiver in the English classroom for such worthwhile programs as can be tuned in during the day.

We have not been too happy with the programs that are available during school hours, but several of our teachers are watching the series produced jointly by the N. Y. C. Board of Education's WNYE and WPIX.

6. We use WNYE's FM programs on the senior high school level. Notable are the programs on

mythology and the ones on English literature.

7. For the development of the library skills lessons are conducted by members of our library staff in terms 1 and 3 to incoming freshmen or junior high school students and in term 7 for the seniors. Special lessons are arranged at any time for the library or in the classroom by any teacher as the need arises.

So much for the total program. Now, about the test questions. Perhaps the best way of indicating how we select them is to examine the set for English I and 8 in our last (November, 1957) examination: "Eng. I"

VI. *Communication Arts and Library*—Write the numbers 1 to 10 on your answer paper, and next to each write the letter of the choice that correctly completes the corresponding statement below:

1. On what page in a newspaper, does the management express its own opinion? (a) sports (b) editorial (c) home-making.
2. The motion picture "Man of a Thousand Faces" is based on the makeup ability of (a) Lon Chaney (b) James Cagney (c) Frank Sinatra.
3. Which books may not be taken from the Library for use? (a) novels (b) travel (c) reference.
4. Which of the following now has his own TV program? (a) Frankie Laine (b) Sammy Davis Jr. (c) Pat Boone.
5. Which radio station plays more good music than the others? (a) NBC (b) WOR (c) WQXR.
6. A famous news commentator is (a) George Gobel (b) Ron Cochran (c) Groucho Marx.
7. A Shakespeare Theatre in America is located in (a) Stratford, Conn. (b) Albany, N. Y. (c) Williamsburg, Va.
8. The most important news of the day is usually placed in a newspaper (a) on page 1 (b) on the editorial page (c) on the final page.
9. Oscars are awarded in the movies

for (a) personal beauty (b) biggest sales (c) best acting.

10. The card catalogue in a library does NOT list (a) the author (b) the title of the book (c) a critic's views of the book.

"Eng. 8"

VI. *Library and Communication Arts*—Next to the numbers 1-10 on your answer paper, write the letter of the answer that correctly completes the statements below:

1. A current musical show based upon an ancient Greek myth is (a) Bells Are Ringing (b) Copper and Brass (c) My Fair Lady (d) Happy Hunting.
2. A play based upon a best-selling novel, which, in turn, was based upon an actual crime, is (a) West Side Story (b) A Visit to a Small Planet (c) The Iceman Cometh (d) Compulsion.
3. Which one of the following books is biographical? (a) Profiles In Courage (b) Letter from Peking (c) Domestic Relations (d) The Actress.
4. In a Sunday newspaper, articles of general interest are included in the (a) magazine section (b) book review section (c) monthly news summary (d) financial section.
5. The point of view of the publishers of our best newspapers is usually set forth (a) on the first pages of an issue (b) on the editorial page (c) in the society news (d) in the feature stories.
6. If there has been a violation of parliamentary procedure, a member may (a) rise to a point of order (b) propose an amendment (c) call for the previous question (d) move to table the motion.
7. An authoritative book on parliamentary procedure is (a) The Statesman's Year-Book (b) It's More Fun When You Know The Rules (c) This Way, Please (d) Robert's Rules of Order.
8. A magazine that usually contains information on etiquette is (a) Survey (b) Life (c) The Atlantic (d) Scholastic.
9. Reference books usually are distinguished from other library books in that they (a) may not be borrowed for home use (b) are never revised (c) are published only annually (d) are not listed in the card catalog.
10. The Dewey Decimal System arranges books on the shelves by (a) size (b) author (c) subject (d) publication date.

An analysis of the ten questions in each paper reveals that an attempt is made to sample the knowledge

about each of the five forms of mass media and library skills. Naturally, in a ten-point question, the number of samplings must be limited.

## HOW QUESTIONS ARE SELECTED

The tests for each grade of the Uniform Mid-Term Examinations are prepared by a committee of two or three teachers who are teaching this particular grade. They know the teaching requirements in each of the five mass media and library skills for this grade, and use their best judgment in selecting questions that would be as representative as possible. All examinations are submitted to the Chairman for final approval. It is his task to see that all questions are valid (not too easy nor too difficult), clearly expressed, not repetitious, and well distributed.

We use the multiple-choice form of questions because of the ease with which they can be corrected and because they can be answered within the short period of time allowed for this section of the test. The entire Uniform lasts for 75 minutes.

Here are some of the problems we face in developing test questions on the mass media:

1. Occasionally some outstanding TV production is found in several grades of examinations. For example, *Richard III* (Olivier) and *Twelfth Night* (Evans) were recommended to many classes and teachers wanted to test their students in several grades on the same information. I could see no objection to this practice.
2. The choices for each question must be carefully made lest the students can guess without having the knowledge.
3. Most of the questions at this stage of our evaluation test *acquisition of facts* only. We would like some day to test judgments of what is read or seen; and, better still, aesthetic appreciation. However, these types of testing are problematical in most areas; and for the moment we must be satisfied that our students know the facts.
4. We always have a few complaints from teachers who have not seen a particular play or TV show, but I do not recall a single complaint from any student or parent that we are expecting the impossible.

The two major purposes of any valid test are:

5. To determine to what extent the aims of the subject being tested are being realized.
6. To do something about the in-

struction if the tests demonstrate too low a degree of success in accomplishment.

I have left it to the individual teachers to evaluate their success in teaching the library skills and mass media in their respective classes and to correct their procedures when they feel this to be necessary. If there were time, I would make studies of the passing percentages for each item in each grade. Such statistics on a department-wide basis would probably lead to a more careful consideration of future questions and to possible revision of the syllabus.

## EFFECTS OF THIS QUESTION

There are certain noticeable results from having mass media questions on our Uniform Examinations, of which the following are worthy of mention:

1. Both students and teachers are made more aware of the need for being observant about the mass media. Since almost any valid question might be asked about current plays, movies, radio and TV, both students and teachers, I believe, are doing more observing than they might otherwise.
2. Recently in the New York State English Four Year Regents Examination there was a five-point question on the newspaper, on which our students did very well because they had studied newspapers for several terms and had passed test questions about them. We are constantly informed by students about questions which were given on various examinations for which they had been prepared because of their study of the mass media.
3. No student can graduate from our school without carrying away a fairly detailed picture of the importance of these media in their lives, an understanding of some of the criteria in evaluating them and considerable information of "big names" and tendencies.
4. By placing as much value in our examinations upon reading or spelling as upon the mass media, we as a Department show our attitude toward the important part these media play in educating today's children. We have given 20% to literature and 30% to composition in the same examination. We cannot, therefore, be charged with neglecting the 3 R's. Rather, we try to enforce and enrich, the teaching of the 3 R's by the broadening and stimulating qualities of the newer media of communication today.

(Continued from page 233)

is our classroom. We travel about just as often as we can—to the public library, local Red Cross office (where we help with community projects and gain work experience at the same time), YMCA, village hall, forestry department, fire department, restaurants, museums. One of the students takes his camera along, and as a result we have several sets of color slides with tape-recorded commentary describing our field trips. We use these to relive our trips, to review what we saw, to talk about things we did not have time to discuss during the trip. We use these also to show parents and community organizations some of the things we do at the Oak Community School and Workshop (in the workshop part of our program we make things to sell, do mailing jobs, perform community services of various kinds—and receive small wages for our work).

## It's Not All Good

Although we have used and continue to use a wide variety of audio-visual materials, the selection and use have not always been good—perhaps not even most of the time. And for the usual reasons—lack of planning, lack of time, lack of guidance in selection of appropriate materials, lack of readily available materials, lack of storage space.

There are many materials I look forward to using again and again—the Encyclopaedia Britannica films with correlated readers, for example. The use I've made so far of audio-visuals convinces me all special classes for the mentally retarded should be even more blessed with a variety of teaching materials than ordinary classes. From what I've seen and heard, I suspect that too often the special class gets things the last and the least.

There is great need for production of materials, especially reading materials, specifically for the retarded. There is great need for experimental, creative use of all kinds of teaching materials with the retarded. True, in these times of increasing emphasis on the "gifted" child, it seems unlikely that we shall soon see much greater attention to the needs of the retarded and the "average." Our aim must be, however, to give the best teaching, the best opportunity to *all* our young people.

With a wide variety of carefully selected teaching materials, a teacher can really face up to the challenge of helping our mentally handicapped youth, our so-called normal youth, and our gifted youth become all they are capable of becoming.

# "TEACHERS?"

"Teachers?" produced by Larry Dawson Productions, 617 Mission Street, San Francisco 5, California, 13 minute color sound film. Reviewed by James C. Stone, Director of Teacher Education, University of California and Stanley B. Brown, Head, Audio-Visual Education, University of California.

**I**N order for greater realism to be a part of a teacher education program, a new film "Teachers?" has been created and creatively used by members of the teacher education staff here at the University of California.

"Teachers?" is a 13 minute sound 16 mm color (or black and white) production which presents several unique concepts about teaching with considerable showmanship and provocation. Startingly different, it satirizes four types of teachers:

1. Miss Haggard, the "do as I say, not as I do" type,
2. Mrs. Bartlett, the efficient "we have to cover the material" type,
3. Miss Tomlinson, the sweet "I want to be liked" type, and
4. Miss Smith, the effective but "Audio-Visual sinner" type.

An example of a teacher "type via satire" that is forcefully presented for constructive interpretation in the novel film "Teachers," is Mrs. Bartlett, above, the efficient "we have to cover the material" type.

The portrayal of the four teachers is done by an accomplished performer who plays all the larger-than-life roles

in a satire that is done with rare skill. It is realistic enough for pre-service and in-service teachers to identify the characters and situations, but fantastic enough and far enough removed from reality to let teachers stop short of developing feelings of guilt or personal attachment. It is therefore, this unique quality that makes "Teachers?" provocative, challenging and stimulating. Within this context the teacher education film differs from other films by being more than a portrayal of

how or how not to teach—it holds before each teacher (viewer) a mirror of teaching, and asks, "is this you?"

This film is worthy of special consideration because of its novel approach in communicating. Yes—it provokes. Invariably it causes the complacent viewer to ask himself or others in the group such searching questions as—"Am I really like this teacher?" or "Well, what if I'd been Miss Tomlinson? . . ." Herein lies its unique flavor.

Here we have Miss Tomlinson, the sweet "I want to be liked" type.

Another interpretation is Mrs. Smith, the "efficient but Audio-Visual sinner" type.

# PHOTOPLAY STUDY GUIDE

## For the Discussion and Appreciation of THE KIRK DOUGLAS PRODUCTION THE VIKINGS

Released Through United Artists

Prepared by DONALD L. SMITH  
Teachers College  
Columbia University

General Editor WILLIAM LEWIN, Ph.D.

*Eric, unknown son of Ragnar, becomes rightful leader of his people.*

### SETTING AND THEME

BASED on Edison Marshall's best-selling novel, adapted by Dale Wasserman, with screenplay by Calder Willingham, *THE VIKINGS* documents the period in Norse history in which the Vikings, worshippers of Odin, the pagan God of War, attempted the conquest of England, which at that time was a series of small divided kingdoms. Played against this background is a narrative of stormy violence, as Eric, symbolizing the traditional hero of mythology, emerges from obscurity, to perform many deeds of daring, pre-destined to win warrior status and become rightful leader of his people.

### THE STORY OF THE PHOTOPLAY

The opening scenes of *THE VIKINGS* present a vivid introduction to the savagery and violence of the 9th-century Northmen. Ragnar (Ernest Borgnine), a Viking king, invades the coast of England and encounters an entourage of English royalty. The Vikings plunder and kill the surprised Englishmen with fanatical zeal.

In one of the tents Ragnar discovers King Edwin and his beautiful wife, Enid (Maxine Audley). He mortally wounds the king then attacks the terrified Queen.

Some months have passed and we see the coronation of ambitious Aella

### THE CAST

KIRK DOUGLAS	Einar
TONY CURTIS	Eric
ERNEST BORGNINE	Ragnar
JANET LEIGH	Morgana
James Donald	Egbert
Alexander Knox	Father Godwin
Frank Thring	Aella
Maxine Audley	Enid
Eileen Way	Kitala
Edric Connor	Sandpiper
Dandy Nichols	Bridget
Per Buckhoj	Bjorn
Harper Goff	Pigtails' Husband
Peter Capell	Rhodri
Marvin Miller	Narrator
Almut Berg	Pigtails

(Frank Thring), a distant relative of King Edwin, who has ascended to his throne in the absence of a direct heir. During the ceremonies Enid confides to her loyal friend Father Godwin (Alexander Knox) that she was attacked by Ragnar.

After the birth of a son, Enid is persuaded by Godwin to send the child away. When a nurse discovers that the infant has the royal pomelstone of the Sword Requirer secured about its neck, Godwin insists that the stone be removed for fear the child's true heritage will be revealed. Enid reluctantly agrees, but at the last moment she ties the pomelstone about the infant's neck and buries it in his clothes.

Some years later King Aella, in order to strengthen his defenses against the marauding Vikings, has arranged a marriage. The kingdoms of Wales and Northumbria will be united when Aella marries the beautiful Morgana (Janet Leigh), daughter of King Rhodri. This political marriage does not please Morgana, who despises Aella. Paying scant attention to this cold reception, Aella turns upon his cousin Lord Egbert (James Donald), and accuses him of espionage and further charges him with spreading false

*Vikings sweep over English entourage, killing with fanatical zeal.*

rumors about the late Enid's illegitimate off-spring. When Egbert refuses to deny these allegations, Aella orders him sent to prison.

Egbert, aided by Ragnar, is rescued from certain death and joins the Vikings as they prepare for a journey to Long Sound. Once there, he will draw maps of England's jagged shoreline to aid further invasions by the savage Northmen.

Ragnar is greeted at Long Sound by his son Einar (Kirk Douglas), who is instantly hostile to the sly Englishman, Egbert. While showing Egbert some traditional Viking customs, Einar encounters two slaves, Eric (Tony Curtis) and Sandpiper (Edric Connor), a mute. Eric is insolent to Einar, and this results in a bitter struggle between the two that comes to a violent ending. Eric, who has been felled by a vicious blow, orders his wild falcon to attack Einar. The bird's claws rip into Einar's countenance and in a fit of anguish the tortured Viking cuts himself free; but he is to remain disfigured and partially blind.

After a brief trial it is decided that Eric be cast into a pool to be eaten by huge rock crabs. Before Eric leaves, Egbert notices the royal pommel-stone that Eric wears around his neck. The Englishman suspects the meaning of this and pleads with Ragnar to let him keep Eric as a body servant if the latter manages to survive the ordeal of the pool.

Kitala (Eileen Way), a friendly seer, prays for a miracle. Eric survives, only to be claimed by Egbert. Einar is enraged at this turn of events, but restrains his anger, as he is soon sent by Ragnar and Egbert to capture Morgana, who is enroute home from her first meeting with Aella. Einar succeeds in kidnapping Morgana, but fails in an attempt to win her affection. Upon his return to Long Sound, Einar places Morgana under guard

and withdraws to his father's castle, brooding over his failure to conquer the lovely princess.

Later, Einar returns in a drunken rage, and lunges at Morgana. Eric, who had witnessed the earlier rebuff, appears, knocks Einar unconscious, and persuades Morgana to escape to England. When Einar and Ragnar discover the departure, they pursue Eric

#### WHAT DO YOU THINK?

*Our publication of this Photoplay Study Guide is experimental. Such Guides are not entirely new to readers of Educational SCREEN & Audio-Visual Guide, however, since they were a regular feature of Audio Visual Guide when it was a separate publication. And — although we have not included them since the consolidation of the two magazines, we have had several requests for them and the present publishing of this Guide is in the nature of a survey. We would like to have readers' reaction to the experiment. Would you or would you not, like to see Photoplay Guides appear as a feature of Educational Screen? Please let us hear from you.*

and his party, but they are frustrated when fog, the great fear of all Northmen, envelopes them. Eric is able to guide his vessel through the mist, for Sandpiper has a metal device which serves as a compass.

That night as they successfully hide from the Vikings, Eric and Morgana discover they are in love and Eric gives her his pommel-stone. The next morning the Vikings draw close to Eric, but he manages to elude them and causes Ragnar to crash into the jagged rocks. Eric saves Ragnar and proceeds to England with a plan to deliver the warrior into the hands of Aella in exchange for Morgana's hand.

Aella pretends to agree to this proposition and asks Father Godwin to escort Morgana to the Chapel. On the way, Father Godwin discovers the pommel-stone and explains its significance to her.

Ragnar's death is imminent, as Aella orders him thrown into the wolf-pit. Eric gives Ragnar his sword that the Viking chief may die honorably, weapon in hand. Aella is infuriated and orders Eric to be thrown to the wolves also. Only the intercession of Morgana saves him, but, as punishment, Aella severs Eric's hand and orders him cast adrift at sea.

In the meantime, Einar has unsuccessfully attempted to arouse the Vikings to avenge his father's death. When Einar's spirits are at their lowest ebb, Eric miraculously appears and tells Einar all that has transpired. Even though the two men hate each other, they agree to lead the Vikings to Aella's castle in England, capture Morgana, and avenge Ragnar's death.

The final scenes of the photoplay are devoted to the invasion and the fierce, hand-to-hand fighting that comes to an exciting climax as the Vikings overcome tremendous obstacles and vanquish the hapless Englishmen. Einar reaches Morgana first and proclaims his love for her, but she again refuses him. When he says he is going to kill Eric, Morgana bares the secret: Einar and Eric are brothers. But Einar cannot believe this to be true.

Eric appears and the two brothers engage in a wild fight. As Einar is about to deliver a mortal blow to Eric, he pauses, shocked by the thought that Eric may indeed be his brother. In that moment Eric stabs Einar and he falls. With his dying breath Einar begs Morgana to tell Eric nothing; to Eric he utters, "As my blood runs out, my hate runs out too."

As the photoplay ends we see Einar's funeral ship sailing to Valhalla in a sheet of flame, as Eric and Morgana stand together, looking out to sea.

#### CHARACTER SKETCHES

RAGNAR is a huge, rough, and uncouth Viking king, with a gruesome sense of humor. He hates the English and seizes every opportunity to lead his savage band of warriors to plunder the coast of England. Despite his unfeeling cruelty, Ragnar does display considerable pride in his son, Einar.

EINAR is a man of intense passions; he is vain, powerful, and relentless in pursuit of his objectives. His searing hatred for his brother, Eric, tears him apart with rage and vengeance; his brave, swaggering demeanor is destroyed by Eric's falcon.

This alters his personality and way of life.

ERIC, the strong, fearless falcon-boy, is the traditional hero drawn from universal mythology. His fate has been pre-determined; he must return from exile as a slave and emerge ultimately as a Viking warrior and rightful successor to the throne in England. Eric's great love for Morgana and deep hatred for Einar motivate his heroic actions.

MORGANA, the beautiful daughter of King Rhodri, is torn between her promise to marry Aella and her strange love for the slave, Eric. She is mysteriously drawn to Einar and almost yields to his savage advances. She is at the apex of a love triangle involving the two brothers.

LORD EGBERT, the sly, lean, English traitor, is trusted by no one. He is valuable to the Vikings, but plans to use Eric in a plot to overthrow Aella and make himself subject king. He is cautious not to upset the Vikings, but is hated by them just the same.

AELLA, the cold-hearted ruler of Northumbria, ascends to the throne upon King Edwin's untimely death. He is pompous, ruthless, and has no compassion for humanity. He is sardonic, dishonest, cowardly, and weak; his hatred and fear of the Vikings is matched only by their similar savagery.

#### DISCUSSION AND ACTIVITY GUIDE

1. Explain the particular significance of the pommel-stone. When does it first appear? How did Queen Enid deceive Father Godwin? Why did she do it?
2. Why did Aella arrange to marry

*Viking ships land on English soil to avenge Ragnar's death and re-capture Morgana.*

Morgana? What were Morgana's feelings toward Aella? How would you feel in a situation like this? To whom does a girl owe her first loyalty and allegiance?

3. What traitorous acts did Lord Egbert commit? In what ways did he help the Vikings? Why did the Vikings need his services?

4. What were some of the superstitions of the Northmen? What are some of our superstitions about the sea? Do you have a pet superstition? Are superstitions good or bad? Why?

5. Describe some of the unusual customs of the Vikings.

6. When Eric appears, how is his identity revealed? Describe the series of events that led to his becoming Egbert's slave.

7. Explain why Eric and Einar hate each other. Can you think of other cases where brothers or relatives have hated each other so intensely? What

causes hatred in people? What groups in the world today spread hatred? How can we combat this hatred?

8. Describe how Einar kidnaps Morgana. Why was Einar sent out to accomplish this deed?

9. What are Morgana's reactions to Einar? When does Einar become aware of his disfigured face? Was Morgana attracted or terrified by Einar? Why?

10. Give reasons why Egbert was interested in building a ship.

11. What happened the first time Morgana and Eric met?

12. Describe how Eric rescued Morgana from Einar.

13. Explain how Eric was able to elude the Vikings and why they could not follow him. Why was fog the great fear of all Vikings?

14. What obstacles prevented an ideal romance between Eric and Morgana?

15. What plan did Eric evolve to secure Morgana's release from betrothal to Aella? Why did the plan fail? Why was Ragnar's death an honorable one?

16. Why was Einar unable to rouse his men to avenge Ragnar's death?

17. What strange custom did the Vikings perform before going into battle?

18. Describe the final battle. What impressed you most? Are battles fought in this way in the modern world?

19. How does Morgana discover Eric's true identity? Why does she tell Einar? Why did the story end the way it did? Could you justify another kind of conclusion?

20. Were the Vikings adventurers or plunderers or both? Do we have modern-day "Vikings"? Explain.

21. Read *Vagrant Viking*, by Peter Freuchen. Does the title adequately describe Freuchen? What kind of a man was he? What were some of his accomplishments?

*Ragnar and Einar celebrate the capture of Morgana, the Welsh princess.*

22. Consult *The Viking Age*, by Paul B. DuChaillu. Describe the significance of Odin, God of War, in the lives of the Vikings. Why was Valhalla important to the Northmen? How did Vikings gain entrance to Valhalla?

23. Consult the article on Vikings in the *Encyclopaedia Britannica*, Vol. 23. Write a description of a Viking ship ready for battle. Illustrate your work with a simple drawing or model.

24. Using *Leif Eriksson, Discoverer of America*, by Edward F. Gray, or any other reference work, write a brief account of one of the early Northmen's voyages to North America. On an outline map trace the route of this voyage.

25. Describe the main characters in the film. Do the actors make these characters real to the viewer? Why do you think that Kirk Douglas chose to portray Einar, when Eric is the real hero?

### THE PRODUCTION

#### LOCATIONS

Producer Jerry Bresler, along with Director Richard Fleischer and Art Director Harper Goff, first traveled to Norway to scout locations in September, 1956. They viewed the many picturesque fjords and snow-clad moun-

tains along the Norwegian coast from a low-flying seaplane and finally settled on the Hardangerfjord for its superb photographic possibilities. This area was an actual base of Viking operations eleven centuries ago.

From Norway the company traveled to Dinard, France, where additional action exteriors were filmed along the Brittany coastline. Scenes representing a Viking raid on a Northumbrian Castle in England were filmed at famous Fort LaLette, built in the 10th century. The fort is one of the most picturesque in the world. A drawbridge over a drop of nearly 100 feet leads to an inner court from which the central keep is entered through a second drawbridge. For the castle-storming sequences, a gigantic battering ram was fabricated from the trunk of a huge tree. Weighing over 8,000 pounds, this ram was pushed from the sea on great wooden wheels, ultimately to be sent crashing into the wooden drawbridge of the castle. The castle itself, actually built toward the end of the Viking age, had to be somewhat altered to conform to 9th-century design.

#### THE VIKING FLEET

The Viking ships, authentic reproductions of the Viking vessels of the 9th century, were built in Bergen, Norway, by Askvik & Sons, shipbuilders. The unique and colorful dragon heads that surmount the prow of each boat were carved by Jacob Hjelle, a Bergen woodcarver. The vessels are from 65 to 78 feet in length, and are completely seaworthy in every respect. Ragnar's ship, the biggest of the Viking fleet, is an exact replica of the Gokstad ship (1,000 years old) in the Oslo Viking Museum.

The Vikings, 163 in number, were recruited for the picture several months in advance of filming to permit them to grow full, luxuriant beards. Shortly thereafter this group commenced training, rowing heavy whaleboats, so that they could perfect a style similar to that used by the early Vikings. The training was supervised by Erik Kiersgaard, one of Scandinavia's leading oarsmen, who sailed a Viking memorial ship to England some years ago. The men in the group included both Danes and Norwegians. They represent every walk of life and occupation from doctors to firemen, with one thing in common—all of them are expert oarsmen. Rowing is one of Scandinavia's traditional sports, and it is not uncommon to hear the phrase "born to the oars" in connection with a young Norwegian or Dane.

#### THE MOVIE-MAKERS

Producer Jerry Bresler has made over 300 pictures and thrice won Academy Awards during his tenure as head of the Shorts Department at M-G-M. His most successful pictures include *Act of Murder*, *Another Part of the Forest*, *The Mob*, *Flying Missile*, and *Singapore*.

Director Richard Fleischer made the Walt Disney production, *20,000 Leagues Under the Sea*. His other credits include *Between Heaven and Hell*, *The Happy Time*, *Bandido*, and *Design for Death*, a documentary for which he won an Academy Award.

One of the world's greatest color cinematographers, London's Jack Cardiff, photographed the production. Cardiff's is the magic hand which recorded such films as *Red Shoes*, *The African Queen*, *Black Narcissus* and the monumental *War and Peace*, for which he won an Academy Award.

The picture is in Technirama, a new color process developed by Technicolor, which combines the virtues of CinemaScope and VistaVision and may also be shown in a wide-screen form similar to Todd-AO.

#### REPRINTS AVAILABLE

**Editor's Note:** Reprints of this guide to the discussion of the screen version of *The Vikings* as a 16-page booklet may be ordered from Publication Press, 4804 East Ninth St., Kansas City 24, Mo., at the following rates: 5,000 lots, 5c a copy; 2,500 lots, 6c a copy; 1,000 lots, 7c a copy; 500 lots, 8c a copy; 100 lots, 9c a copy; 50 lots, 15c a copy. For single copies, send 30c in stamps to Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. Subscription rate, ten issues a year, \$3; two years, \$5; foreign countries, \$1 extra for each order or subscription in American funds.

Morgana, revealing Einar's kinship to Eric, begs Einar not to slay his brother.

# How to make your A-V budget buy MORE PROJECTORS

The new Kodak Pageant Sound Projector, Model AV-085, is a 1958 machine that rolls prices back to 1955 levels. It lists for only \$439!\*

In simple terms, it means you can buy *more 16mm sound projectors* on a given budget without sacrificing picture or sound quality. Or, pay less for a single machine and have money left over for other purposes.

*Many "high-priced" features*—The AV-085 is a first-line machine in every sense. Sound reproduction is clear, natural, resonant. The exclusive Kodak Super-40 Shutter provides a brilliant screen image that's sharp from edge to edge. Its operating quietness makes it an ideal projector for classroom and small-room shows.

Ask your Kodak audio-visual dealer to demonstrate the new Kodak Pageant AV-085 soon. Even if you don't plan to invest in more projectors immediately, it's a machine you should know about.

Meanwhile, the pictures and captions show some of the many reasons why the AV-085 is a remarkable buy. And Bulletin V3-22, yours for the writing, gives full details. No obligation, of course.

*\*List price subject to change without notice.*

1. More projectors for your A-V dollars. New Pageant Sound Projector, Model AV-085, is budget-priced, yet has regular Pageant features: folding reel arms, attached belts, Kodak Super-40 Shutter for brilliant screen image, taking 750 or 1000-watt lamps.

**EASTMAN KODAK COMPANY**  
Dept. 8-V, Rochester 4, N. Y.

2. Natural sound, good bass response with new 11-inch aural speaker in baffled enclosure. The Pageant's powerful, sensitive 8-watt amplifier provides clear, resonant sound reproduction.

3. To meet all electrical codes, AV-085 has new 3-wire power cord, adapter for 2-wire outlets.

4. All Pageants are lubricated for life to insure long, trouble-free operation. Another long-life feature is the virtually wearproof pulldown tooth of tungsten carbide.

## THE HUMAN BODY: DIGESTIVE SYSTEM

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 14 minutes, 16mm, sound, color or black and white, 1958. \$125 or \$68.75. Teacher's guide available.

### Description

This film first defines digestion then by animated drawings, X-ray photography, and actual photography shows the parts of the digestive system and tells of the digestive juices which break down complex foods into usable, simpler forms.

It opens by showing drawings of William Beaumont and Claude Bernard and telling that they were among the first to discover the workings of the digestive system. The film then shows by drawings and labels the parts of the digestive system and the digestive juice secretions. It continues by examining the function of each part in detail.

First, by X-ray photography, the film shows mastication of the food and the swallowing mechanism as it tells that the starches are broken down into simpler foods by the saliva secreted by the three pairs of salivary glands. It also shows mastication and swallowing in a cutaway drawing and pictures the results of adding saliva to a dyed starch solution in a beaker.

The film continues by using animated drawings to show how the food is moved down the esophagus by peristaltic wave action. Then it shows the stomach of a living animal as it churns by action of the peristaltic waves. Next, drawings and X-ray photography show what happens to the food in the stomach; namely, the action of the gastric juice on the food particles, their reduction to the semi-liquid chyme, and the forcing of the

chyme from the stomach into the small intestine.

The alternate movements of hands on an elongated inflated balloon are then used to portray the peristaltic action of the small intestine. The film also shows the intestines of a living animal which are in motion of peristalsis. Then by animated drawings it shows the mixing of the food in the small intestine as it tells of the pancreatic juice secreted by the pancreas, the bile secreted by the liver and stored in the gall-bladder and the intestinal juices. Drawings which show a magnified view of the intestinal wall reveal the villi as the film tells of their importance in absorption of the digested food so that it can be distributed to all parts of the body. It then explains that undigested materials are stored in the large intestine until eliminated.

In summary, the film re-emphasizes the main points concerning the functioning of the digestive system and tells that knowing about the digestive system is important for maintaining good health.

### Evaluation

This is a clear, interesting, accurate, and educationally valuable presentation of important facts concerning the major digestive organs and their functions. Especially commendable is the complementary use of animated drawings, X-ray photography, and the photography of actual digestive organs of living animals. The drawings clearly show certain information; however, the X-ray and actual photography reinforce the presentation of the drawings and increase interest and personal involvement by adding realism to the film. The repetition of certain facts with different visuals re-emphasizes the important points and, in addition, provides "breathers" for collection of thoughts before proceeding to new material. Both the mechanical and chemical aspects of digestion are treated with enough details to make the film most useful in senior high school biology and health courses but also college biology, health, and medical instructors will find it profitable for providing background for more detailed study. Many junior high school general science teachers will also find *Human*

*Body: Digestive System* educationally helpful.

— George Vuke

## EL CUMPLEAÑOS DE PEPITA

(International Film Bureau, Inc., 57 East Jackson Boulevard, Chicago 4, Illinois) 16 minutes, 16mm, sound, color, 1957. \$150. Spanish Film Guide-book, 24 pages, illustrated, \$.69 a copy.

### Description

Events connected with a Mexican girl's birthday celebration, an accompanying narration in Spanish, and a Spanish musical background are combined in *El Cumpleaños De Pepita*.

The film begins with the presentation of a relief map of the Republic of Mexico showing its relationship to the United States and the relative location of Mexico City, the capital of Mexico. A pan across Mexico City gives a glimpse of its many modern buildings and precedes a return to the map for the location of Patzcuaro, a city surrounded by mountains but only a short distance from Morelia, the capital of the Mexican state of Michoacan.

Pepita, a Mexican girl, joyfully waves good-by to her mother as she turns to walk with her father along one of the narrow cobblestone streets of Patzcuaro. Many adobe houses with red tiled roofs are on each side of the busy street. Other people, also wearing brightly colored clothing, are passing or standing in the windows of their homes. Pepita pauses once to put her arms fondly around the neck of one of the burros loaded with merchandise. Pepita and her father board a small boat and are rowed through a narrow channel to the Lake Patzcuaro.

A translation of the Spanish narration explains that today is Pepita's birthday. Her father is carrying out a promise to take her to the nearby island of Janitzio. The narrator also explains that the Tarascan Indians, inhabitants of the island, are mostly fishermen and that the island itself is located in Lake Patzcuaro which has the crater of an extinct volcano as a bed. After Pepita and her father pass two fishermen who lower and raise their nets shaped like huge butterflies, they land on the island and begin a sight-seeing tour. Flashback scenes show

many activities that are in progress in Pepita's home.

Each person is busy. Two girls are cutting paper to use in decorating the walls of the courtyard; Pepita's grandmother is trying to finish embroidering a shawl; and Pepita's mother is putting fruit and candy in a gaily decorated clay pinata that is formed like a donkey. The shape was chosen because Pepita is so fond of the little burros of Mexico. Soon the pinata is suspended above the patio. Friends and neighbors arrive. Everyone dashes to hide when Pedro announces that his sister and father are returning. Pepita is surprised by the decorations and the sudden appearance of friends. Singing of the traditional birthday song, "Las Mananitas," begins the activities.

A few scenes later the film shows the pinata being struck by a long pole wielded in turn by two blindfolded boys. Pedro finally succeeds in breaking it. The children scramble for the fruit and candy. Pepita's sorrow over her broken little clay burro is forgotten when Pedro leads into the patio a birthday present for Pepita, a very young burro for her very own.

#### Evaluation

Planned for advanced first-semester or beginning second-semester students in first-year Spanish, *El Cumpleanos De Pepita* combines several factors that will increase the student's understand-

ing of the Spanish language. Anticipation and excitement of a birthday celebration is of interest and within the understanding of every one in any language. In interspersing the scenes of preparation for the surprise party with the scenes of Pepita as she is on the island, the film encourages the viewers to share the suspense and excitement. The style of narration is direct and simple using common everyday words. With the narrator enunciating the words clearly, correctly, and slowly so that students can assimilate what is being said, the film provides a supplementary experience for students to listen with understanding to spoken Spanish and encourages them to improve their own pronunciation and manner of speaking. The many pauses in narration give the slower students additional time to translate or interpret the story from the combination of visuals and narration and gives all the students more time to enjoy the scenery and musical background. The guidebook, prepared by Dr. Carlos Castillo from the University of Chicago to accompany the film, suggests that teachers may wish to comment in Spanish during the pauses. The visuals themselves are interesting, colorful, and a definite aid in understanding the story. Elementary students studying Mexico would be interested in seeing this film for its visual content even though they would not neces-

sarily understand the narration or they may see the same content with an English narration available from the International Film Bureau, Inc. under the title, *Pepita's Surprise*. In addition to suggesting uses of the film for teachers the guidebook is complete enough to be used as a supplementary classroom reader. It contains the complete text of the film in Spanish with marginal notes to help the students, lists of questions, phrases, and words to be translated, and sentences to be completed. Other materials, also related to the film, include pictures with Spanish captions, the words and music for the birthday song, "Las Mananitas," and a brief Spanish-English vocabulary.

—Margie Gonca

### CHAUCER'S ENGLAND

with a Special Presentation of  
The Pardoner's Tale

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 30 minutes, 16mm, sound, color or black and white, 1958. \$390 or \$195. Teacher's guide available.

#### Description

This dramatized film version of one of Chaucer's Canterbury Tales, the classic and widely read "Pardoner's Tale," not only chronicles this particular tale but also shows the fourteenth century English pilgrims as they approach the Tabard Inn, their informal

## What "creative quality" means in Coronet Films

### OUR FINGER ON EVERY PHASE OF FILM PRODUCTION

The principal objective of Coronet Films, nearly twenty years ago, was to establish the highest standard of educational effectiveness. This required the building of the first studio devoted exclusively to producing classroom films. In the years which followed, it meant retaining *within the Coronet organization* the control of every step of film making, from the initial idea to the finished motion picture.

Coronet Films assembled a permanent staff of research specialists and script writers who were skilled in working as a unit with educational collaborators and the production staff. There were also competent producers, directors

and cameramen to translate the scripts to living stories on the screen. Careful editing followed, to produce the reality for which Coronet films are famous.

Coronet's new catalogue offers 781 outstanding motion pictures, produced completely under Coronet supervision — insuring the most comprehensive, balanced, and closely correlated selection of educational films available in the world.

Examine these 16mm sound motion pictures for your own teaching and school needs. Use the coupon to request your free copy of a fully descriptive catalogue—with information on how you may preview, purchase or rent Coronet films in either color or black-and-white.

INFORMATION BUREAU

630 Fifth Avenue, New York 20, N.Y.

Illustrated printed material also available.

reception by the Host of the Tabard, and their varying reactions to the Pardoner's attempt to sell them pardons at the conclusion of his tale.

Beginning with the original Middle English Chaucer text, "Whan that Aprill with his shoures sote," and close-up shots of spring flowers, spring showers, spring birds' songs, and spring-filled brooks, the opening sequence establishes the time of year, identifies the group of twenty-nine persons as pilgrims on their way to the shrine of Thomas a Becket at Canterbury, introduces some of the individual pilgrims — the Knight, the Wife of Bath, the Miller, and the Pardoner — and brings them into the Tabard Inn for an overnight stop on their pilgrimage.

The Host's welcome leads to the group's asking the Pardoner for a story. After extolling quite unashamedly his own eloquence as an orator, the Pardoner begins his story with the scene of the Inn fading out and the interior of a littered and dusty tavern with rats scurrying about, three gamblers rolling dice, and the innkeeper and servant asleep fading in.

The three gamblers, hearing the bell toll another funeral and realizing that Death is taking many these days (the Black Death was raging over Europe), swear in their drunken frenzy to slay Death. They encounter an Old Man whom they accuse of being Death but he directs them to the foot of an oak tree. Here they discover a great treasure of golden florins and as each covertly plans how he can gain it all for himself, he plans with the others on how they can remove it and divide it equally. By drawing lots it is decided that the youngest go to town to get bread and wine to celebrate the finding of so much wealth. While he is gone, the other two decide when he returns to engage him in wrestling for the purpose of stabbing him. The younger one poisons the wine which he decides not to drink so that the other two will die and he will be the sole survivor and possessor of the wealth. The tale, of course, ends with a fade-out of the scene showing the three gamblers dead and a fade-in of the pilgrims in the inn.

The Pardoner points out the moral of the tale, "the root of all evil is avarice," and tries to sell the pilgrims his religious "relics" and forgiveness for their sins. A strained atmosphere develops as the Host denounces the Pardoner, but the Knight makes peace for all. The pilgrims plan to continue their pilgrimage and their stories.

### Appraisal

High school and college English literature classes, junior and senior high school social studies classes, and adult

groups interested in Chaucer's *Canterbury Tales* or fourteenth century English life should find that this film adds a dimension of realism to their study and discussions. Filmed in England, shots of the English countryside, the spires of Canterbury Cathedral, stained glass cathedral windows, and illuminated manuscripts provide groups with valuable experiences related to understanding the *Tales* and life in England. The evaluating committee feels that here is a film in which all the parts are sensitively blended to create a most satisfying overall effect. They highly recommend the film for use and believe that all interested groups will agree that its cultural values stem from the producer's remarkable artistry and authenticity in handling a significant subject and era. The inclusion of some of Chaucer's original text is commendable, but the shift to Theodore Morrison's translation allows the audience to relax from strenuously concentrating on the language and attend to other matters. In either color or black and white, the film should find many appreciative and satisfied audiences.

## HIGH SCHOOL PROM

(Coronet Instructional Films, Coronet Building, Chicago 1, Illinois) 16 minutes, 16mm, sound, color or black and white, 1958. \$150 or \$82.50. Teacher's guide available.

### Description

The film portrays realistically evidence of thorough group planning and action; the working out of personal problems relating to dates, clothes, and etiquette; and the highlights of a series of happy and memorable events characteristic of a successful *High School Prom*.

A New Consumer Information Film —

## "AS CONSUMERS WE'RE OWNERS"

- Why are more U. S. and Canadian consumers owning the supermarkets in which they shop?
- What are the advantages of ownership and control by the customers?
- This new film answers many questions as member Edith Norton's guest, Florence Patterson, learns about cooperation during an exploratory shopping center visit.
- Useful for high schools, colleges, unions, clubs, cooperatives, television.

16mm., color, sound film. 13½ min.  
Rental, \$5.00

## Whither Biblical Films?

Using these terms in the broadest sense, are biblical films getting better or worse? By biblical film we mean a film that deals directly with biblical material. *The Book of Ruth*, by Crusader Films, is of this type. Cathedral Films, Inc. has produced many: the St. Paul Series, the Living Christ Series, and many others. In these films we find biblical events pictured and interpreted in historic terms. In them the context and content is biblical. These films differ markedly from the film that puts biblical contexts in a modern setting. *This My Son* (Family) is such a film. It puts the biblical Samaritan story in modern times and dress. *Road To Jericho* (Family) is another such film.

Both types above are religious films, to be sure, but there is a vast difference in their form and in the treatment of content. It is the strictly biblical film which we wish to ask some questions about.

Putting it bluntly, why are biblical films getting worse now that the denominations themselves have begun to produce them? Why is it that we do not find biblical films better now in general qualities than they were some ten years ago? This is an important question for the church to answer.

To my knowledge, the Southern Baptists were the first of the main-line denominations to undertake the production of biblical films. I refer to "Book of Acts Series" of ten films released in the summer and fall of 1957. Here a great church had a concern produce biblical films which bore the content and characteristics which it wanted these films to have. The producer was in this enterprise, but the agent of the church. He cannot be held responsible for the religious and cinematic qualities of these films. This responsibility belongs to the Southern Baptists.

With the advent of this series of films two significant things happened. First, the church itself entered the field of filmic biblical interpretation, offering its film version of biblical ma-

terial to the general church public. Secondly, the quality of biblical films, in both content and treatment and technical aspects, dropped several notches.

Lest there be some misunderstanding, let me say right here that this lowering of content and technical quality can't be laid at the door of the producing concern. They have demonstrated time and time again their ability to achieve excellence in both areas, and in this instance gave the client (church) just what it asked for, wanted, and paid for.

Now, another great denomination has entered the field of biblical film production. I refer to the Missouri Lutheran's (Concordia Films) series, "The Old Testament Scriptures." They call this "a series of fourteen bible teaching films." After previewing four titles in this series — *Abraham, Man of Faith*; *Jacob, Bearer of the Promise*; *Joshua, The Conqueror*; and, *Gideon, The Liberator* — I am of the painful conviction that the standards for content treatment and technical excellence have been dropped another notch.

A few years, or even a decade ago, the independent producer was held up to some pretty high standards by the churches. He was supposed to be a biblical scholar as well as a film craftsman. Well do many of us remember when James K. Friedrich, a great pioneer in this field, presented his *Queen Esther* before the Green Lake Workshop — was it in 1947? Having invested a fortune in this film, and having produced one of the finest religious films to date, he was taken to task by quite a few clerics and denominational executives because the quality was not high enough. It is my opinion that the inherent quality of this biblical film has not been reached by any other biblical film. Some pretty high standards were set, also, in Cathedral's first four films in its "Living Christ" series. Who has topped these? I can think of only one film that comes close — J. Arthur Rank's biblical film *Ruth*. Here is a film that treats, not mis-treats, biblical material. Here

is a film, produced some ten years ago, with cinematic polish and general excellence far surpassing this crop of film-nubbins lately turned out by the Baptists and the Lutherans.

If you want to see how far we have *not* come in ten years, just put on your projector any film from the "Book of Acts" series and follow it with such a film as *The Grace of Forgiveness* from the British St. Paul series. In costuming, casting, acting, directing, biblical interpretation, in character portrayal — right across the board — there is no comparison with the clumsy superficialities, crude literalisms, and spirit-killing externalisms of such films as Concordia's *Gideon* or Broadman Films' *Light From Heaven*.

In the production of biblical films we have not only turned a corner but the path we travel is sloping downward, not up. Why should this be? Do we lack scholars in the churches? Do we lack taste? Do we have one standard when we eat out and another when we cook for ourselves? How can great denominations produce for themselves, and for export, biblical films that show little or no comprehension of the artistic requirements which biblical material imposes on all who would transpose this sacred material from words to images? Can it be that we don't mind tramping around all over this holy ground in the heavy boots of indifference or ignorance? Have we no pride, to put it on very low terms?

It is one thing for a communion to produce biblical films for its own domestic market and quite another to produce for the church field at large. If the Baptists and the Lutherans wish to settle for crude literalism, externalism, and spirit-crushing absurdities in biblical films for themselves, we might be constrained to withhold criticism and keep our peace. But, such is not the case. These films are being promoted on the 'foreign' as well as the domestic market. This being the situation, they will have to stand up and be counted.

In closing, and in special reference to the four titles of the Concordia series which I have studied, suppose we accept the content treatment of the films as being just what the client wanted, what then of technical qualities? We have poor pageantry in them, not film drama. They have the flat and one-dimensional character of poor rather than inspired pageantry.

In casting, costuming, and acting there is just one word that covers them adequately—mediocre. And not only that, they have a certain corny and phony character which almost amuses—if it were not biblical material which was being so mistreated. The Three Heaven-Sent Strangers who appear to Abraham and Sarah—how awful! That Stranger from Heaven which appears to Gideon, how hammy! There is no art here; no art. I tell you in dealing with the Scriptures! Yet, material like this can be treated artistically and reverently if the hand that touches it is skilled and the mind that understands it is inspired. Must we turn back ten years to find such films? This reviewer is certain of one thing, we must go back beyond that corner we turned in late 1957.

### Three Good Films

Good, yes; and useful too. But that's the way it ought to be. A good film is good for something. Inherent quality is tightly linked to utility, as a rule. But let's get on to cases!

When a new boy, with some rough edges, shows up in the neighborhood he is accepted by several slightly younger boys who seem to come under his influence. Told to leave him alone, these boys simply can't—they need him on their ball team. Now the adults get into the act, and the story soon takes a delightful turn, few if any will anticipate, and *First Impressions* comes to a wonderful conclusion. Here is a film for the church school, for summer camps, for family camps, and a lot of other places in and out of church. It would be tops at school.

It's been a rainy day. Over and over these two brothers have been getting into squabbles and fights. Mother has had it pretty rough. Pop comes home, tosses his coat aside, sniffs in the direction of the kitchen and asks Mom what sort of a day *she* has had. About that time Pop finds out. Mom suggests that he straighten out *his* sons! Nothing to it! All one needs is patience, understanding, and some other stuff. Watch me! And that is just what we see Mom do. But, Pop comes through—thanks to a brainstorm at just the right minute. He finds that *Half-Inch of Selfishness* can cause several yards of trouble.

# SYLVANIA CERAMIC BLUE TOP

## PROJECTION LAMPS... for all makes . . . all types . . . in all sizes

Use a Sylvania Ceramic Blue Top in your projector . . . your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector . . . to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter** . . . Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops . . . machine-made filaments assure pictures bright as life.

**Cooler** . . . Ceramic Blue Top is bonded to the glass for improved heat dissipation . . . cooler operation assures longer lamp life.

**Longer Lasting** . . . Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

To see this film is to enjoy it. To enjoy it is to want others to see and use it. Parents will get a powerful kick out of it. So will children and parents together; and, children (Primary and up) will enjoy it and get the point, too.

*Spending Money* is the story of two little girls; of two families; of two ways of living; of two attitudes toward money. Both seem natural. One family uses money to get happiness; the other family uses money. This means two different philosophies of allowances for children. When a ten-year-old girl gets pulled off her money-orbit by her new friend, things get complicated and pretty painful. But, in the end things come around pretty well, and constructive attitudes are validated. Here is an excellent film on money for children to see alone, for them to see with their parents, and for parents to see alone.

In all three films the casting is excellent. The acting is of top quality, and the directing competent. They are neat packages! The message comes through, but it is not in preachments. It is never imposed. It is right out of the situations themselves. They are true to life, and right out of it come the moral force and rich truth of these films.

These films have high utility. Children can be taught by just the mere showing of these films. They can learn more if the teacher will *use* the films. Parents can learn from them, also. What I like about them is that the positive, not the negative, is accentuated. It's done without any stumbling and humbling. Parents can see parents going about the complicated job of being parents as they ought to. They do things the right way, yet they are under the same tension and stress as

all parents experience.

These films have good technical qualities. You can see, and you can hear, and you like the fine color you see and the things you hear. There is enjoyment in these films, but it is just the extra dividend which always comes when a good job has been done. (Produced by Family Films, Inc., inquire of your film library; or write to FF, 5823 Santa Monica Blvd., Hollywood 38, Calif.)

### Literacy Filmstrips

Without comments on their inherent filmstrip quality, nor estimates of their worth in your program, I would like to draw your attention to six filmstrips, all in color, available from the Committee on World Literacy and Christian Literature (156 Fifth Ave., N. Y. 10), either on a sale or rental basis. The rental on each is \$2.50 and the sale price and length will be given as each title is briefly described below. There is a reading script for each.

*Thailand Finds The Way*—The Thai people, the picturesque temples, scenery and customs, and views of mission literacy work. (60 frames; \$6.00.)

*Literacy Comes To New Guinea*—The natives, their customs and country, and how they are brought to Christianity. (60 frames; \$6.00.)

*Literacy Unlocking The Bible*—Views from many places over the world showing how illiterate people find God through learning to read His Word. (53 frames; \$7.25.)

*Literacy Opening Blind Eyes*—History of the each-one-teach-one; how it works; how it helps people find a better life; educational emphasis. (58 frames; \$7.25.)

*The Story of Anand*—How a young Indian learned to read; how others were touched; close up of Hindi charts; literacy team at work in India. (78 frames; rental only, \$2.50.)

*Africa Goes To School*—What has happened in some areas such as Angola, Congo, Camerouns since the Literacy Team was there in 1950. Views of medical and agricultural work. (84 frames; rental only, \$2.50.)

There is a 20-minute color motion picture in which Dr. Laubach tells of the work of a Literacy Team in a village of North India. (Rental \$10.00.)

## Foster Parents

*Francesca* tells the story of two children, living in a village some 30 miles from Rome, who were "adopted" through the Foster Parents Plan, an international children relief organization which has helped more than 76,000 war-scarred and distressed children over the past 20 years. Documentary; 28 minutes; B&W; informative and revealing; and "free" from Association Films, Inc., Ridgefield, N. Y. Not recommended for use below the 10th grade. Excellent for adult groups and clubs in and out of church. Good technical qualities. Recommended to interpret the work of FPP and to motivate the support of overseas missions and humanitarian work.

## A Remarkable Film

For some time I have wanted to see the 22-minute B&W film, *The Face of Lincoln*. Now I have. This is a film you experience. It is one of the most moving and remarkable films I have been privileged to see. There is a great idea back of it; and there is fine cinematic art in its production. The Cinema Department of the University of Southern California has already been congratulated and praised for this fine production. I salute them.

In this film, sculptor-professor Merrell Gage, of the Fine Arts Department of USC, begins with an egg-shaped mass of clay under his exquisitely skillful hands; and, with a headful of facts about Lincoln. Add to this his ability to sculp and tell a story at the same time, and you have the material for a film you will not soon forget.

Under his hands the clay comes as near to life as clay ever can, and under his voice history comes right before your eyes, also. He begins with Lincoln as a young man in Illinois, and ages the face as he tells anecdotes of Lincoln's life, closing his performance with a head of Lincoln as he appeared four days before his death. Gage's hands

rivet our eyes every second, and his voice commands our ears, and he takes us in 22 minutes through the life and love, besetments and triumphs, of this great American.

Here is cinema at its best—sans trappings and silly fanfare. There is communication and art, and real art in communication. We highly recommend this film to all kinds of youth and adult groups in and out of church. (Arom Audio-Visual Services, University Park, Los Angeles 7, California. Rental in January and February, \$8.00; at other times \$4.00)

## A New Freedom

It's time we add a new freedom—freedom to buy and own and live in a house of your selection in a community of your choice! It will take time, but it is on its way, this "new freedom."

I liked the film, *Crisis In Leavittown*. It tells of a town that had to face a fact: an accomplished fact. Our film takes us out to Leavittown and we see people and listen to them talk. They respond readily to questions. Some are pro and others are con—on the question of a Negro family enjoying this "new freedom" we mentioned above. There is some cool reason, some hot emotion. Interlacing these interviews, is some pretty searching comment by a specialist in human relations. He keeps the film moving; his ideas give it unity. His questions, to the Leavittown people and to us, give the film impact and make it useful as a discussion starter. It is recommended heartily for this purpose.

The 30-minute film, *All The Way Home*, shows us what happens when a Negro family is about to move into a "nice" neighborhood. (This incoming family could be of any race or nationality background.) We see the shock-waves hit the community. Some folks, already teetering in emotional insulficiency, get toppled over. Others, living on a broader and more rational base, keep their wits and good-will. This film may get under your skin, as it did mine. It may show some dark corners in your mind, as it did for me. But, it has some reassuring facts, and some fondly cherished fallacies get drubbed pretty badly by its logic. In the end we of the churches should relax and realize that it is the God of our faith that has made of one blood all the men of the earth—and to sweep that aside is to tackle the tide with a whisk broom. This film is recommended to spark through discussion, reading, study, and—prayerful self-searching. (From Dynamic Films Inc., 405 Park Ave., New York 22, N. Y. Inquire on rental and availability.)

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.

## JAPAN

"JAPAN TODAY," Visual Education Consultants, Inc., Madison 4, Wisconsin. Filmstrip is in black and white. Grade range includes high school ages. Subject area includes current social studies of the country of Japan. A supplementary teaching guide is provided. 33 frames.

This filmstrip does an excellent job of presenting a view of modern Japan in a short time limit. Questions are asked at the beginning of the strip and most are answered later in the strip. Some questions are not fully answered. This filmstrip could better be used as introductory matter rather than as a summary of culminating activity. Many aspects of Japanese life are touched on, including modern farming methods, new industrial methods, type of land found in the country, types of government in operation and a look at the schools of today.

The pictures were judged to be of excellent quality and of current interest to tell of the modern day Japan. The captions were within the linguistic attainments of the intended grade level and the filmstrip both raises and answers questions about the subject. Overall rating given filmstrip is excellent.

## ART

"DESIGN SOURCES—Human Face and Figure," Visual Education Consultants, Inc., Madison 4, Wisconsin. Filmstrip is in black and white. Grade range includes from sixth to eighth grades and above. Subject area includes art. A supplementary teaching guide is included. This filmstrip was prepared by A. G. Pelikan, Director of Art of the Milwaukee Public Schools. 28 frames.

The filmstrip covers the multitude of steps required to make a human face in rather good detail. Different mediums were used and later in the filmstrip the human figure is used for art pictures. Various country art methods are included and even a man from Mars! Some of the effectiveness of the

filmstrip is lost in the black and white presentation, however its continuity leaves the viewer in a creative mood.

The filmstrip was judged to be very meaningful to its intended grade group and the captions were well within the linguistic attainments of that group. The filmstrip both raises and answers questions in its presentation and would be best used as a supplement to teaching presented during the unit. Overall rating given was excellent.

## HIGH SCHOOL ART FILMSTRIPS

Syracuse University, Audio-Visual Center, Syracuse 10, New York. Filmstrips are in black and white. Grade range includes high school college groups and adult ages. Subject area is art.

"HOW TO EMBED SPECIMENS IN LIQUID PLASTIC" (53 Frames). This filmstrip might clarify certain points for an adult or a high school student who already had an interest and a working knowledge in this subject. It does not go into sufficient detail (eg., describing the catalyst) to explain the process to a novice. The filmstrip might well be broken down into these three parts:

1. Specimen that can and cannot be successfully embedded in plastic.
2. Materials needed for embedding specimen in plastic.
3. How to embed specimens in liquid plastic.

As pointed out, the above filmstrip would be acceptable for experienced groups and those who were qualified in the field of art. For others the filmstrip covers too much ground without sufficient detail.

"SIMPLE SILK SCREEN TECHNIQUES" (50 frames). This filmstrip explains "How to Build (or construct) a Silk Screen." It has been correctly classified as a filmstrip suitable for high school or college students and adult groups.

Part one of the filmstrip is a monomer if the purpose is to create an interest in "Simple Silk-Screen Techniques." Even for high school students and adults, it seems reasonable that the first part would stimulate interest by showing finished products of any given process; parts two and three would show the methods and materials used in producing the finished products, and the final parts would show how to apply the "do it yourself" method to constructing or building necessary materials. The filmstrip is recommended only for persons who have a working knowledge of "simple techniques," because that is required for intended interest in the filmstrip.

# SOUND advice

about audio materials  
and equipment

by **MAX U. BILDERSEE**

## Using the Directory

The "Recordings Trade Directory" published in the April, 1958, issue of **EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE** is a new tool for audio-visual specialists, librarians, teachers and all others associated with the field of instructional materials. This was not a "sudden activity" on the part of this magazine, but was planned several months ago and was the result of many conferences and exchanges of opinion and ideas.

Our primary objective was to introduce the educator to recordings manu-

facturers and to create thereby a channel through which exchange of information could take place. To accomplish this we devised a simple "check-off" type of questionnaire, limiting it on one page, in the hope that a great many producers would respond.

The questionnaire itself asked several basic questions summarized briefly in the directory. We sought for you information concerning technical data concerning disc recordings and pre-recorded tapes, sales policies and the availability of a special educational catalogue. We recorded the responses faithfully and reported them in abbreviated form.

To achieve brevity we used abbreviations of terminology which may need explanation. All 33 rpm recordings offered to schools are "long play" records. The "rpm" of course refers to "revolutions per minute" and indicates turntable speed. Similarly the abbreviation "ips" applied to tape refers to tape speed in "inches per second." In order to achieve the best possible reproduction of recorded sound the reproducing machine must be run at the same speed as was the recorder.

The term "stereo" (short for stereophonic) is becoming more widely used and refers to a comparatively new recording technique which makes sound recording and reproduction more life-like. The stereo process begins at the recording session and is completed in listening. In the recording actually two recordings are made simultaneously—each using a completely separate and independent recording system. Two microphones, two amplifiers and two recording heads work together to create two sound images. In sound reproduction, the process is reversed and two pick-up heads (on tape recorders) give separate information to mutually independent ampli-

fiers, each of which serves its own loudspeaker. The two sound images are constantly separate.

The separation of the sound images is essential to stereophonic recording and reproduction, yet within a comparatively short time stereophonic discs will be available for home use. These will carry two sound images in one groove and will still require two amplifiers and two loudspeakers.

The selling policies of record companies differ. The larger companies generally sell only through commercial distributors and their product is marketed through local stores. The phraseology "sell only to trade" in the directory refers to this sales policy and means that records must be acquired through retail outlets.

Many companies, including some which offer extensive educational catalogs, sell "direct or to trade" meaning that they will honor a small order from a school or an individual but they also sell their product through commercial channels to local dealers. Finally, there are some record producers which sell only to the ultimate consumer and these are so noted with the term "sell direct" standing alone.

More than half of the listed record companies offer special educational catalogs and many of these are worth having for information and guidance purposes. At very little dollar outlay you can secure a collection of these catalogues by writing to each of the companies offering such duplicated information. The effort and expense are small and the returns in terms of new information make this a worthwhile activity.

The following nine questionnaire responses were received too late for inclusion in the list published in April.

**Bethel Record Company, Inc.**, 468 West 58th Street, New York 19, N.Y. Publish 78 and 33 rpm records; sell direct and to trade; solicit mail orders and mail inquiries. LABELS: Bethel, Bronze.

**Educo, Inc.**, Box 88, Ojai, California. Publish 33 rpm records; sell direct and to trade; solicit mail orders and mail inquiries. LABEL: Educo.

**Eterna Records, Inc., Lyrichord Records, Inc.**, 141 Perry Street, New York 14, N.Y. Publish 33 rpm records and 7.5 ips single track (stereo) tapes; sell only to trade; solicit mail orders and mail inquiries. LABELS: Eterna, Lyrichord.

**Record Broadcast Corporation**, 1149J Bent Avenue, San Marcos, California. Publish 78, 45 and 33 rpm records; and 15 ips stereo tapes; sell direct and to trade; solicit mail orders and mail inquiries. LABELS: Broadcast, Living Bible, Ice Rhythms, Treasure.

**Russell Records, Inc.**, 2480 Thompson Boulevard, PO Box 328, Ventura, California. Publish 78 and 45 rpm records; offer educational catalogue; sell direct and to trade; solicit mail orders and mail inquiries. LABEL: Russell.

### Securing Recordings

Securing recordings is not always easy. Some local record dealers do not solicit school accounts and make acquisition of particular recordings difficult. In such instances the purchaser should inform the producer, mentioning title and record number, and seek to make a direct purchase. Some local music shops have been the victims of school purchasers who, having placed orders, fail to accept delivery. However, in most communities school purchasers should have no

difficulty ordering records from retailers if they can supply three essential items of information—record title, number, and the name of the producer or the record label.

There is a problem regarding auditing records before purchase. Some sales organizations encourage this practice and offer sales on a "ten day approval" basis. These are usually mail-order concerns and there are several located in various parts of the country. Local record stores cannot offer the same service on educational records which are not likely to have popular or mass appeal. Review information such as is available in EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE as well as in some other publications has generally proved valuable as a buying guide for schools.

### School Policies

Multi-school communities have generally adopted two policies regarding recordings which interest educators. First, the recordings are treated as books. That is, rather than purchase a single disc for inter-school circulation, the communities purchase several copies of a single disc and place these copies in schools where they should be of service. The second policy—and again this parallels book policy—is to place selected recordings in

the library loan collection and make them available to students for home listening in the same manner that books are made available for home reading. And the same responsibilities for prompt return and care in use apply for recordings as for books. Student responsibility for damaged books and for damaged recordings then is the same.

### Listening Laboratories

Language Laboratories have been much under discussion recently, and there are several organizations offering special equipment to schools to meet the language department needs. In school visits we have been observing that the best learning situations are "intimate" situations in which there is a direct association between the instructor and the learner.

This has obvious and immediate application to language study and has been the major reason for great interest in laboratory audio equipment for language instruction.

Our immediate reaction is that we are being shortsighted—or should we say partially deaf. These same factors apply to learning in many areas and consequently the intimate audio instructional values, existing in foreign language instruction, also exist and are of equivalent importance in many

Here are a few of the many ways you can use a tape recorder to bring history-in-the-making into the classroom.

- Record the reports of several prominent newscasters and play them back to the class, to show how different reports on the same subject can be subtly "slanted" without altering the facts.
- Have students write and record a travelog to accompany pictures of a class field trip.
- As a new political tool, "paid" political announcements make good study material. Record a series of these from radio or TV for classroom playback and discussion.
- Have class members record their greetings and comments for exchange with a social studies class in a foreign country. Hearing the foreign students' *voices* will add a liveliness and interest far beyond that of the written word.
- By recording state and local meetings of political, pressure and interest groups, your students can learn about both subject matter and meeting procedure.
- Have the class prepare a documentary tape on your community, telling about its history, industries and culture. The early history can be gathered by asking the still-living pioneers to relate their experiences to the recorder. This tape can be exchanged for a similar one from students in another town.

The sound quality of a tape recording can be no better than the quality of the tape on which it is recorded. Educators' critical requirements for fidelity of reproduction and consistent quality are easily met by any of the eight types of Audiotape. This complete line of professional quality recording tape offers the right recording time and the right tape cost for any application. But, regardless of type, there's only one Audiotape quality—the finest that can be produced. For information on what type of tape is best for your recording job, write Dept. EV, Audio Devices.

other areas of instruction.

The first to come to mind is in the study of poetry. Immediate intimacy in listening is immediately available if each student listens alone via headphones even in the classroom situation. Story telling and listening, too, are equally intimate and every effort should be made to supply listeners with privacy. We watched four third-grade children, in a library, listening to a story telling record. Each child was alone, yet part of the group, because each had the opportunity to listen via headphones. Given a choice between the 'phones and a loud-speaker, they preferred the former. If facial expression is a reliable index of attention, each of these young people was enthralled by the listening experience . . . via the intimacy of the headphones.

This is an area of instruction methodology and equipment which has been all too little explored and needs intensive study. As we learn more — and we shall seek — we plan to report to you.

#### A Useful Musical-Recordings Reference

"RECORD RATINGS" (Crown Publishing Company, New York) is the descriptive title of the Music Library Association's Index of Record Reviews. This work has been compiled by Kurtz Myers and is edited by Richard S. Hill.

This is a volume of critical opinion which will largely be useful to music teachers and supervisors in the schools and to librarians seeking critical information on particular musical recordings. We have referred to it as a compilation because it does not represent the opinion of the compiler and editor, but rather through the use of symbols the opinions expressed by record critics for such publications as the

Saturday Review of Literature, The New York Times, The New York Herald-Tribune, Harper's Magazine, the Quarterly Journal of Speech and the Library Journal as well as some twenty other journals are reported. The emphasis is placed on musical recordings. There is, however, a section devoted to spoken recordings under the heading "Diction" which will interest those interested in instruction in some areas other than music, particularly English and the Social Studies.

#### The Pied Piper of Hamelin

"The Pied Piper of Hamelin" was written as a child's story by Robert Browning for the amusement of a sick child. It was intended to give the youngster a subject for illustrative drawings. Television recently adapted this magnificent story for its own purposes and in so doing introduced many unnecessary side-themes which contributed little but consumed time. Children all over the country saw this "spectacular" and perhaps fortunately saw very little Browning and less of the "Pied Piper." The recording of the music from this Hal Stanley production is hardly worthy of school attention, but perhaps will amuse many adults who may enjoy the catchy adaptations of Grieg's music. (RCA-Victor-LM 1563.)

**SHOWSTOPPERS:** An exceptional play which has become a musical performance is Ferenc Molner's "Liliom" which the Theatre Guild produced as a musical drama titled "CAROUSEL" (Decca Records, DL 9020). Again, as in "Oklahoma!" Richard Rodgers and Oscar Hammerstein II made the musical transitions and brought these dramas into musical focus . . . Irving Berlin wrote "ANNIE GET YOUR GUN" (Decca Records, DL 9018) which, lacking the background of a previous drama of high order, also lacks equal school usefulness although as a musical itself it marked the emergence of Ethel Merman as a star.

## ROBERT A. MITCHELL'S MANUAL OF PRACTICAL PROJECTION

450 PAGES IN HANDY 5 1/2" x 8 1/2" SIZE

• This Manual comprises the BEST of the Robert A. Mitchell articles on practical motion picture projection that have appeared in "International Projectionist," revised and brought up to date. A recognized authority on every aspect of motion picture projection, the author presents his material in easily understood language — not too technical, yet technically accurate.

• Handsomely bound and cross-indexed for easy reference, ROBERT MITCHELL'S MANUAL OF PRACTICAL PROJECTION is the most complete and practical handbook for projectionists ever compiled.

## News in the Trade

### MIDWEST OPENS NEW OFFICE

Midwest Visual Equipment Co. has established a downtown branch for rental, repair and sales of A-V equipment at 58 E. South Water Street, Chicago 1, in conjunction with Ideal Pictures Chicago film library.

### MODERN SOUND & TELEPHONE SYSTEM AT QUINCY HIGH

Electronic nerve center of the ultra-modern Quincy, Illinois, Senior high School is this DuKane console, which controls loudspeakers in each classroom, and private telephones throughout the school. Demonstrating operation of the console, at left, is H. A. Wenzel, of H. A. Wenzel Electronic Appliances, Quincy, who installed the system. Seated at console is Mrs. Lillian Bauner, office secretary, and getting his first lesson is Principal R. S. Brackman.

### OZALID OPENS NEW PLANT ON WEST COAST

This new million dollar plant for the manufacture of sensitized materials was formally opened at La Habra, Calif., on April 2, by the Ozalid Division of General Aniline & Film Corporation. Located on the Imperial Highway in Orange County on the outskirts of Los Angeles, the new installation will serve eleven western states and part of Texas, also Alaska, Western Canada and Hawaii. The eleven states to be covered fully are Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming.

Ozalid is a principal manufacturer and distributor of white print copying machines, paper and other sensitized materials used in the direct copy field. The process was first introduced as a successor to blueprinting but is now an essential system in practically every business office. Machines run from a small desk size "Bambino," to a large "Printmaster" capable of making copies of any translucent original up to 54 inches wide.

New home of the Ozalid operations at La Habra, Calif., just outside of Los Angeles, expands its Western Service.

# HELPFUL BOOKS

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgar Dale. 544 pp. Illustrated; and with 49 full-color plates. The Dryden Press, 110 West 57th St., New York 19, N. Y. 1954. \$6.25.

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1400 illustrations. The Dryden Press, 110 West 57th St., New York 19, N. Y. 1957. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arna Wittich and Charles F. Schuller. 570 pp. 249 illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**MANUAL OF AUDIO-VISUAL TECHNIQUES.** By Robert de Kieffer and Lee Cochran. 220 pages. 1955. Prentice-Hall, Inc., Englewood Cliffs, New Jersey, \$3.75.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Fraxier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mory Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mory Foley Horkheimer and John W. Diffor. Ninth Annual Edition, 1957. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**TAPE RECORDERS AND TAPE RECORDING.** By Harold D. Weiler. 192 pp. Radio Magazines, Inc., P. O. Box 629, Key ES, Mineola, N. Y. 1956. \$2.95 or \$3.95 (hard cover). Written for the amateur and semi-professional tape recordist, the book gives special emphasis to the use of tape recording in education.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

### PROJECTOR LEASE PLAN PROPOSED

E. H. Lerchen, president of Technical Service, Inc., Livonia, Mich., announces a plan by which 16mm motion picture projectors, based on the famous Devrylite and combining large screen and built-in screen projection, may now be leased by the month, just as automobiles, railroad locomotives and similar consumable equipment is leased. Leases may be turned into purchase, with liberal allowance for fees paid. Rates vary with the term of the lease, running lower on extended periods.

Check  
these 10 points  
in selecting  
16 mm sound  
projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you all of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

**NEW VICTOR VIEWER**

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

**ONLY \$92.00**

**VICTOR** ANIMATOGRAPH CORPORATION  
EST. 1910

OPAQUE

GIVE YOU  
THE DEGREE  
OF DARKNESS  
YOU NEED

Many factors influence the instructor in determining how dark the Audio-Visual Room should be: the type of equipment in use, the size of the audience, the age level, whether the picture will be in black and white or color, etc. With Levolor Audio-Visual Blinds you can always enjoy the degree of darkness you desire. Furthermore, Levolor Audio-Visual Blinds enable the in-

structor to change the room from maximum darkness to a soft diffused light—in a matter of seconds—all by an adjustment of the venetian blind slats.

It is, therefore, simple to understand why Levolor Venetian Blinds are specified for Audio-Visual Rooms across the nation. *For full details and specifications write to* LEVOLOR-LORENTZEN, INC., 720 Monroe Street, Hoboken, N.J.

## NEW FILMOSOUND SPECIALIST 399 OUTPERFORMS ALL OTHER PROJECTORS

This is the only sound projector that "zooms" the picture to fit the screen. It reverses for review . . . threads in seconds . . . shows still pictures . . . requires no oiling. It's the *only* projector with sapphire-surfaced film movement.

Prove to yourself that the 399 offers more advanced features, more exclusive features than any other projector. Ask your A-V dealer to demonstrate, or write Bell & Howell Company, 7117 McCormick Road, Chicago 45, Illinois.

ENTIRE ISSUE COPYRIGHT 1958 BY THE EDUCATIONAL SCREEN, INC.

To enable mankind to meet the challenge of tomorrow, education must utilize today the most effective techniques for the communication of ideas.

To reach a mind, to teach a truth, to educate a man, requires scientific tools. Tools to capture attention, inspire thinking and motivate the desire to learn. Visual education on film, with Moody Institute of Science, is that technique and that tool.

Exceptional in quality, unique and inspirational in concept, Visual Education films from MIS meet the need of today and the challenge of tomorrow for teacher, student and the world. "The Human Machine" in color and black & white. A dramatic film on the human body, its limitations and its potential. As the key to space travel and the atomic future, its intricate perfection must be understood. Visual education at its best, this film graphically promotes such an understanding.

**Teacher's guide.** Each MIS science film is supplemented with a teacher's guide that aids in preparing class sessions and discussions. Provides questions to stimulate student participation. It also contains significant additions to students scientific vocabulary and a bibliography for further study.

**21 OTHER SELECTIONS**  
 Snow Flakes. The Electric Eel. Spider Engineers. Blind As A Bat. Carnivorous Plants. Slow As In Sloth. Fish Out Of Water. How Many Stars. A Fish Family. Woodpecker. Crystal Gazing. Demonstration With Light. Butterfly Mystery. Food Getting Among Animals. Cicada. The Bird Community. Treasures In Snow. "Worms" To Wings. World Of Little Things. Sounds In The Sea. Plant Life At Work.

## Cover: Hansel and Gretel

The cover study this month shows producer Ray Harryhausen working on one of his miniature sets from the picture HANSEL AND GRETEL, a primary film distributed by Bailey Films, Inc. The puppet characters in the set are from the films Hansel and Gretel and RAPUNZEL. Mr. Harryhausen has produced five films in three-dimensional animation: HANSEL AND GRETEL, RAPUNZEL, LITTLE RED RIDING HOOD, THE STORY OF KING MIDAS and the popular subject MOTHER GOOSE STORIES. Bailey Films distributes them all.

## July "Convention" Issue

This year, we will again bring our readers a large, special July Convention issue of Educational Screen & Audio-Visual Guide that will literally be a *guide-book* of Convention interests and activities. It will be available, as before, around the first of the month so that those many thousands who will be attending the convention, will have ample time to familiarize themselves with its contents and map out a personal program of things to do, things to see, people to meet, etc.

The complete program for all meetings will be published. There will be descriptive articles about all of the groups sponsoring meetings. There will be a complete listing of all Exhibitors at the Convention and companies in the Industry have been invited to submit information about their products which will be compiled in a Product Review similar to that in the July 1957 issue.

This year's National Audio-Visual Convention and Exhibit, long known as the premier showcase for new audio-visual equipment and materials, is expected to reveal a larger list of new items, new products, and new develop-

ments than any exhibit during the past five years.

So be on the watch for the July issue of Ed Screen. You will want to keep it near you during the Convention for constant reference, and long after the event is over for review and remembrance.

This will also be an issue that will appeal to readers who do not plan to attend the Convention, for it will serve as a valuable substitute for actual experience in acquainting them with the latest developments in the A-V field.

## Deliberate Deletion

Last year, the July Convention was a combination of the regular monthly Ed Screen format composed of Editorial, Articles and Departmental coverage, and 22 pages of Convention representation. This year, however, no articles will appear in the July issue. Each of the regular departments will appear as usual. This was decided to give more space to a thorough coverage of the Convention.

## This Year's "Twelfth" Issue

Another "first" appears this year. For the first time in the history of Educational Screen and Audio-Visual Guide, it will complete a twelve-issue a year publication cycle. August will introduce a newer, larger, more complete "Blue Book" edition comprising a round-up and description of all audio-visual materials produced and released between June 1, 1957 and May 30, 1958. It will include descriptions of motion pictures, filmstrips, slides, disc and tape recordings, transparencies for overhead projection, maps and globes. No regular departments will appear in this issue.

— GM

## Points to "Pointing South"

Thanks for the editorial "Pointing South" which appeared in the March issue of EDUCATIONAL SCREEN. We are indeed grateful for the bright a-v spots in the South and wish there were more such places, not only in the South, but in the entire nation.

Walter S. Bell, Director

Audio-Visual Education  
Board of Education  
Atlanta 5, Georgia

## Boosting A-V in Burma

We would appreciate very much receiving a second copy of the April, 1958, issue of Educational Screen and Audio-Visual Guide. We have received our regular subscription issue which we passed on to a member of the Burmese Educational Enquiry Commission which is at present visiting the United States on an Asia Foundation grant investigating and studying

educational policies and practices in this country.

The potentialities of audio-visual aids to education have not been fully explored in Burma, and we therefore felt that an acquaintance with your publication might prove helpful to this Commission.

(Mrs.) Margaret E. Pollard

Organization Relations Division  
The Asia Foundation  
550 Kearny Street

## A Useful Idea

The National Council of Teachers of English Committee to Cooperate with Teaching Film Custodians, Inc., is preparing a series of articles on using films in classes in the language arts. The Committee asks if teachers, of language arts in the junior or senior high school, wish to share their experiences in using films, with the Committee. What has been, (or what is) your favorite film, and how do you use it?

Send replies to —

Mr. Robert Carruthers

1230 Amsterdam Avenue  
New York 27, N.Y.

## Many Thanks!

Editor: Your publication is proving to be of very great help to use because of its wealth of highly useful information.

Steven M. Gray

P.O. Box 329  
Bartow, Florida

## Dear Editor:

Even as you were writing your June Editorial advocating built-in obsolescence you must have felt my hackles rise. A more durable film stock will only make for better, more often, more easily maintained use. By cutting replacement footage and shelved damaged print costs we will help put more films into circulation, more effectively and more dependably.

Book paper today is more durable than that used a century ago, at least for popular editions . . . but this has not been the determining factor in improving texts . . . or in bringing out re-issues.

Leading producers have, of their own volition, brought out revised editions of their early films.

Bill Kruse

# YOUR GUIDE TO THE NEW, LOW-PRICED KODAK PAGEANT 16mm Sound Projector, Model AV-085

2

3

4

5

6

7

8

When you select a sound projector, demand more than just a machine for showing movies. Use as your standard the new Kodak Pageant, Model AV-085, at just \$439.\*

1. **Easy setups**—No muss or fuss for you (or your students). Film path is printed on projector. Reel arms fold into place; drive belts are permanently attached. You're sure every show will be off to a good start.
2. **Image brightness**—Don't settle for washed-out pictures, even in hard-to-darken rooms. Get the sparkle and details that the Pageant's Super-40 Shutter provides—40% more light than an ordinary shutter at sound speed.
3. **Full range sound**—A speaker must be baffled to make the low tones fully audible throughout the room. The Pageant's NEW, compact 11 x 6-inch oval is baffled in an attractive case that forms the cover for your projector.
4. **Permanent lubrication**—The most common cause of projector failures is improper oiling. You never have this difficulty with a lubricated-for-life Pageant. It's always ready to go when you are!
5. **Rugged and compact**—Printed circuits in the new 8-watt

amplifier are rugged, help make this unit compact and easy to service. You can easily move it from room to room, set up to show almost anywhere.

6. **Fidelity control**—This feature is important because a sound track can be on *either* side of a film. Only with a focusing control like the one on the new Pageant can you get the optimum sound, *no matter* which side the track is on.
7. **Protection against wear**—The pulldown claw moves the film 28,800 times during a single showing of a 20-minute movie. A tungsten carbide tooth on the new Pageant makes this part virtually wearproof.
8. **Grounded power cord**—New 3-wire cord (complete with adapter for 2-wire outlets) meets electrical codes in all locales.

This exceptionally fine projector is only \$439. Ask a nearby Kodak Audio-Visual Dealer to demonstrate the AV-085. Or, write for new Pageant booklet giving all the facts.

\*List price subject to change without notice.

# Have you heard?

## Larson Chosen by SFC

The School Facilities Council, industry-sponsored joint effort of architects, educators and industry to foster school design better suited to the use of modern teaching tools, has chosen as its president for 1958 Dr. Jordan Larson, superintendent of schools at Mount Vernon, N. Y. Dr. Larson served as president (1954-5) of AASA, and has been at his present post since 1946. In cooperation with DAVI the Council is conducting a nationwide survey on "the growth of new and improved instructional practices, particularly as they relate to the use of equipment and materials."

Two 16mm sound films are in the planning stage. One, tentatively titled "The School Bond Issue," is to be directed at the taxpayer who normally represents the "undecided but balance-turning" block of voters. The second, "What Is a Good School Facility?" is to be directed to community and building planning groups who are in the process of developing or enlarging school facilities.

Art work and script for a filmstrip on "Do Our School Buildings Aid Education?" have already been edited, and the committee in charge is currently reviewing supplementary matter. The SFC address is 26 Washington Place, New York 3.

## Animated Films in University A-V Program

Noted for outstanding work in the field of mass communications, Indiana University, Bloomington, recently installed an Oxberry stand and camera in order to facilitate the production of animated films.

Animated films are acknowledged to be one of the most effective methods for putting ideas across to people quickly and economically. This has proved to be true not only for television commercials and for school problems, but also for industry and the armed services in orienting personnel for new tasks.

Animation activities at Indiana University is an important part of a many-sided program of teaching, production and distribution. In film production, the student works with the most modern equipment and with staff experts who are well qualified to train audio-visual communications specialists.

## Color TV at Fair

The U. S. Dept. of Agriculture is represented in the World's Fair at Brussels with twelve of its films in the elaborate color television exhibit sponsored by NBC.

## Interest Mounts in NAVA Convention

Booming interest in audio-visual materials and techniques is building record interest in the National Audio-Visual Convention and Exhibit in Chicago's Morrison Hotel July 26-29.

More activity than in many years past has been shown and sales of exhibit space are running well ahead of last year at the same date, according to Wm. W. Birchfield, president of NAVA, chief sponsor of the event.

Many important groups in the nation are finding that audio-visuals offer them an outstandingly efficient way to solve their communications problems, and as a result interest in the application of these modern learning-teaching tools is mounting, Birchfield said. He pointed to developments in the church field, in enlarged government uses of audio-visuals, in increased activities by industry and business, and to the steady growth of educational utilization.

Information about the Convention and about exhibit arrangements can be obtained from the National Audio-Visual Association, Fairfax, Va.

## "Better Schools" Spotlights A-V's

*Better Schools*, the monthly newspaper of the National Citizens Council for Better Schools, carried a two-page "Spotlight Report" on audio-visuals in a recent issue.

The Report contains articles by Mary C. Welch, of DAVI; Dr. Charles Schuller, Director of the Audio-Visual Center, Michigan State University; L. C. Larson, Director, Indiana University Audio-Visual Center; Harry W. Gross, district school superintendent, Merrick, N. Y.; and Hank Ruark, NAVA Director of Information.

The Spotlight Report was an Audio-Visual Commission for Public Information project, conceived by Hank Ruark and carried out by members of the Commission; final collation and editing of the materials was done by Harold Highland, now president, Graphics Communications Center, Long Island City, and Hank Ruark.

Copies are available from *Better Schools*, 9 East 40th St., New York 16, at \$1.00 per hundred.

## The KEYSTONE Overhead Projector

is really a

## MULTI-PURPOSE Projector

usable for:

Standard (3¼" x 4") Lantern Slides.  
Tachistoslides (4" x 7"). 2" or 2¼" Slides.  
Strip-Film. Micro-Slides.

It's a Real Daylight Projector — the lens system concentrates the light over a relatively small area, so that clear, brilliant projection is attained.

It is small and light — weighs less than 20 pounds. Versatile and efficient.

Our Local Representative Will Demonstrate Upon Request.

**KEYSTONE VIEW COMPANY, Meadville, Pa.**

Since 1892 Producers of Superior Visual Aids

## A-V Convention Line-up

Six national meetings of audio-visual education specialists in the fields of education, religion, industry, medical science, agriculture and the A-V "trade" will be centered in Chicago's Hotel Morrison, July 25-29. More than 150 exhibit spaces will be devoted to displays of the latest equipment and materials for modern education. Attendance will be limited to the anticipated 2,000 participants in the six special fields.

The program of the Educational Film Library Association gets under way with registration at 9 a.m. Friday, 25th; sessions all day from 10 on, film screening at 7:30 to 10, followed by the EFLA reception. The sessions continue all through Saturday, with the official luncheon being held at 12:30. Miss Emily Jones, 250 W. 57th St., New York 19, is in charge.

National Audio Visual Association registration starts Wednesday, July 23, at 9 a.m., exhibit installation and rehearsals take up all Thursday and Friday for the big exhibition that opens Saturday noon. The first NAVA general session is a breakfast meeting on Saturday, July 26, from 8 a.m. 'til noon, in the format so popular last year in its combination of food, frolic and rear-projection visualized business-building presentations. A similar morning session is held Monday. An extensive and varied ladies program starts Saturday at 11 a.m. with a Sherry Party. The Exhibits, featuring \$1½ million worth of equipment and materials, are open from noon until 6 p.m. Saturday, Sunday and Monday, and from 9 until final closing at 1 p.m. Tuesday. In general charge is Don White, Executive Vice-president, NAVA, Fairfax, Va.

The Religious Audio-Visual Conference starts Sunday with a service at 11 a.m. in charge of the Rev. Alva Cox, director of the Department of Audio-Visual and Broadcast Education, National Council of Churches. (257 Fourth Ave., New York, N. Y.) The afternoon program starting at 2 p.m. will send quiz groups into the exhibits to find and report back answers to questions raised at the outset in the general meeting. The evening session starting at 7 p.m. will hear the Rev. S. Franklin Mack and William S. Hockman speak on the topic of "Challenge to Religious AV." Rev. Mack from the point of view of the churchman producer, Hockman from that of the consumer and critic. In charge is Mrs. Mae Bahr, Religious Film Libraries, 220 W. Monroe St., Chicago.

The A-V Workshop for Industrial Training Directors meets from 9 a.m. to 1 p.m. on Monday, July 28. Lee

Kilbourne, Industrial Relations Dept., U. S. Naval Training Station, Great Lakes, Ill., is in charge. The regional meeting of the Industrial Audio-Visual Association will be held concurrently from 9 to 5, with a luncheon at noon. In charge is Frank B. Greenleaf, Supervisor of Film Distribution, U. S. Steel Corp., 208 S. LaSalle St., Chicago 90.

The Agricultural Audio-Visual Workshop will meet from 9 to 5 on both Monday and Tuesday. Gordon Berg, of County Agent & Vo-Ag Teacher Magazine, 317 N. Broad St., Philadelphia 7, is in charge.

On Monday, all day and evening, the Audio-Visual Conference of Medical and Allied Sciences will conduct its program under direction of Daryl L. Miller, American Medical Association,

535 N. Dearborn St., Chicago.

Many of the leading manufacturers of A-V equipment and producers of materials are holding national sales conferences for their dealer representatives. These include, according to tentative arrangements, Bell & Howell Friday 12-7; Victor Animatograph Friday 3-6; Cathedral Films Friday 6:30-9:30; EDL Saturday 5-6:30; Califon Saturday 5-7; Family Films 10th Anniversary Dinner Saturday 6:30-9; Beseler Sunday 10-11; Coronet 8-9:15 breakfast (tentative); Eastman Sunday 5-6:30; Ozalid Monday 2:30-3:30; Moody Monday 6:30-8:30. In addition there will be many committee meetings and special events, such as the NAVA Dance Party Saturday evening at 9 p.m.

*Very soon, you will have an opportunity to inspect and try a completely new addition to the distinctive family of 16mm motion picture projectors built by Technical Service, Inc. We invite you to expect an entirely new standard of quality, appearance, and convenience. Nothing comparable exists in the price range of this new model.*

## 2 valuable films to show your group

**"Bathing Time For Baby."** Filmed in Technicolor by Walt Disney Productions, this practical and educational movie shows how to bathe a baby in a table tub. Running time: 13 minutes.

**"Help Wanted."** This up-to-date First Aid film includes the new back-pressure, arm-lift method of artificial respiration approved by the Red Cross. Explains many other basic principles. Running time: 34 minutes.

You may order one or both of these 2 free 16-mm. sound films. There is no charge for either, except return postage.

### People in the News

Orton Hicks, founder of Films, Inc. and a 16mm distributor pioneer, has joined Dartmouth College as vice-president and will be Dartmouth president John Sloan Dickey's associate for public relations, development and alumni activities.

\* \* \*

Walter Scott, 83, died April 9. He was chief of the Motion Picture Service of the U. S. Dept. of Agriculture from 1952 through 1955, and in the motion picture field since 1911, as actor, cameraman and producer.

\* \* \*

Mrs. Mabel Sihler was recently appointed supervisor of the Films Department of Augsburg Publishing House, Minneapolis, replacing Mrs. O. G. Malmin, who had been serving on an interim basis. Mrs. Sihler was formerly an administrative assistant in the department of education of The Evangelical Lutheran Church. The Films Department, part of Augsburg's organization since early in 1956, now carries a library of films and filmstrips numbering more than 1000 titles.

### School Building Booming

More money was spent on the construction of new educational buildings in the U. S. during 1957 than in any previous year. The total was about \$3½ billion.

The number of new buildings constructed in all categories was 9,689, the second largest total in history. Of this total, 7,841 were public school buildings, costing \$2,650,000; 721 were private school buildings, costing \$170,000,000; about 100 were college classroom buildings, costing \$56,000,000.

These facts, culled from a recent study by The School Executive magazine, certainly indicate a tremendous potential audio-visual market in our country.

### NEA Council on Instruction

The National Education Association has announced its decision to undertake an evaluation of present-day education on the elementary and high school levels. The evaluation, according to NEA officers, will be concerned with education in a broad sense rather than with the schools as institutions. This will be the first project of the NEA's newly organized Council on Instruction.

The forthcoming evaluation project, said Dr. Lyle W. Ashby, assistant executive secretary for educational serv-

ices of the NEA, will be under the direction of Doak S. Campbell, former president of the University of Florida at Tallahassee. Dr. Campbell, who has also been director of the Senior College and Dean of the Graduate School of Peabody College, Nashville, Tenn., is widely known for his work in the field of curriculum development.

### Sales Institute Draws Leaders

The Tenth Anniversary session of the National Institute for A-V Selling, to be held July 20-24 at Indiana University in Bloomington, will have again this year outstanding leaders of the A-V industry to guarantee practical and valuable Institute instruction. Institute Chairman Frank Creasy, of W. A. Yoder Co., Richmond, Va., has named Course Chairmen for the Institute as follows: SALESMANSHIP, Howard Holt, Audio-Visual Film Sales, Inc., Birmingham, Ala.; APPLIED SELLING, Howard Kalbfus, Director, Kodak Sales Training Center, Rochester, N. Y.; SALES & BUSINESS MANAGEMENT, Joe Meidt, Cousino's Inc., Toledo, Ohio; and PREPARATION AND USE OF A-V MATERIALS, Russ Yankie, regional manager, Beseler-Viewlex, St. Petersburg, Fla.

### Coming Events

*A Regional Conference and Workshop on Instructional Materials* is being held at Florida Southern College, Lakeland, Fla., June 16-July 5. A two-day Conference June 17-18 will open the Workshop, which is under the direction of Dr. H. Ted Grace. For further information write Dr. Grace at the Audio-Visual Center, Florida Southern College.

An A-V Educational Conference will be held at Indiana University, June 23-27.

The conference planned around the theme "Improving Communication Through Audio-Visual Materials" includes lectures, panel discussions, practical demonstrations, and group participation. It is designed to interest audio-visual coordinators and directors and all others interested in the educational use of audio-visual instructional materials in formal and informal education. Four distinguished national leaders have been scheduled as lecture-consultants: William H. Allen, Edgar Dale, Adrian TerLouw, A. W. VanderMeer.

Anyone interested in receiving further information concerning the conference should write to: Dr. Carolyn Guss, Audio-Visual Center, Indiana University, Bloomington, Indiana.

The Vancouver International Film Festival will be held July 20 to August 3, 1958. Classes to be screened include documentary films, children's films, and experimental films. Certificates will be awarded. For information, write c/o Audio Visual Services, University of British Columbia, Vancouver 8, B. C., Canada.

The Brussels International Exhibition will include a Presentation of the Best Films of All Time, under the guidance of La Cinematheque de Belgique. For information, write the Cinematheque at the Palais des Beaux-Arts, Brussels, Belgium.

The California State Fair and Exposition and the Sierra Camera Club of Sacramento announce August 27th through September 7th, 1958, as the dates for the Eighteenth North American International Photographic Exhibit.

The closing date for entries of prints is July 25th, and for color slides August 8th. Write to the California State Fair and Exposition, Box 2036, Sacramento 9, California, for entry blanks.

**PHOTOKINA 1958:** The world's outstanding photographic event of 1958 will be the International Photo and Cine Exhibition to be held in Cologne, Germany, September 27 to October 5. It promises to be the most important and biggest event of this kind ever held with more than 300,000 visitors expected to converge on Cologne.

Those hoping or expecting to attend the exhibition should contact the Karl Hardach Travel Service at once, at 11 West 42 Street, New York 36, New York (time is running short). This Agency has successfully handled the Photokina in previous years and is prepared to make all transportation and hotel reservations for you.

The Fourth Annual Robert Flaherty Seminar will be held August 18-28, 1958, at the Flaherty home in Dummerston near Battleboro, Vermont. As before, it will bring together film workers and students and lovers of film, for an exploration of the film medium and a searching look into its future.

The fee for the ten-day seminar — including luncheons, lectures, film showings, evening meetings and use of the conference room and reference library, is \$100.00. Inexpensive accommodations are being arranged.

Those planning to attend should get in touch with the Robert Flaherty Foundation, Inc., RFD 1, Box 94, Battleboro, Vt., immediately for early reservations.

## Looking at the Literature

### AV INSTRUCTIONAL MATERIALS MANUAL.

Edited by James W. Brown and Richard B. Lewis. 191 pp. Illustrated. Published by the Spartan Book Store, San Jose State College, 1957.

Ten men, all active in the training of teachers at San Jose State College, have pooled their talents and experience to prepare a manual for teaching audio visual methods. Their team product is a thorough job; it has broad coverage of diverse subject matter, organized chiefly under the headings — "Creating Instructional Materials," "Selecting and Appraising Materials," and "Equipment Operation." Selection and appraisal are applied to periodicals, textbooks, and encyclopedias as well as to the usual audio-visual categories. Anyone who completes all of the assignments in the manual will have had a 360 degree panoramic view of instructional materials.

The manual is well and profusely illustrated, as becomes an AV publication. It is constructed like a notebook so that pages or sections can easily be moved, taken out or replaced. This arrangement, plus the variety of content, suggests the use of the manual for more than one AV course, and/or as an aid in both general and special subject methods courses in an "integrated" program of teacher education.

The authors recommend reading in basic audio-visual textbooks (Dale, Kinder, Wittich and Schuller, and others) and exercises are keyed to such references throughout the manual. Some self-teaching is feasible with the manual; a good textbook, and access to instructional materials and equipment. For the most part, however, a good instructor is essential to successful and economical completion of assignments. The exercises are really very detailed lesson plans, expertly organized and designed to avoid waste of time and effort.

This manual has many uses, including one the authors may or may not have intended. It makes the reader want to enroll in the nearest workshop or summer course; there is still so much to learn. —M.M.

*AUDIO VISUAL INSTRUCTION*, by Paul R. Wendt. No. 14 of the series, "What Research Says to the Teacher," American Educational Research Association of the N.E.A. 32pp. 25c.

This pamphlet summarizes briefly the case to date for the use of audio-visual materials where and when they will enhance and accelerate learning. Wendt's candor is persuasive even without footnotes or identification of specific research studies.

If research on the effectiveness of certain materials is not extensive or not conclusive, the author so states. If the evidence is strong, Wendt presents the findings with conviction.

After explaining the communication process and its relationship to audio-visual instruction, the author interprets research for the classroom teacher so clearly and cogently that each point is usually well made in two paragraphs. In conclusion, Wendt discusses the need for putting research evidence into practice. Wide reading of this excellent pamphlet will help to do just that, for as Wendt says, "Research amply justifies the use of audio-visual instruction to a very much greater extent at all school levels. Although there is need for both more specific and more basic research, we have enough evidence now to warrant much greater expenditures for equipment and materials. Every teacher should know that each kind of audio-visual resource, when used to its fullest for purposes where research has shown it can help, results in greater learning in a shorter time with more retention."

by Mary Mainwaring

Audio Visual Director  
Chicago Teachers College  
and Wilson Junior College

*PRODUCTION OF 2 x 2 INCH SLIDES FOR SCHOOL USE*, Joe Colthorpe. University of Texas, Visual Instruction Bureau, Austin 12. \$1.00. This seventh in the "Bridges for Ideas" series (earlier titles included "Tear Sheets," "Bulletin Board," "Lettering Technique," etc.) is a very practical manual for better production and use of a medium well within reach of any teacher. Text is concise, graphics are abundant and interest-compelling. The book is not copyrighted and widest possible use is sought. Excellent list of commercial sources of the materials called for, and a helpful bibliography.

*KEY AUDIOVISUAL PERSONNEL IN PUBLIC SCHOOLS AND LIBRARY SYSTEMS IN STATES AND LARGE CITIES, 1957-8*. Prepared jointly by Seerley Reid, Chief, Visual Education Service, and Ralph M. Dunbar, Director, Library Services, in the Office of Education, U. S. Department of Health, Education and Welfare, Washington 5, D. C. Free. An important directory giving name, address and title of 639 individuals with key responsibilities for the circulation and use of audio-visual educational materials. This list includes 47 state educational departments, 38 state library agencies, 225 city school systems and 174 city library systems.

# About DAYLIGHTING Again

Once again we must comment about companies that are hard-selling DAYLIGHT to school taxpayers without sufficient concern for the instructional programs that must be carried on in the schools.

You may recall that we spoke out editorially with some feeling a couple years ago about a company advocating the use of glass blocks in school construction. We urged you to write and tell them about the importance of projected pictures in today's classrooms.

Now let me tell you about another advertisement in current educational journals. It's a gorgeous four page ad in live natural color. It's most attractive, and intriguingly titled ENVIRONMENT AND DAYLIGHT. Let me quote you some of the things it says: "Put students in a classroom short on window area and they will feel closed in . . . restless . . . long to be outdoors. But give them a classroom flooded with daylight . . . let them see the grass, the trees and sky around them . . . and their whole attitude improves. They are more alert, more interested, more eager."

Now what do you think of that? No reference is given to the research that disclosed that this is true. It's just stated as truth. And even if it is true, how in the world could you ever use modern communications tools for teaching in such a room "flooded with daylight?" From rooms like that, children may be able to see the grass and trees, but they certainly could never see a picture on a projection screen!

Let's read on further. "So we need the largest possible areas of glass to gather in this light . . . clear glass from floor (or low sill) to ceiling, and room wide. Daylight Walls, they are called. Only on rare occasions is daylight too bright for comfort. . . Nothing brings in more daylight than clear, flat glass."

You see what we're up against — we who know that some of the most significant and worthwhile learning experiences in the classroom cannot possibly occur with daylight streaming through "clear, flat glass." The problem is especially acute because those who know this do not have the funds to buy four

page color advertisements in magazines that influence the school architects and school superintendents.

Nevertheless, we just will not permit ourselves to believe that the glass making companies are knowingly trying to harm the instructional program in our schools. Maybe they just don't know what kind of experiences and activities must take place in a classroom if learning is to be most effective. Maybe in their zeal to sell Daylight through clear glass they have written their ads before they had all the facts.

Once before we suggested that you write to a company to tell them some of the facts about the importance and place of audio-visual materials in the instructional program. May we suggest that you write again; this time to Libbey•Owens•Ford Glass Company, 608 Madison Avenue, Toledo 3, Ohio. If you want to, ask them for a free copy of their book, "How to Get Nature-Quality Light for School Children." But far more important than your getting that book is for you to tell them why it is of the utmost importance to keep "nature-quality light" from interfering with the education of school children.

May we repeat here what we said more than two years ago:

*"Companies in the business of selling Daylight must be helped to understand that there's more to learning than reading a book. . . . One of the best ways for providing seeing-learning experiences is to project pictures.*

*We feel sure that if the daylight companies recognize this real need in classroom design, they will do something about it. Genuine light control should be a relatively simple next problem for their research divisions to tackle and solve. They need to be convinced that it is a real need; that audiovisual instruction is essential, and not just the notion of faddists; and that best teaching requires the projection of pictures in every classroom. You can help convince them."*

So why don't you immediately "pick up your pen, uncover your typewriter, call in your secretary, or take whatever is your first step in writing a letter"?

*Paul C. Reed*

by Jerrold E. Kemp

Audio-Visual Center  
San Jose State College

**M**UCH attention is given to the development of all phases of an audio-visual program in elementary and secondary schools. But what about programs on the college level? Should there not be similar emphasis and encouragement in our institutions of higher learning?

Consider the major roles of a college professor. He has two primary interests—his laboratory or other research activity, and his classroom. In the laboratory he uses the most modern equipment and develops techniques for increasingly greater success in his investigations.

Then what happens when this modern prospector leaves his laboratory and enters his classroom? Here he usually limits himself to the most ancient technique of communications—the lecture. Fortunate is the class whose instructor may also use a chalkboard to clarify an abstraction!

Should this disparity exist? Should not the professor want to make use of equally modern methods in his classroom as he does in his laboratory?

### Place for Production

Many college instructors, realizing a need for making their teaching more effective are using audio-visual materials as an integral part of their classroom activities. But all too frequently this utilization is limited to showing commercially prepared films and slides.

College teaching has a freedom that lends itself to another growing phase of audio-visual activity—the use of locally prepared instructional materials. The college instructor usually develops his own course of study and individualizes his instruction to a much greater degree than do teachers in public schools. Why then, should he not develop some of his own instructional materials to fit his specific instructional needs?

Under the guidance of audio-visual personnel with experience in production techniques and an understanding of good utilization practices, college professors realize some of the many values inherent in their own locally prepared materials. They, and their assistants, become enthusiastic, and devote time to the preparation of slides, larger transparencies, recordings, display materials, and simplified motion pictures.

Here is how one instructor was assisted in developing some of his own teaching materials.

# Producing Transparencies For College Instruction

The instructor makes drawings on the tracing paper with black ink. Lettering was added with a mechanical device.

Overlays on phases of a process were prepared on separate sheets and aligned with the base drawing. Dimensions were 6" x 6".

From these translucent copies, each tracing paper original was contact-printed non-photographically on ammonia sensitive diazochrome film.

### Planning Materials

The professor, teaching an undergraduate course in bacteriology, felt a need for a series of visuals to supplement his presentation of certain fundamental concepts. The author met with him and discussed the general subject content, suitable types of visuals, and methods of classroom presentation. It was decided that the overhead projector with appropriate transparencies would best serve the content and de-

sired method of presentation. This would permit the instructor to face his class, to refer directly to significant features on a transparency, and to add overlays while developing complex processes.

The instructor carefully studied the related subject matter to clarify his own thinking and to systematically organize details. He made rough sketches of diagrams and he selected line drawings from books and journals to supplement his own materials. After examining all materials it was decided to use two techniques for preparing transparencies.

### Preparing Materials

The instructor made drawings on thin tracing paper with black ink. Lettering was added with a mechanical device. Overlays on phases of a process were prepared on separate sheets and aligned with the base drawing. Dimensions were limited to a 6"x6" size, thus directly suitable for the projector to be used. To prepare transparencies from these translucent copies, each tracing paper original was contact-printed non-photographically on ammonia sensitive diazochrome film.<sup>1</sup> Overlays prepared in specific colors enhanced the instructional effectiveness of the visuals.

The materials selected from other sources were copied photographically on high contrast film. This process permitted a change in the size of materials and required the use of lights, a view camera, and a darkroom. The film was handled under red light and for general use the exposure was not critical. Furthermore, it required no exact temperature controls during processing. After developing, fixing, and washing, each 4"x5" negative was projected in an enlarger onto a 7"x7" sheet of the same film. The resulting positive transparency, after processing, was ready to use.

### Using Materials

Only half the job was considered completed when the visuals had been prepared. Realizing the value of an effective presentation, the instructor briefly rehearsed the way in which he would use the transparencies. When this showed one relationship not previously realized, he made a slight revision in the order of use.

In class use, as part of regular lecture-discussion periods, the materials were not only accepted readily by the students, but many came up after class to comment on their quality and effectiveness.

<sup>1</sup>For details of this process see *Instructional Materials* (DAVI) 1:40-41, March-April 1956.

Overlays prepared on specific colors enhanced the instructional effectiveness of the visuals.

Materials selected from other sources were copied photographically on high contrast film; permitting a change in the size of materials and requiring the use of lights, a view camera and a darkroom.

After developing, fixing, and washing, each 4" x 5" negative was projected in an enlarger onto a 7" x 7" sheet of the same film.

The resulting positive transparency, after processing, was ready for use.

At first the instructor was worried because very few questions had been asked during the presentation and the class time taken to explain the visualized subject matter was significantly less than taken in previous years. A quiz revealed, however, that more students gained a broader understanding of the concepts presented and grasped more details than had previous groups. The efforts seemed entirely justified!

More learning in less time . . . could more be asked?

# Tachistoscopic Teaching

The "Tach-X" is used to demonstrate group work with an entire class. Teachers learn techniques and practice on each other before introducing these methods in the classroom.

by Rolland A. Alterman

Director, Audio-Visual Services  
Kansas State Teachers College  
Emporia, Kans.

## Time Element Important

In most cases it is wise to start with non-verbal material and flash it on the screen at a slow rate of speed. Use drawings or objects that have been a part of the experience of the learner. This introductory period builds up confidence and allows the pupils to relax. At the outset, fifteen minutes a day should be ample time for use of this material. It has been found that the attention span of young children is much longer when this method is used. One explanation of the increased attention span is the fact that they consider this type of activity a game and their attention and enthusiasm is high. Margaret D. Kithau, a fourth grade teacher, Bethpage, New York, reports a by-product of importance through the use of this procedure. She states:

*Enthusiasm was high, and here was an activity that COMPELLED attention and a high degree of concentration. The work habits fostered by such a lesson set the attitude for the work to follow in other areas during the day.<sup>6</sup>*

Non-verbal material should be replaced by simple words, word phrases and, finally, complete sentences. For advanced adult groups short paragraphs should be used.

<sup>6</sup>Margaret D. Kithau, "A New Instrument Helps in Reading Improvement," *Teaching Tools*, Vol. 11, No. 2, 1954-55.

THE use of tachistoscopic techniques is not new. A form of tachistoscopic classroom training was used as early as 1895. Catherine Aiken, a classroom teacher, improved memory by writing on a blackboard and then rotating it. Samuel Renshaw used a camera shutter and projector during World War II in developing a recognition program for the navy. The program focused wide attention of the possibilities of this form of developmental training.

## Definition of a Tachistoscope

A tachistoscope is a still projector or some device equipped with a shutter for timed exposures. This device is sometimes referred to as a "Speed-i-oscope" or "Flashmeter." This device allows material to be projected on a screen for controlled lengths of time.

## Materials for Tachistoscopic Training

Several firms have commercially prepared materials on slides and filmstrips. The most common materials are in the areas of reading, mathematics, and spelling. These materials are prepared for different grade levels and are

usually correlated with generally accepted teaching materials. Probably the best results would be obtained through the use of teacher-prepared materials directly related to the curriculum. The teacher may prepare material by writing or drawing on etched glass, then project the material for immediate use. The lines are easily erased or washed off and the glass can be used over and over again. For permanent use, the teacher can type cellophane slides of any size then bind the cellophane between clear glass or plastic. The emulsion of outdated 35mm film can be removed and slide ink or india ink can be used to prepare a strip film for tachistoscopic training.

## Using the Tachistoscope in the Classroom

A good procedure to follow with any group, primary or adult, is to start where the students are. After all the clinical information and test results have been tabulated, it would be wise to administer reading tests before work is begun. At the end of a twelve or fifteen week period the group could be retested and the progress charted.

## Grouping Is Important

The tachistoscope may be used in large groups where certain minimum goals are required. An example was the rapid aircraft recognition program during World War II. For best results, homogeneous groups of five or six pupils offer the best climate for rapid improvement. This program can be integrated into the regular reading program or it may be set up on a school wide basis.

## Vocabulary and Spelling Improvement

Spelling and vocabulary may also be improved with the tachistoscope. In general, the procedure would be for teacher and pupils to select twenty to thirty words from the week's work. The first day's work would consist of exposing the words for a long enough time to discuss them. Meaning, origin, usage, and pronunciation would be included in this lesson. Depending upon the time available, the words would be exposed each day at shorter intervals. The last day, a test and final discussion would decide if any of the words should be carried over to the next week for further study. Francis M. Benson, an elementary teacher, worked out the following plan<sup>7</sup> for improving spelling in her classroom:

*1st Step.* Selection of 20 spelling words for the week. (Prepared by the teacher on etched glass slides.)

*2nd Step.* The children copied the spelling words on a sheet of paper with five columns to the right of each word, one column for each day

of the week.

*3rd Step.* Monday, each word was shown and discussed. Then each word was flashed at one-fifth of a second in different order. The children would keep record by the day.

*4th Step.* Tuesday, the speed was increased and the words were shown in different order.

*5th Step.* Wednesday, the speed was increased to one-eighth of a second and the words were shown in different order.

*6th Step.* Thursday, the speed was increased to one-tenth of a second and the words were shown in different order.

*7th Step.* Weekly test and discussion.

Throughout the year the speed was gradually increased up to one twenty-fifth of a second for the entire group and up to one hundredth of a second for some of the pupils. This teacher reported results so amazing over a three year period that this procedure was included as a regular part of her classroom work.

## Specialized Tachistoscopic Devices

There are many types of tachistoscopic devices available on the market. Prices range from an inexpensive cardboard type that fits on any slide projector at five dollars to a complete package of equipment and material at over one thousand dollars.

The Tach-X tachistoscope differs from the regular machine in that light is constantly projected on the screen reducing the "after image" effect following the exposure. This company also has a large library of prepared

material at all grade levels.

The "controlled Reader" is a companion reading instrument that provides left-to-right control or line-at-a-time projection at a variable range speed from 0 to 1000 words per minute. This machine makes possible the development of the total reading activity. Materials are available from the reading readiness level to the adult level. Individual differences usually require the controlled reader to be used with small groups. Language arts or social studies materials may be used in a correlated program in an activity-type classroom.

There are other devices that may be utilized in a training program. These devices are not tachistoscopes, but are closely related in accomplishing the end result desired:

1. **Ophthalmograph.** This machine photographs movements of the eyes. This is a binocular eye-movement camera which photographs reflected beads of light from the eyes. Fixations, regressions, recognition span, recognition time, comprehension rate, and certain emotional factors may be determined by the ophthalmograph.
2. **Junior Metronoscope.** The claims for this device is that it is used to overcome muscular laziness.
3. **Senior Metronoscope.** This device is used to help students study with little waste motion.
4. **Individual Acceleration Devices.** There are many individual reading devices that aid in reading. **Reading Rate Controller**—Stereo Optical Company  
**The Reading Accelerator**—Science Research Associates  
**The Reading Pacer**—Keystone View Company

(Continued on page 293)

<sup>7</sup>Francis M. Benson, "We Improve Spelling with the Tachistoscope," *Educational Screen and Audio-Visual Guide*, Vol. 35, No. 9, 1956.

A high school coach and an English teacher work together with the Speed-i-o-scope.

Mrs. York, an elementary teacher, and wife of a school superintendent (Lyndon), learns to use the "flash meter."

# The *POWER* of Television in TEACHING

**W**E HAVE always employed tools in the educational process. Doubtless, primitive diagrams drawn in the sand would now be referred to as visual education. They would be given credit points accordingly. Clay or paper, something to mark with, and somebody to act as master or moderator—these familiar trappings of the classroom go back thousands of years. Teachers from ancient times could step to the blackboard, sense what chalk and eraser are for, and proceed to expound upon language, literature, philosophy and ethics.

The fundamental principles have changed little over the years. Is not all vision (vision at a distance, that is) television? It is easier to see a star than to touch it, either literally or figuratively. In fact, new illusions of sight, sound, and surroundings may so merge studio and classroom in future that the world of writing and speech will often be presented in three-dimensional visual style. In our eyes, only the image is present, and our brains must accept, reject, reform, and make sense out of a welter of physical impressions.

But from the standpoint of technology there will be changes in method, and they are upon us. The question is: How may machines help us in the profession of teaching? How much longer will the standard classroom procedure remain relatively unaffected by the technology of audio and visual aids, by the sociology of a division of labor, by the application of the fine arts to basic problems?

For teaching is at once a science and an art. Its great principles rest upon a scientific base in anthropology, psychology and sociology. There are modes of learning and of failing to learn that can be studied in laboratories under controlled conditions.

In a prelearning situation, there may be the one-to-one accord between teacher and pupil so many educators yearn for—Mark Hopkins and the student sharing the proverbial log. But at the precise moment of learning, even Mark Hopkins disappears, for at

**By George D. Stoddard**  
Dean, School of Education,  
New York University

that moment everything that happens takes place in the mind of the learner. Learning is thus a special and private experience—an art if you will—but learning, in turn, makes a heavy demand upon the art of communication.

The newest medium of communication is television; to say that it is large or small does not mean any more than to say a book is large or small. For the book, the audience is the number of persons who read it or have it read to them—and so it is for television. The television audience, apart from this statistical concept, may be one person watching one presentation and getting something from it. This may be one way of discovering the nuggets in science, philosophy or the social studies and is, therefore, a really conservative approach to an educational problem.

The immediacy of the TV experience is an intriguing matter. Things are getting to be so illusory that there could come a time when an audience in a darkened room could not tell later whether it had actually seen persons. It is all illusion: for one thing, the images have been reversed; the images strike our optic nerves upside down and some other neural events fortunately turn them right side up again! So, in communication, nothing comes from me to you, or from you to me, except through the sound and light waves. These waves are not a part of us; we merely respond to them. What is illusion and what is real about seeing or listening will never be a simple problem in physics.

Thus the illusions that are created by art, especially by art wedded to a massive communication system as in printing, radio, or television, may be more “real” than the reality of seeing a single person, and for a very good reason. We form a concept in a kind of statistical average; we see persons

who do not really represent *man*. It takes an artist, a philosopher, a saint, to represent *Man* with a capital M; the phenomenon is given to art and not to any direct physical experience.

Television, like other art and teaching forms, takes advantage of this great dramatic power—this power to create impressions in a studio or classroom. It gets beyond the person and the things to the ideas and the embodiments and, in so doing, gives us something permanent. The best TV programs will live as the best books have lived.

Another great power of television lies in its flexibility. It is literally available all the time. With the perfecting of kinescopes and motion pictures, you may in the near future get any program at any time of the day for any sort of audience.

But there is an obvious difficulty. No matter how generous broadcasting stations may become, they cannot carry the load of educational television, and they cannot be expected to do so. They have to reduce everything to the common denominator of a mass audience for a particular performance and then add all the mass audiences in order to get their commercial ratings—from the standpoint of education, a hopeless task.

Under that system, how many books would have been published? How many books sell 10,000 copies or more? Relatively few. For centuries some of the finest works have scarcely produced more than 10,000 copies per decade, and yet they are among the great treasures of our culture. Eventually they get read by large numbers, if only as textbook items. Plato may be read by only a trickle of scholars down through the centuries, but if you put him into a "pocket book" he gets around. If you put him into television, as Shakespeare has been treated by Frank Baxter, what was intended for the elite only will now be understood and appreciated literally by the millions. The essential mental ability is there, and it is not highly correlated with family and social status.

The best illustration of that potentiality lies in the public school system of the United States—a wonderful example to the whole world. A good teacher ought to make a good motion picture or TV broadcast. Television may subtract something, but if the teacher has the dramatic power, if his voice carries, if you like to listen to him, if your intuition says this is a person of insight, sincerity and originality, the effect will come through. Probably television is as sensitive as any other physical medium. You will be able to spot the "phony" or the teacher who doesn't believe in his work. For example, in films (and films on television are practically the same) on the work of Galileo, it is a moving experience to see men humbly learning, revising and testing, keeping to some fundamental formula, as for gravity or inclined planes, to come out finally with some concepts that are now household words.

Perhaps the reproduction under good stage conditions of great experiments and the elucidation of great ideas alone would justify the use of television, for those are the things that may be lost in the textbooks. Something happens to the textbook-makers when they deal with a really great man, a great idea, or a great picture. Sometimes the results of fragmentation and scholastic treatment are ruinous: scarcely anything artistic and dramatic comes through. One of the things that television can restore is the sense of the unity of ideas that are of themselves organic.

As far as television is concerned, the smaller technical difficulties that we are all confronted with will disappear. Could anybody looking at the early Charlie Chaplin films, for example, have foreseen the technical developments leading up to Cinemascope in color? It was beyond imagination at

the time. If you take the genius of the writing and acting away from those early pictures, all you have is a set of "flickers": the genius has gone out of most of our Cinemascope productions, leaving a sort of tapestry not to be long remembered. But when we get talent and technique together—get our great men, get our great plays, and our great ideas working through striking techniques—then something memorable will happen.

What about the educational impact of all this? We have some strong evidence of the effect of visual aids on learning, and a few items on the effect of television, but it is true that we have not had the "all-out" experiment. Perhaps it is unreasonable to ask for it at this stage. It is the old hen-and-egg question; we have a few data to analyze. But, in my opinion, we should not hold up a movement because we lack the data that characterize doctoral dissertations. Dissertations rarely create anything. The artists, teachers or musicians who will use this new medium will respond to it; they will do work which perhaps they could not have done before. Here is something new in its reaching out to an audience. If it is good, a special inspiration may come from the knowledge that such an audience could not be reached in any other way.

Presently we cannot expect to get research of the kind that will satisfy the research expert. I think we must have faith, and it is not at all an irrational faith. It is a faith based on the uniformity of nature, on the similarity of teaching and learning experiences. Fortunately, we did learn something about radio. We know the effect of voice. We know that effective teaching can be done by radio alone. Also, we have had a fairly substantial series of studies (I was co-author of one of the books) on the effects of motion pictures on learning. In that series—the Payne Studies, directed by the late Prof. W. W. Charters—the committee established that children learn an immense amount from the sound picture, and they do also through other types of audio-visual aids. Television psychologically is not so far from the radio or audio-visual aids, such as the motion picture, that we can say it is a brand-new experience.

I should say that to close off any medium at all—printing, speaking, travel, demonstration, classroom, recording, radio or television, that is useful in opening the minds of persons from kindergarten ages up—is a calamity. It is not true that nursery education (which scarcely exists except in the minds of a few educators) is now being performed vigorously,

and very badly, by television in the home? Our children are born seeing, and they are going to look at television. Before they know what a penny is, somebody will try over and over to sell them something, at a range of ten feet. So, whether we like it or not, we have not only kindergarten education, we have infant education and right in our home for almost every child.

It is no longer a question of *whether* we shall have "educational" TV. It is a question whether the educators—detached people who have nothing to sell, who try to put across the straight goods, to get a sense of balanced living—will have a chance to use this great medium.

Few people realize what a short amount of time a child spends in school. In most of our states we have the children in school 180 days of the year—that is, for half the calendar year. For these 180 days, they spend only half their waking hours in school or on schoolwork. Small wonder that other enterprises, year after year—activities in home, neighborhood or gang—often appear to dominate the life of the growing child! What the school needs, in order really to be effective in setting the patterns of growth, learning, and adjustment, is a constant re-enforcement. Its influence may be markedly diminished by mental or social impacts that run counter to the cardinal principles of education.

To educational television, this need for educational enrichment presents a great opportunity. It can be a transition between the standard classroom situation and the physical participation in outdoor events that yield both pleasure and social experience. If we are to provide schooling for children on the basis of a longer day and a longer year than in the past, we need to get beyond the standard classroom situation. In so doing, we may be able to give help on the problem of juvenile delinquency.

I believe that many children become delinquent out of sheer boredom and frustration. They must do something; they must work out their energies. There is no inspiration at home for many of them. There is no place on the streets. The schools are closed, and, even if they were open, they might not look inviting to children in search of excitement. By spreading what is done in our best schools (or our very best cultures, for that matter, for there is no space or time limitation on television) we can bring in new experiences. Thus I can visualize school board members getting ideas by watching television programs for the children—ideas regarding school design,

(Continued on page 289)

A prime example of the use of visual aids in industry is this working model of the Convair F-102A interceptor and 41 separate pieces of ground support equipment designed to illustrate ground operations. The 1/32 scale set has already figured in six distinctly different types of uses.

# MODELS for Industry

**T**HE use of scale models in industry is a good example of how the efficient, utilitarian approach of industry can give a new perspective to the making and using of visual materials.

Recently, the Washington, D. C., office of Convair wired the San Diego plant manager for rush delivery of a 1/32 scale model of the F-102A interceptor and detail models of 41 separate pieces of ground support equipment to be made to the same scale. At one time it would have taken a master craftsman many months to turn out such an order. The San Diego plant allowed just 500 man-hours for the job—and it actually only took 177 man-hours. This speed of production was only made possible by the application of new materials and new methods to the old craft of model-making. Much of the model work was done using a fiberglass casting process which not only renders a superb job fast, but also permits the maker to produce as many copies as he wishes with very little extra time or effort.

If speed is a by-word in industry, maximum utility is its motto. Here are some of the uses this 1/32 scale

F-102A Ground Support Equipment has been used for:

## I. Organizational Possibilities

Engineering Operational Support Group used the set to experiment with all the possible support equipment maneuvers and combination of maneuvers in order to find the best places to spot the equipment for quick turnaround procedure.

## II. Table Top Photograph

The Illustrations group used the model aircraft and the model equipment as a set and as individual units for photographs to illustrate brochures, training manuals, flight handbooks, and maintenance manuals.

## III. Artist Reference

The set was also useful as a handy reference for artists working on original illustrations.

## IV. Training Program

Service Engineering representatives used the set on nation-wide tours of Air Force bases to introduce and familiarize military personnel with the aircraft before arrival of the real airplanes.

## V. Contract Reference

Sales representatives used the set in completing contract negotiations with Air Force headquarters in the Pentagon.

## VI. Budget Presentation

The set was used by the military as a visual aid when presenting the nation's ground support equipment budget to Congress. This method of presentation was so effective that the Pentagon has decided that henceforth this model set will be used exclusively to defend the ground support equipment budget to Congress on all century series aircraft.

Remember, these uses were all made of one particular model project and thus exemplify how an industrialist can get the most out of a single visual project. Many other models of the F-102A have been created to handle different presentation problems, and each of these models has ended up fulfilling multi-purpose jobs, so that expensive as some of these projects are, when the cost is defrayed in so many directions, the expense becomes most reasonable.

Various things determine the scale

of a model to be used as an industrial aid. If a model is to be viewed by a large group at one time, such as at an air show or lecture hall, it must not be too small, for instance a 1/10 scale F-102A is considered a good size. At this scale, wing spread of the F-102A is about five feet. On the other hand, a large-scale model is cumbersome in small groups or where table-top demonstration of ground maneuvers is anticipated.

The model maker himself sometimes has a certain amount to say about the scale. If the engineer wants a 1/100 scale diorama, the model maker may suggest 1/87 scale, because that is the HO model train scale and many items such as people, wheels, etc., can be bought ready-made at the hobby store in this size.

The amount of detail to be shown also affects the scale decision. Minute detail on small scale models would be microscopic. On the other hand, if detail is not important, its absence is less noticeable when the model is to a small scale.

One model of the F-102A is a skeleton affair consisting of 1,325 pieces of plexiglass cut and formed to 0.010 inch tolerance. Loft lines and other engineering information were photographed on the face of all major structural components such as bulkheads and frames. The cockpit is in detail, the pilot's canopy is removable and seat ejection is manual. This model was built primarily to take angle photographs for use in drawing

Full view of Plexiglas F-102A skeleton model shown completed in first photo.

layouts for parts catalog illustrations and other technical publications.

Sometimes a single component or a small section of the aircraft becomes the subject of a model project. Thus, the F-102A cockpit was reproduced to 1/4 scale for pilot familiarization at bases where no aircraft were available for a training check out.

The changes in the art of visual presentations through the use of models has just begun, however. The Convair 880 is just beginning to come off the drawing boards and already numerous models have been created from the blueprints and specifications. For example, a 1/4-scale plastic model of the cockpit will be used for pilot training and familiarization. Some are small, but others are life-size. Such life-size models are called mockups.

There are mockups of such things as cabin arrangements, jet engine pylons and ground support equipment, in addition to the complete full-size Convair 880 mockup which even duplicates the major hydraulic, pneumatic, and electrical components. This gigantic model stands 37 feet 5 inches high.

Going from the gigantic to the tiny, another Convair 880 model is built to the HO scale of 1/87. This model is used to demonstrate the streamlined turnaround capability of the Convair 880. To illustrate the ease with which the aircraft can be serviced and loaded, a jet airport diorama has been built around this model of the airplane.

As the products of industry become more and more complicated, the problem of communicating in the buying and selling world becomes increasingly difficult. To aggravate this communication difficulty, the time allotted to telling the story is cut and cut again. Words alone are not enough to tell it fast and well. The obvious tools are visual materials for the graphic interpretation of the blueprint requirements.

The spontaneous demands of industry have already directed many new applications of visuals, but the opportunities of the future seem only limited by the use that industry makes of the imagination and skill of the visual aids expert who can wed artistic and effective expression in three dimensions to the need for fast, practical communication of complex ideas.

Plastic 1/4 scale model of F-102A cockpit is used for pilot training and familiarization.

# DO WE NEED DEWEY?

Assistant Audio-Visual Department  
Schenectady Public Schools  
Schenectady, New York

**T**HE ideal staff of any A-V department, should obviously, include persons with varying backgrounds and experience in order that each may contribute his or her particular aptitudes to the whole program.

A basic prerequisite for at least one professional A-V staff member should be a working familiarity with library policies and procedures.

I became assistant in an A-V department with several years of teaching behind me as well as a new library degree. While I have no intention of minimizing the classroom experience upon which any A-V worker draws heavily, in this article I choose to emphasize the need for library know-how in establishing an A-V department.

Many of the problems facing the administration of an A-V department are basically similar to those of libraries everywhere — acquisition, selection, cataloging, processing, shelving, etc. If we (A-V'ers) familiarize ourselves sufficiently with those Library Standards which have grown out of years of trial and error, we can eliminate an appreciable number of our growing pains. Adaptation of these methods to our special needs is often a simple and most rewarding task.

Frequently we find that this elder profession has gone a step further in making the transition for us. Library of Congress is currently preparing printed cards for films, filmstrips and recordings. Libraries in this electronic age are circulating all types of "knowledge" materials ranging from symphony recordings and art masterpieces to educational toys.

Much of the library science curriculum is directly or indirectly applicable to the behind-the-scenes activities necessary for successful A-V operation and maintenance.

Without proper insight and realization of the pitfalls which result from top layer emphasis, we tend to minimize the importance of activities that don't show. A course in cataloging, classification and processing is the best

insurance against such an error in judgment. The library student learns that records and routines of this nature are the foundation upon which the entire collection is based. If the instruction has been adequate, the student will emerge with a new respect for the challenging task of making materials readily accessible to the potential user.

In retrospect, I come to full realization of the part the technical and mechanical procedures learned in library school have had in building the foundation upon which we have built our A-V Department and Curriculum Materials Center. The following covers but a few areas where knowledge of library techniques has been helpful or has formed a basis for decision:

## 1. Selection of materials and equipment

- Theory and philosophy of selection is the same for any collection of materials.
- Vendors often serve both library and A-V fields (Encyclopaedia Britannica, Remington Rand, etc.)
- Order routine is basically similar to accepted library one.

## 2. Classification and Cataloging

- Our classification obviously stresses type of material (filmstrips, films, tapes, etc.) and grade level. Shelflist and catalog cards are prepared and filed in a card catalog. Cross reference needs are determined and made.
- Our classification scheme for curriculum materials made was devised in order to allow for future expansion and provide for teacher browsing of our shelves.
- The assigned "call number" appears on each piece of material for identification and shelving purposes.

## 3. Discarding

Provision for withdrawals and replacements is "library born."

## 4. Organization of materials

Filing and indexing procedures contribute to sensible organization of materials for inclusion in the Curriculum Materials Center.

Above all, I think a reputable library school places emphasis on the importance of standardizing methods in so far as is possible in order that those who follow us will readily understand them and be able to build upon what has gone before.

The librarian who directed the cataloging portion of my practice work was ever cautioning her assistant to "look at the complete picture" and view their efforts in terms of posterity as well as immediate need.

Her emphasis on long-range thinking has more meaning than is immediately evident for it proves most costly in terms of time and effort, and money when one has to back up and build a foundation under an existing structure.

"Your father and I both feel that these "NOTES" from your teacher are becoming altogether too long and too frequent, Roger."

playgrounds, creative arts, or social activities.

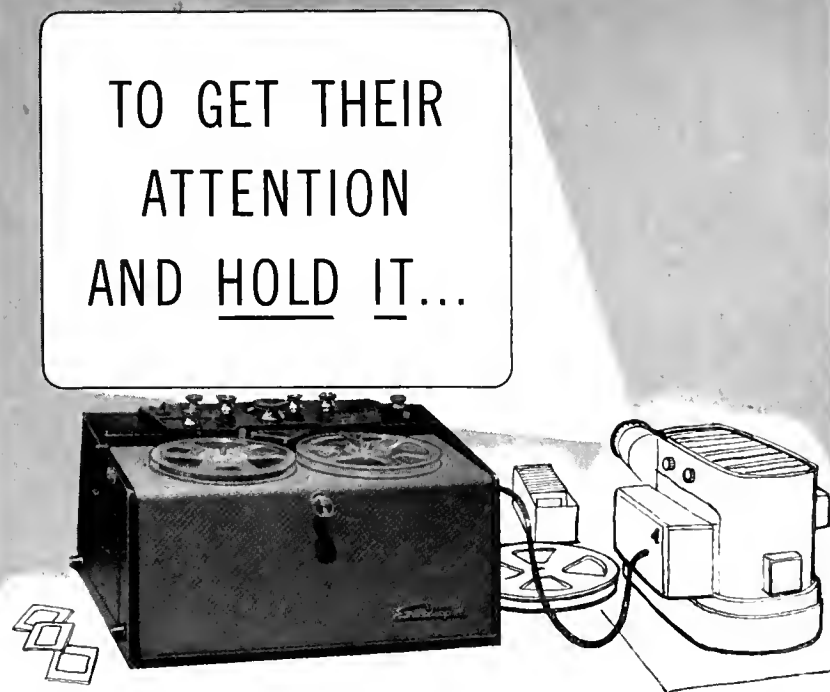

Delinquency is, of course, one part of the larger problem of mental health. When Governor Robert Meyner of New Jersey laid the cornerstone for a new institution for the psychopathic he said feelingly, "How many of these stones do we have to lay in order to take care of this problem? Is there no end to it?" We may well ask, Are the psychologists, physicians, ministers, and parents ever going to catch up with this problem? My guess is that, following our standard methods of education, they are not. But educational television is not bound by any textbooks; it comes squarely into the home or school or boys' club, frequently in terms of a program for children or youth but teaching the parents something, too. It gives us a new and wonderful opportunity to demonstrate principles by means of case studies and dramatic showings that will be hard to ignore.

One of the secret, silent partners of education by television is this: it is free from the prejudice which classroom, textbook or teacher sometimes arouses in adults. Adults like to be educated without the paraphernalia of their childhood school experiences. In the fundamental education (literacy) programs of UNESCO, one of the first words written on the board (this was in Mexico) was not *cat* or *dog*, but the word *pity*. The adult pupils knew the meaning long before they had seen the word. Perhaps educational television for adults likewise may skip the little immature steps.

Television is a public affair, not simply a contribution to our social institutions, but a new social institution in and of itself. In the United States, although we rarely mention it, there is a massive adult illiteracy in regard to economics, human behavior, philosophy, religion, art, public affairs and foreign cultures. Still we get nowhere by trying to lead adults back through the textbooks and the little tests that may not be particularly suitable even for children. Why not skip all that and introduce adults to the dramatic and powerful learning device of TV?

Truly, television may be regarded as the greatest development of the area of communication since the invention of printing.

*This excellent dissertation on television is published here with Dr. Stoddard's express permission. Originally it was presented as a talk, and has been quoted in WASHINGTON EDUCATION under the title "The Drama of the Visual Arts."*

The 310 Ekotape eliminates the unchangeable "canned" presentation, since tapes can be erased and re-recorded, or cut and spliced, to correspond to changes in slides or film sequence.

## NEW 310 **Ekotape**<sup>®</sup> with AV CONTROL CENTER

Break the spell and you lose attention. In audio-visual presentations with the new 310 Ekotape, sight and sound are always together. There's no "next slide, please," no "beep" or tone signals — nothing to divert young minds. The 310 recorder with the amazing AV Control Center perfectly times your tape with the projector. Automatically! Inaudibly!

And it's so simple. Pressing a button on the Control Center records the signal at the proper points on one half of the tape. On playback, a special amplifier converts the control signal into electrical energy which operates the automatic projector.

Ideal for the classroom — even student operators can run off a perfect presentation every time.

See yellow pages for your nearest Ekotape dealer —  
the man from Webster.

## CONFLICT

(McGraw-Hill Book Company, Text-Film Department, 330 West 42nd Street, New York 36, New York) 18 minutes, 16mm, sound, black and white, 1956. \$110.

### Description

Using frequent references to human behavior and the activity of rats in a maze this film analyzes and discusses the nature and different types of conflict.

To illustrate the common incidence of conflict, opening scenes reveal three separate instances in a day's experiences of Charlie, a university student: the alarm clock presents the need for a decision between rising to attend class and remaining in bed for a while longer; later, there is time for *either* a shave *or* a breakfast, not both; finally, he is urged by the dean to improve his studies by giving up *either* basketball *or* boxing. Such conflicts are then grouped into four types—approach-approach, avoidance-avoidance, approach-avoidance, and double approach-avoidance.

Succeeding scenes describe these types of conflicts and illustrate them with behavior of rats in a "T" maze and the actions of human beings. The first type of conflict, approach-approach, seems hardly a conflict since a choice is required between two equally desirable alternative destinations. Except for a moment's hesitation at the decision point, a thirsty rat in a maze quickly selects one or the other end where water is made available. Likewise, Charlie easily decides on a particular tie from among a number on his rack.

Avoidance-avoidance conflict, however, appears more severe. A naive rat that, prior to shock, spends approxi-

mately equal amounts of time in both ends of a maze, now moves left, then right, and back again, following the application of electric shocks at the respective ends. Escape is available through an outlet leading from the maze. The consequences of this conflict are seen as indecision and relapse into immobility at the point of choice. In the same manner, Charlie finds himself in an avoidance-avoidance conflict by having to give up either boxing or basketball.

In approach-avoidance conflict the same area or destination is both attractive and repugnant at the same time. A rat, approaching water at the end of the maze, is given a continuous shock through the grid. What the rat does—approach or avoid—the area will depend on the strengths of the behavioral tendencies involved. Vacillation leading to baffled resignation in severe frustration is a characteristic behavioral response. A young child alternately running toward the sea waves on a beach and then away from them exemplifies this conflict in human behavior.

The fourth type of conflict, double approach-avoidance, is a complex form of all three types. A rat is both attracted and repelled by both ends of the "T" maze. Charlie who has begun an evening of study is invited to a fraternity dance by a friend where a girl companion is waiting for him. He is beset by a double approach-avoidance conflict—he is attracted to his studies but wishes to avoid giving up the girl's companionship; he is attracted to the dance but fears failure in his studies. This type of conflict is identified as potentially the most severe of all types, predisposing the organism to neurosis should the conflict defy resolution over a given period of time.

The film concludes that it is only through such systematic study of conflict and observation of animal behavior that a better understanding is achieved of those forces that "determine the complex behavior of the most complex of organisms—the adult human being."

### Appraisal

Since to live precludes the necessity to choose among alternate means and

ends, conflict in varying forms and degrees is an inevitable manifestation of human experience. Of particular significance is the point that any instance of human conflict is often a consequence of preceding attempts at resolving other conflict situations. Charlie, for instance, by deciding that he could not afford to increase his chances of failure in his studies (resolution of one conflict), establishes those conditions that result in further conflict—having to decide *between* basketball and boxing and also *between* going to the dance and studying.

Seen in terms of the probable frequency and potential severity of conflict as characterizing the lives of both youngsters and adults, this film could be used to good advantage in programs of teacher training as well as parent education to promote understanding of pupil behavior in school and child behavior in the home and community.

While the film may move rapidly at times for the beginning student in psychology on both the high school and college levels, it, nevertheless, makes good use of rat behavior and examples of human conflict situations and succeeds in illustrating and clarifying the determining conditions and various types of conflict.

## Protoplasm

T. H. Huxley's "stuff of life" is always in motion, ever maintaining its mysterious organization, responding to stimuli, adapting if possible for survival. How it does so is one of the questions explored by the late William Seifriz in the extraordinary film "Seifriz on Protoplasm," now going into its fourth year of distribution. Already regarded by many as a classic among science teaching films, this is a film no one concerned with the teaching of biology should miss. In fact, of the school systems, colleges, libraries, and other organizations that have previewed "Seifriz on Protoplasm" since its release, **two thirds** have purchased one or more prints. 26 min., b&w, sound, guide. \$105. Preview print without obligation—write Educational Film Library Assn., 250 W. 57th St., New York 19, N. Y.

## FLANNEL BOARDS AND HOW TO USE THEM

(Bailey Films, Inc., 6509 De Longpre Avenue, Hollywood 28, California) 15 minutes, 16mm, sound, color, 1958. \$150. Teacher's guide available.

### Description

By presenting four groups of ideas, *Flannel Boards and How To Use Them* demonstrates a variety of ways to construct and use a flannel board.

The first sequence shows how flannel boards—quickly made and economical visual media—provide for arrangement and rearrangement of illustrations, building a logical sequence of ideas, 3-D build-ups, and animation and action.

Secondly, a demonstrator shows how to construct many kinds of flannel boards using such materials as plywood, cardboard, cigar boxes, and wall-board which can be attached to the board with masking tape, thumb tacks, staples, ironing board cover clamps, needle and thread, and pillow-case construction to make folding, portable, and pocket-size flannel boards.

Another portion of the film points out the many types of material which will cling to flannel including felt, flannel, construction paper, masonite, balsa wood, yarn, blotters, sponges, cotton, pipe cleaners, and commercially prepared pieces.

In conclusion, many uses for the felt or flannel board are demonstrated in such areas as art, English, social studies, mathematics, home economics, chemistry, general science, business education, physical education, safety, and audio-visual instruction. The many ways teachers can use their own ideas in creating teaching devices to fit their own purposes are emphasized.

### Appraisal

The wealth of ideas presented in this short film suggests wide application for persons in instructional situations including educators, churchmen, industrialists, and civic leaders. Certainly, in-service and pre-service teachers will find the content in *Flannel Boards and How To Use Them* effective in stimulating interest at all levels from kindergarten through college. The simple, how-to-do-it instructions as presented by E. Milton Grassell of the Oregon State System of Higher Education reduce questions to a minimum and encourage the viewer to "try it out" for himself. In fact, there are so many new and exciting suggestions for using and making a flannel board, the film will require several viewings before its proper impact can be appreciated.

— O. E. Bissmeyer, Jr.

## MUSIC FROM OIL DRUMS

(Folkways Records and Services, 117 West 46th Street, New York, New York) 15 minutes, 16mm, sound, black and white, 1956. \$85. Filmed by Toshi and Peter Seeger.

### Description

*Music From Oil Drums* is a how-to-do-it documentary showing the way steel drums are made and played in Trinidad and showing the way a group of American children duplicate the drums as a school project.

Mr. Seeger plays a musical scale and a short selection on a steel drum and then invites us to go with him to Trinidad to see how this drum was made and played. He takes us on a

short interpretive tour of the island and the Port of Spain, pointing out the contrasts between the old and the new and the indications of the many cultures which make up the Trinidadian way of life. The search for one of the steel drum bands which plays at the yearly Carnival Season leads us into one of the overcrowded areas of town where we hear teenage musicians rehearsing. This is the Highlander Steel Band and their leader Kim Wong agrees to make a set of steel drums for Mr. Seeger to bring back to the United States.

Kim Wong carefully selects a few fifty-five gallon oil drums from the local junkyard and begins the process of making a set of musical steel drums. He cuts a top section from the drum,

heats and "sinks" the disk to a shallow smooth basin. We follow him as he traces the pattern of the "ping pong" or soprano scale on the concave surface of the disk, nail-punches the grooves to isolate the notes and "buckles" the individual sections which produce the tone. While the young man is tuning the drum Mr. Seeger reviews the origin of the steel drum bands, their relationship to the Carnival Season, and the creative spirit of the young people who originated the new form.

The teenage craftsmen finish four different drums or "pans" which are tuned together to form the basic elements of the steel drum band. The "ping pong" pan contains twenty-four notes on which the melody is played with a rubber tipped drumstick. The second pan (alto), the "guitar pan" (tenor), and the bass pan have progressively fewer notes and play harmony and establish the rhythms of the selection. Additional rhythmic variations may be achieved with a "cutter" or "iron" (usually a brake drum struck by a stick or piece of metal) and possibly a maraca.

Mr. Seeger brings the drums back to the United States and teaches his pupils how to make their own drums. The fruits of this project conclude the film as we see children and adults of all ages playing together in their own steel drum band.

### Appraisal

The novelty of the subject matter, the enthusiasm of the performers, and the genuine interest of the narrator provide an authentic educational and motivational film. Music educators and recreation leaders should find it useful with upper-elementary, high school, and college students both in regular classes and summer workshops. Although the technical quality of the film is not of professional standards, it does not detract from the vitality and spontaneity of the film story.

—Bruce R. Buckley

## CRISIS IN LEVITTOWN, PA.

(Dynamic Films, Inc., 405 Park Avenue, New York 22, New York) 31 minutes. 16 mm, sound, black and white, 1958. \$150. Teacher's guide available.

### Description

This film consists largely of interviews of men and women who live in Levittown, Pennsylvania, situated between Trenton and Philadelphia and composed of young families with veteran and college backgrounds whose chief investments are in homes and

automobiles purchased on time. These interviews were conducted and recorded by Dr. Dan W. Dodson, Director of the Center for Human Relations and Community Studies, School of Education, New York University, in August, 1957, just after the outbreak of violence occurring when a Negro family moved into this all-white community of 60,000. The William Myers family is close to the norm of Levittown in all respects but one.

The first person queried by Dr. Dodson expresses surprise and disappointment over the violence. She believes that in time information will quiet the rumors; they might have been avoided altogether had the minister-sponsored Human Relations Council had more time before the Myers' arrival to prepare for integration. The second woman interviewed predicts that the Myers can never live comfortably in Levittown. She feels that as a result of their coming property values will decline just as they did in Washington, D. C., and she is convinced that negroes are counting on intermarriage rather than education of their own as a means of gaining equality with the whites. Here, Dr. Dodson points out, is evidence of frustration and deep fears; dreams of middle class respectability and white superiority seem in jeopardy when negroes can afford the same things as whites. Three other mothers, who draw upon their children's experience with negro youth, are convinced that integration means crime and violence in Levittown as well as loss of status for the whites. A man, on the other hand, asserts that the majority of citizens do not oppose the Myers' coming, and sees no reason why in a democracy things will not work out for the new family in Levittown. Taking an opposite view is a car salesman. He is willing to do business with anyone who has money to spend and claims not to be involved in the controversy personally. But he is fearful for neighboring families where tensions have developed over the question of intermarriage and other threats posed by the presence of negroes in the community. Fully one-third of the whites will leave their homes in Levittown, he claims. Contradicting all he says is a woman who wants her children to experience integration and who tells Dr. Dodson, "I don't think that the Myers have anything to do with property values decreasing or increasing. . . . I think it is the feeling of the majority group that will influence the property. . . ." Finally the interviewer talks with a mother immediately concerned with overcoming fears planted in her children's minds that they "will have to

marry niggers." Nevertheless she still wonders whether William Myers was paid and sent to Levittown to cause trouble, and this despite her avowed sympathy with the handicaps faced by a negro mother whom she had known from girlhood days in Kentucky.

His interviews completed, Dr. Dodson summarizes the opinions expressed by the various people, and examines briefly the fallacies therein regarding integration and its effect on property values, crime and intermarriage. Then he refers to the increasing number of middle-class negroes who are determined and economically able to leave the slums, and asks whether other communities must be split by this development as was Levittown. Meanwhile William Myers is seen standing in front of the home which he and his family occupy there.

### Appraisal

This film is recommended for use by community groups and high school classes in sociology, psychology, and American problems. A study guide provides excellent statistical, case study, and bibliographical material as well as commentary on and from the film. It deals with such matters as why negroes seek to move into white neighborhoods; their actual effect on property values, delinquency, crime and violence; the ability of negro families to buy their way out of the slums; and the nature and source of prejudice. The evaluating committee noted the somewhat heavy hand of the interviewer in the film and sensed a possible bias in its sampling. In every case but one there was some cue as to the national background of the interviewee. Among the many social implications of the film one of the most significant and dramatic is the fact that William Myer or no other negro is heard actually speaking. There is another excellent title in this same series on the changing neighborhood called *All The Way Home*. It is similarly concerned with the problem of white property owners selling to negroes, and dramatizes a crisis that is impending rather than documenting one that has actually materialized.

## Tachistoscopic Teaching

(Continued from page 283)

The Rateometer — Audio-Visual Research Company

The Shadowscope — Lafayette Instrument Company

## Tachistoscopic Arithmetic Training

A progressive system is just as necessary to effectively improve arithmetic instruction as it is in reading or spelling. It is wise to start with number recognition. The concepts that the children have may be improved by associating number symbols with number names through the single digit. Transition is made to two or more digits as comprehension and speed is improved.

From number recognition, the pupils advance to combinations which include addition, subtraction, multiplication, and division. Various methods, such as those described in the above sections, can be worked out by the individual teacher. For example, some pupils may improve through combination work of writing, hearing and seeing digits. A plan for initial teaching, retention practice, and testing and reviewing, is essential in training of this type. Materials are available at every grade level. The teacher will probably want to prepare classroom material to supplement prepared material which may not apply to every individual or class.

### Summary

Mechanical devices cannot and should not take the place of the teacher. In this rapidly moving world, the school and the teacher are expected, yes and required, to provide more learning about more things in a shorter time. The teacher needs all the help available that will enable her to guide her pupils to a fuller potential.

Tachistoscopic methods cannot increase the natural capacity of the individual, but these methods allow development within this capacity at an accelerated rate. It should be pointed out, that methods described here will not fit all situations. Emphasis should be placed upon clinical diagnosis of problems. A complete testing program should be a prerequisite for any type of tachistoscopic training.

Teachers would do well to attend a college or university and take special work in this type of visual education before undertaking a major program in public schools. Using a scientific approach, teachers should be encouraged to try various techniques in their own classrooms.

come out of the shadows... INTO THE LIGHT

# SOUND advice

about audio materials  
and equipment

by **MAX U. BILDERSEE**

### Rarity

It isn't often that audiovisualists adopt their own media for their own public relations purposes, but "THE CASE OF THE CURIOUS CITIZEN" is the happy exception which should, if properly used, do a great deal to dispel the "fallacy of frill" which has surrounded audiovisual education for too many years.

The Audio Visual Commission on Public Information has rendered an exceptional service to education generally and to audiovisual education particularly in the preparation and publication of this set of slides accompanied by a recording designed specifically for informing your parents-teachers-and-civic-groups concerning the fundamental contributions of the audiovisual program to learning.

Filmed in the Penfield (N. Y.) schools, and recorded at the Eastman Kodak Company in Rochester, "The Case of the Curious Citizen" follows a child's parents as they discover, with the help of the principal, the variety of functions served not only by the audiovisual center but by materials, equipment and personnel in the improvement of instruction. Among the

simpler devices demonstrated are flash cards, the flannel board and the flip chart. Motion picture projectors, recorders and record players, the opaque projector, maps and globes, slide and filmstrip projector utilization are also shown as is the controlled reader with a large group and the reading pacer with individuals.

The guide through the tour appropriately is the principal who explains that modern education requires the effective utilization of these devices and others such as solar system models, overhead projectors, dioramas, "take-apart" models and the bulletin board. The complete survey emphasizes, appropriately, student participation and learning—not the machines. The audiovisual gadgeteer will find little solace in this summary of the effective audiovisual program, but the modern schoolmen who are devoting their efforts to instructional improvement will profit from knowing and from using this publication with school and with community groups.

The Audio Visual Commission has done an exceptional job in preparing and producing this effective presentation, and in so doing has honestly represented the best in audiovisual thinking.

Distribution of "The Case of the Curious Citizen" has been undertaken by AVCOPI through their national office, Room 2230, 250 West 57th Street, New York 19, N. Y.

### A New Dimension

Folkways Records offers a new dimension in journalism in two recent recordings, "Interview with Dr. Robert M. Hutchins" (Folkways FC 7351) and "Interview with Margaret Chase Smith" (Folkways FC 7352). These informal discussions with reporter Howard Langer reveal directly and by suggestion the points of view of these two American leaders. Coupled with "Veep" (Folkways FS 3870) which is a series of interviews with Alben S. Barkley, and "William Douglas — Supreme Court" (Folkways FC 7350) which is

an interview with that distinguished jurist and traveler, these recordings open a new avenue for studying not only current problems but also the people who are dealing with them.

In the interview with Dr. Hutchins Mr. Langer leads the discussion through an exploration of the purposes of the Fund for the Republic and its personnel. There is considerable discussion of the meaning of the Constitution and the conditions under which it was adopted—as well as the conditions to which today it is being adapted. Consideration is given to the manifold problems of maintaining a free society in the second half of the twentieth century, despite the pressures of modern living.

Dr. Hutchins reviews the report of the Commission on the Freedom of the Press and restates vigorously his convictions in regard to American journalism. Modern education does not go unscathed, but rather is reviewed by Dr. Hutchins with particular stress, of course, on his particular point of view regarding public education. He refers to educational television and teachers' aides, mentioning them only as partial possible solutions to the variety of current educational problems. Further, Dr. Hutchins compares the socio-economic atmosphere of 1958 with those of earlier years, both depression and prosperous.

Senator Margaret Chase Smith deals more directly with her personal reaction, as a Senator, to her membership in the most exclusive gentlemen's club in the world. Mrs. Smith recites her daily schedule, reporting the hours of work which she, as a Senator, undertakes both "in" session, and "out." She describes her reaction to lobbying and letters and calls upon women, as America's "house cleaners," to improve the American political climate and to maintain progress so that the people may be better served by their elected representatives in the Congress as well as in State and Community law-making bodies.

Mrs. Smith further discusses her own political ambitions, needed legislation, and closes with advice to young people concerning the subjects most important for them to study and the values of application in the pursuit of learning.

All of the recordings cited may be used as models in high school and college journalism classes for studying the interview procedures, and further, guidance instructors may find the material valuable in discussing political and educational careers with students. There are obvious uses, too, in modern problems classes as a strong stimulus to discussion. The points of view of each interviewee are strongly expressed, and

there is bound to be disagreement and consequent discussion in class.

### 'Charming'

"Charming" is the word to describe "The Reluctant Dragon" (Caedmon TC 1074). Boris Karloff reads this delightful tale by Kenneth Grahame and, before he is through with his presentation, your sympathies rest entirely with the monster and you fear for his well-being at the hands of St. George.

Of course, this is no "ordinary" dragon. In fact, it is an "ornery" dragon (by dragon standards) because instead of engaging in typical dragon pursuits such as fire breathing and maiden snatching, our hero reads poetry and is known to dash off an occasional sonnet, "just for kicks."

Boris Karloff's artistry as a reader neatly complements the equally artistic writing of Kenneth Grahame and the result is pure pleasure. This is adult pleasure—requiring maturity of experience and learning to accept the dragon's foibles and to recognize that the author and the reader are leveling the lance at all those who insist on conformity for its own sake. It is said that satire is hardest, as a form of writing, to bring off successfully, and herein it is accomplished.

### "Many Voices"

We have many times urged book publishers, especially publishers of English text-books, to enter the recording field and to publish recordings specifically designed to accompany texts. Harcourt Brace has recently published a set of records designed to accompany their texts, and are publishing their records under the title of "Many Voices." "Many Voices—1" is designed to supplement "Adventures for Readers: Book 1." It is narrated by Cyril Ritchard and includes readings not only by the narrator, but also by Alexander Scourby, Nancy Wickwire, Hiram Sherman, and a group from the Millburn (N. J.) Junior High School, directed by Virginia Chilver. Among the poems included on the recording are "The Highwayman" (Noyes), "Annabel Lee" (Poe), "Poor Tired Tim" (de la Mare), "The Road Not Taken" (Frost), "Lord Randall" and "The Broncho That Would Not Be Broken" (Lindsay), "The Landing of the Pilgrims" (Hemans), "The Young Washington" (Guiterman), "In Flanders Fields" (McCrae) and a short, humorous verse under the heading "Laughs and Chuckles." For oral prose, "A Miserable Merry Christmas" (Lincoln Steffens) is read by Hiram Sherman.

This is a very creditable presentation, and can be used readily in junior high schools in English and literature.

by WILLIAM S. HOCKMAN

## A-V Training For Teachers

Keeping this little piece quite elementary, there are three phases in training the church school teacher in the use of audio-visual aids: a) telling and showing her what is available; b) showing her how to use equipment and letting her practice; c) telling and showing her how to wring the educational juice out of an audio-visual aid. A word about each of these.

### What's Available

Everything starts here. Teachers can't use what they don't know about. They won't use things right under their noses, right there in your A-V library, unless you show them and tell them what IS there. How is this done?

In two ways: tell and show. I put telling first. This is done by the printed (mimeoed) page. I like to circulate a list, giving brief descriptions, of filmstrips which relate to the themes under study in the church school; which refer to special days or seasons of the church year. This starts the process; makes them want to see.

Now comes the second way: showing. How is this done? The best way I have found is to put it right out in the open and ask them to come in and take a look for themselves at their own convenience. "At their own convenience" is of great importance, I find. This is the principle of availability, of proximity, of touch, and feel, and see—which sells so much in the "dime" stores and supermarkets. Stuff that's locked up and can't be seen, and touched and handled, will not stimulate many people to use it.

Listen to this: "Mr. Hockman, when I was in the other day I got the key and looked over some filmstrips. Gee, that filmstrip previewer on the table is a great convenience!"

"Did you find what you were looking for," I asked.

"Yes, and a lot more. I saw a number of things I'd like to use some time."

There it is: Seeing motivates use. People see the stuff and get ideas. They

get notions about how it will fit into what they are trying to do. That's what we want.

Make your filmstrips available if you want them used. And let me add this: These leaders and teachers will spend more time with those filmstrips if you are not breathing down their necks, ladling out advice and comments. That bothers them; makes them uncomfortable; and they get out as fast as they can. (More on this later.)

### Getting On To New Equipment

This is a tricky one. Many teachers are scared of mechanical gadgets. They think they have no aptitude in this direction. Most do. It's a matter of motivation.

Here's the secret: They will learn best and fastest when their motivation is at its highest. Could anything be older or more obvious than that observation, and more often ignored?

Yesterday a co-principal of the Primary department phoned me. She wanted to know if I would show her how to run a filmstrip projector, that the principal was away and she had to take over on short notice and that a filmstrip was scheduled.

Now I could have said, to myself: I'm busy; after all there are teachers in that department who can run that projector for her; let her ask them. That would have been the easy and un-wise way out. Her high-voltage motivation could not go to waste. Not now. There was a time when I would have told her to get help and attend

the next course we put on. Not now; I've learned better.

I met this worker — at the time she named. She was right on time. We went right to work — in the room where she would use the filmstrip. Her interest was intense; her attention concentrated, and her determination to learn very tense. I showed her the basic operations, and then watched her go through it all. One or two little corrections, and explanations, and she did it all again. In eight minutes she announced that she had it licked — and she did. As we walked out of there, I had another person in that department who could operate a filmstrip projector. No high school boys, out of their classes, and under foot! On Sunday morning she would come a little early and do another practice run, and she would bring off a pretty good "performance."

While "courses" at institutes and workshops on the operation of equipment have their place in the total program of training, they have their limitations and can never be considered a substitute for this hitting of the iron while it is hot.

### Educational Juice

While a full-length discussion of this important subject must be put off to a later issue, this much can be said now and in this context.

If you can't use what you don't know about, you can't use effectively what you don't know well. This means preview and study. This is where much utilization fails: teachers trying to use what they know poorly.

To know is to see, and it is the seeing that must be made easy. That's the reason the table filmstrip previewer is such an important tool. With it, preview and study are made easier: helpful in making selections, it is basic to study. This is the first step in getting the educational juice out of any visual aid.

The next is not unlike it: total preparation of the materials, of the program, and of those to be "taught." While all three are important, it is the

**TEACHING AIDS**  
**FILMS, FILMSTRIPS,**  
**SLIDES, POSTERS, ETC.**  
*Write for Free Catalog*  
**AMERICAN BIBLE SOCIETY**  
 Audio-Visual Department  
 440 Fourth Avenue, New York 16

last that gets neglected. To do so is to squeeze oil out of peanuts with your bare hands. Total preparation calls for making the group ready to learn what it is supposed to learn. To leave out the creation of this readiness-producing material is to wipe up spilled cream with a dry sponge because you lack the wit to dampen it.

How is this done? In one sentence, it is done in two ways: by showing the teacher *how* it is done and by helping her to get ready to do it. Teaching by showing is hard only if you don't know what to do yourself. Too many A-V leaders can talk a good performance, but turn out to be hollow gourds in front of the children. Showing is the first essential.

The second is related to it: helping the teacher get ready to do the job, and then later on going over with her how the whole thing came off. And here again, she must be motivated to learn or else both of you work almost in vain.

Right across the A-V landscape here is our weakest spot: the failure to create readiness in those whom we would teach. We even have one school of thought that's opposed to the idea. You can entertain without it but you can't teach without it—and that's announcing the existence of a law and not dogmatizing it into existence.

## A Needed First

The First National Executive Consultation on A-V Christian Education will get under way at Penn State University on Friday, August 15th, under the general auspices of the National Council of Churches. Already into the middle of the Second Decade of the A-V movement in the church field, we believe that the date is late for this top-brass gathering, and let it be fervently hoped that they turn out for it. Having gotten its feet somewhat off the ground of effective contact with the local church, and having failed to penetrate the top echelons of denominational leadership, the A-V movement in the church field has been a middle-class movement involving some mighty fine people with heavy work-loads and lots of responsibility but without much ultimate say about policy. We hope the denominational generals and admirals will scramble aboard for this three-day consultation. There is much they can learn.

For these three days two themes with variations will be heard. The first will be "Learning Theories, Research Findings, and Their Application." The variations will be 1) "To Attitudes"; 2) "To Concepts"; 3) "To Skills." The performers will be members of the

Penn State faculty and we are assured that some of their "music" will come out visualized.

The other theme will be on "Design," and the variations will be on "New Designs in Production," "New Designs in Utilization," and "New Designs for Research." On the podium for the first performance will be Alex Ferguson, and wielding the baton for the last two will be Leslie Greenhill of the PSU faculty.

The kick-off speech Saturday morning will be made by Professor D. Campbell Wycoff. He will discuss "Christian Education Curriculum Thinking Today." On the following Tuesday he will again address the consultation on "Where Can We Go From Here?"

Designed, perhaps, to get us all there by the first evening, Orville Kuhn and Earl Waldrup will co-chair a preview of what IS coming and lead a discussion of what SHOULD come. And, let it be recorded here, after seeing and using for some time now what HAS come, many A-V users will be eager to know about what IS coming. Let us hope that there is some solid engineering and creative design on the way. Fancy sales jargon and tail-fins on the old fenders can't be relied on much longer.

After the Consultation will come the Fifteenth International Conference on A-V Christian Education, August 19-23. Structured somewhat like former years, there have been many improvements in the schedule: a panel presentation begins the day; then the 11 Study Groups fill the morning up to lunch. In the afternoon there will be free time (?); denominational meetings; private and group previews.

The evening presentations will be geared to some phase of "Instructional Materials,"—using, evaluating, getting them to the consumer and such.

In closing, how can you have a conference "On A-V Christian Education"? What is "A-V Christian Education"? "Christian Education" is something understandable; but that "A-V" variety is a little puzzling, especially to an old timer in this work. But, I begin to see the light! It is parallel with "Blackboard Christian Education"; or, brought up to date, "Chalkboard Christian Education"! Or, am I still confused?

## Music Films

I enjoyed the little (13½ minute) color film, *Handel and His Music*. If I liked it, children and boys and girls will like it also. It is nicely structured. The photography is a good approach to authenticity, and the musical selections are acceptably presented. It deals with his life, his compositions, and the

world in which he lived. It does this with insight, conciseness, and fine feeling. I recommend it heartily for Juniors and up in the church school, and also, for use in choir schools. Almost any group in the church, young people or adults, will enjoy this film. Many excerpts from the composer's vast creations are heard, and the film ends with the Messiah "Hallelujah Chorus."

Other films in Coronet's "Famous Composer Series" give a similar treatment to Beethoven, Brahms, Liszt, Mozart, and Schubert. Not having previewed these, I assume that similar film-standards prevail in these, making them just as useful to music teachers and educators as *Handel*. (For rental sources and rates, write to Coronet Films, Coronet Building, Chicago 1, Ill.)

## Ali's Camel

It is altogether possible that no films especially for children will be produced in connection with the church's study of the Middle East in the fall 1958. Year after year we have a deficit of films for children in connection with these study themes, and little seems to be done about it. Why should films be made for adults only? It just so happens that several years ago Atlantis Productions, Inc. (7967 Sunset Blvd., Hollywood 46, Calif.) made an 11-minute color film, *Ali and His Baby Camel*, which can be used to supplement the books and filmstrips which will be produced on the '58-'59 mission study overseas theme.

This film shows Ali and his camel in an authentic "Middle East" setting. It shows adult camels, too, as they work in the city, on the caravans, and at wells and water wheels. The keen eyes of a good teacher will see in preview many of the things she and her Primary and Junior boys and girls will want to talk about, read about, and work out, perhaps, in projects. Highly recommended to all those with a dab or two of educational sense and imagination. (Inquire concerning rental rates.)

## D.C.E. Filmstrip

The 110-frame, photographed-in-color filmstrip, *Meet Bill Hayden, Director of Christian Education*, tells acceptably and in very good technical form, the story of the work of a director in a certain church, but it does not present a satisfactory view of the vocation of the Director of Christian Education.

This filmstrip details Bill Hayden's story across the first five years of his ministry, but it does not show what a director IS and what he does in the

large categories of this vocation. To this reviewer, a Director for more than three decades himself, we see Bill Hayden making educational gestures and not taking a strong educational stance. In presenting the story of one DCE, as the producer and his advisors conceived it, the directorship as a vocation and as a ministry did not get adequately presented.

While this filmstrip will have considerable usefulness in telling the story of a certain Director, it falls short of the higher goal of showing what the vocation of Director is, what it requires in terms of personality, education, directional skills, and educational philosophy. Now that we have a filmstrip about a Director, we need a companion filmstrip about the directorship.

A frame from the filmstrip, *Meet Bill Hayden, Director of Christian Education*, where he and members of the recruitment committee call on a prospective teacher.

(Produced by Frank Bear Film Productions, Inc., 3426 Bay Front Place, Baldwin, N. Y., for the Directors' Section of the National Council of Churches, 257 Fourth Ave., N. Y. 10, and available from the Producer at the price of \$12 which includes the filmstrip, a comprehensive script-guide, and LP recorded commentary.)

## More O. T. Films

Since copy went in for the May issue, four additional titles in Concordia Film's "Old Testament Teaching Films" series have come along—*Joseph, The Young Man, Joseph, The Ruler, Moses, Called of God*, and *Moses, Leader of God's People*.

Taken as a whole, there is no improvement in general qualities over the first four titles commented upon in May. I did have one agreeable surprise. In the black and white version the costuming and make-up does not seem nearly so inadequate. Since color has nothing or very little to do with what these films try to teach, it would seem to this reviewer that the B&W is the more useful version. He is prompted also to ask how color can be justified when color has no essential and inherent relationship to the material under treatment? What has color to do with narrative or dramatic material which

has no inherent or unique color characteristics? (More of this at a later time.)

These films, as those which preceded them, are characterized by Biblical literalism and externalism. They do not go beyond form to meaning. They do not deal with the religious or spiritual meaning of these great narratives. And there is no creative imagination to redeem this externalism. Thus, we are given the prose of film concreteness for the poetry and imagination of the literary account. As literature, the Biblical account always towers over these films because they are not spiritually sensitive and artistic creations. They embalm the externals. They pass out the cobs, not noting that the corn or religious meaning got knocked off in handling. When will we think enough of the Bible to leave off filming it until we can bring spiritual understanding, spiritual sensitivity and artistic creativeness into the job in full enough measure to save our efforts from mediocrity? (From Concordia Films, 3558 S. Jefferson Ave., St. Louis 18, Missouri; running time 17 minutes; rental, color \$9.00; B&W \$6 00)

## A-V Bible — Latest Edition!

Beginning with September I am going to send a form letter to all and sundry who write asking me to tell them about two or three of the best films on this or that subject. It will go something like this:

Dear Brother Brown:

You are right, I am a busy man. You, too, are busy. The busier you are the greater your need for the latest edition of the AUDIO-VISUAL RESOURCE GUIDE. This is the "bible" of the busy pastor, the church school superintendent, the director of education, and the advisor of the youth fellowship, to say nothing of the program chairmen of your clubs and women's work.

I regret that I cannot take the next two hours and copy out of the AVRG the titles of all the fine films on the subject you mention. If you will send \$10 to the AVRG, 257 Fourth Ave., N. Y. 10, you will receive a handsome book which will give you more than 2500 indexed and classified evaluations of church-useful films, filmstrips and recordings.

BILL HOCKMAN

Of course I shall be delighted to have letters which react pro and con to this Department, and shall welcome ideas, and comments, and criticisms of all kinds. I just don't want to compete any longer with the AVRG!

# A Neglected Phase of Audio - Visual Education - -

Should Audio-Visual Directors be interested in children's movie habits?

If so, how shall we raise standards of photoplay discrimination? Dr. William Lewin offers the following effective materials as a step in this direction:

1. A basic text, STANDARDS OF PHOTOPLAY APPRECIATION, by Lewin and Frazier, \$4.75 a copy. Postage and insurance free if check accompanies order.
2. A series of Photoplay Filmstrips in color, based on great photoplays, including Alexander the Great, Greatest Show on Earth, Knights of the Round Table, Adventures of Robinson Crusoe, Romeo and Juliet, Ulysses, Hansel and Gretel, The Glass Slipper (Cinderella), Richard III, The Living Idol (A Lesson in Mythology), The Vikings. \$7.50 each. Columbus, b/w, \$3.50.
3. Illustrated Study Guides for meritorious current movies and TV revivals, entitled PHOTOPLAY STUDIES, at 30c a copy. Send stamps for sample copy. Also available on a subscription basis. See order blank.

**Money-  
back  
guarantee.**

**May be  
ordered  
on  
approval.**

## News in the Trade

### TRANSFILM WINS AWARD

Transfilm Incorporated (N.Y.) recently received an award for its motion picture "A Moon Is Born," when Scholastic Teacher Magazine presented its eighth annual sponsored film awards at the Advertising Club of New York. Produced for the International Business Machines Corporation, the animated film was the first motion picture visualization of the launching and tracking of the Project Vanguard earth satellite. It has been shown widely on television and in motion picture theaters in more than twelve countries.

### COLBURN MAKES CHANGE

John Colburn and Henry Ushijima have acquired full ownership of Colburn Film Services, Inc., and have changed the name to John Colburn Associates, Inc.

The present company is divorced completely from the film Laboratory John and his brothers originally owned.

Under the present reorganization plan, John E. Colburn as President, will continue as the active business and financial head while Henry Ushijima, in addition to his duties as Vice President, becomes Executive Producer for the firm.

### SVE OFFERS BONUSES

A Special Summer Promotion — "BUY NOW — PAY IN SEPTEMBER" of interest to all purchasers of filmstrips and slides has been announced by the Society For Visual Education, Inc., Chicago.

This special and unusual event provides a \$64.50 Graflex "Century 35" camera, complete with carrying case and flash attachment, free of extra cost, with each \$190.00 order for SVE filmstrips and/or slides and a \$17.95 Radiant 40" x 40" tripod "Leader" screen with each order totaling \$75.00. The offer expires July 31, 1958.

### MARCELLUS BUYS MIRACLE 16MM

The Marcellus Mfg. Co. of Belvidere, Ill. has purchased the Miracle 16mm sound projector from the C. O. Baptista Co. of Wheaton, Ill. and plans to promote the unit on the commercial market, via AV dealers.

### ADDRESS CHANGES

**Compeco Corporation,** now at 1800 N. Spaulding Ave., Chicago 47, Ill. Telephone unchanged: EVERglade 4-1000. Almost twice as much space and greatly improved facilities.

**Audio-Visual Research,** now at 523 S. Plymouth Court, Chicago 5, Ill.

### FERGUSON & LANTZ RETURN

Alexander Ferguson and Donald Lantz have just returned from a stay of several months in the Holy Land, where they made motion pictures and stills for filmstrips, in a series tentatively titled "Shepherd Life in Biblical Times," "Homeland of Jesus," and "Jerusalem." Two further series will deal with the geography and archeology of Palestine.

### BESELER BUYS POC

Projection Optics Co., Rochester, N. Y., has been bought by the Charles Beseler Co., East Orange, N. J. The Rochester plant will continue in the production of lenses and precision optical equipment, under direction of Philip Berman, who has been named president.

### GRUBER APPOINTS DISTRIBUTOR

Jack C. Coffee Co. (710 Seventeenth St., N. Chicago, Ill.), has been appointed exclusive distributor for the Gruber Products Co. line of Wheelit mobile projection stands.

"OH — tell Mr. Rodney I'm sorry ... I MEANT tomorrow morning."

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10**—Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

## NEW VICTOR VIEWER

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

**ONLY \$92.00**

# More than 40 schools and colleges use GPL/NTS TV equipment

## INVESTIGATE!

See a demonstration in your own school!

**1. YOU'LL SEE** the best in closed circuit TV equipment, made by GPL, one of the leading manufacturers of military, broadcast, industrial and instructional TV. You'll see the GPL View-Finder Camera — of highest quality; meets professional broadcasting standards. Like all General Precision Laboratory TV equipment, it is simple to operate, dependable, efficient, versatile, and economical

**2. YOU'LL SEE** a full line of cameras and accessories for all closed circuit uses — the most complete line available anywhere. Fixed classroom camera shown (at Port Chester High) operates unattended, clear pictures give every student a "front-row" seat at science, shop or other demonstrations.

**3. SINGLE UNIT CAMERA** by GPL, a system with built-in controls, complete in itself. Add-to feature permits the addition of accessories as needed.

**4. BRIGHT, WALL-SIZE PICTURES** are available by using the GPL Projection TV System. As few as 100 and up to 1,000 students, teachers, and parents can easily watch closed circuit programs, or educational broadcasts "off the air," in school auditoriums, or in large, multi-purpose rooms.

**5. YOU'LL GET** the most comprehensive service for all your TV needs from Educational Television Products, a division of National Theatre Supply — a GPL sister company. NTS has branches coast to coast; a collect call will promptly bring a technically trained NTS man anywhere to help you plan a tailor-made system.

**6. NTS** assumes complete responsibility for delivery and installation, and the man from NTS instructs students and teachers in the proper operation of the equipment. Round-the-clock service insures that your GPL/NTS Instructional TV equipment will never miss a class!

**INVESTIGATE!** Don't settle for any closed circuit television until you've seen a free demonstration of GPL/NTS TV in your own school! Write or phone, collect, to Mr. H. Barnett, Director, Educational Television Products Division, National Theatre Supply Company, 92 Gold Street, New York 38, N. Y.; BEekman 3-4170.

*A single source for all your TV needs*

# New ideas in teaching and training tools

... crafted by Bell & Howell, the recognized leader in audio-visual equipment. Here are only samples of the broad line that includes: New Electric Eye Cameras ... Time and Motion Cameras ... Slide and Movie Projectors ... high fidelity Tape Recorders ... all with Bell & Howell's famed engineering quality. All are sold and serviced by the nation's most experienced A-V dealers.

**Spool Load Electric Eye Camera**—automatic exposure control. Lets everyone shoot expertly. 240EE.

**Automatic Slide Projector**—Changes slides automatically or by remote control. Easiest to use. Robomatic.

**Brilliant Multipurpose Projector**—shows both slides and filmstrips. 500 watt and 750 watt models. 724A.

**4-Speaker Tape Recorder**—high fidelity for music appreciation. Unique sound system, simple operation. 300L.

**Deluxe Portable Tape Recorder**—superior 2-speaker model, versatile and compact, newest control features. 775.

**Heavy Duty Sound Projector**—meets all projection situations, conference rooms to auditoriums. 16mm. 614CB.

**World's most popular sound projector**—theater quality pictures and sound, proven dependability. Magnetic recording model also available. 399E.

## On Two Special Issues

### National Audio-Visual Convention and Exhibit

Here it is—our Special Convention Issue we told you about last month. This Convention issue (as we are pleased to refer to it) is Special in many ways; because this is only the second year of its publication, because such a great part of it is devoted to Convention news, meetings and activities, and because we have endeavored to make it specially different in format, interest, and value to its many thousands of readers. It is Special, too, in being larger than our regular issues, although it carries no articles such as we customarily publish, and the Trade Review department has been dropped due to the extended Product Review section that begins on page 344.

We are specially proud of this issue because we think—and we feel you will agree, that it is a vast improvement on the first Convention issue published in July of last year.

In this issue we give you a broader coverage of each of the six Audio-Visual groups that gather together each year and combine their efforts to make this National Convention and Exhibit an increasingly important event.

You are offered a biographical sketch on each group, telling what they have done, what they are doing and what they plan to do to further the use of Audio-Visuals in the fields of Industry, Agriculture, Science, Church and School.

To further acquaint you with all of the newest developments in the Audio-Visual field, study the lists of Exhibitors beginning on page 325.

This is just a sample of why you should keep this book with you at all times during the Convention and enjoy its Special benefit.

### Annual BLUE BOOK Edition Of Audio-Visual Materials

Next month you will be treated to another Special issue of Educational Screen and Audio-Visual Guide.

As we told you last month, this will be the first time we will have published an August issue, and the first time our Annual BLUE BOOK OF AUDIO-VISUAL MATERIALS has appeared in August.

Last year, you will remember, the Blue Book appeared in December as a sort of end-of-the-year summary, but this year we are switching it to August in response to recommendations from the field that the BLUE BOOK, now in its 33rd annual revision, be timed to hit the start of the school year, rather than the calendar year as heretofore.

This is the book that is referred to constantly throughout the whole year and beyond, by thousands of buyers and renters of AV materials. In it you will find listed, described, classified and indexed . . . new films, filmstrips, slide sets, non-projected materials (visuals), disc or tape recordings, transparencies for overhead projection, maps and globes, for church or school use, that have been announced during the past eight months, from October, 1957, to June 27, 1958, inclusive.

Our hope is—that you will find this August issue something Special in the way of an annual BLUE BOOK OF AUDIO-VISUAL MATERIALS, and that you will approve our timing it to appear in the Summer instead of Winter.

Our intention is—to continue to publish an August issue from this point on, and unless we are proven wrong—it will continue to be our BLUE BOOK.

### EDUCATIONAL SCREEN & AVGUIDE

#### EDITORIAL STAFF

PAUL C. REED, Editor. GAIL MARTIN, Managing Editor. WILLIAM S. HOCKMAN, Editor for the Church Field. L. C. LARSON, CAROLYN GUSS, and JOHN FRITZ, Editors for Film Evaluations. MAX U. BILDERSEE, Editor for the Audio Field. PHILIP LEWIS, Technical Editor. ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD, editors for New Filmstrips.

#### BUSINESS STAFF

H. S. GILLETTE, Publisher. MARIE C. GREENE, WILLIAM LEWIN, Associate Publishers. JOSE, PHINE H. KNIGHT, Business Manager. PATRICK A. PHILIPPI, Circulation Manager. WILLMA WIDDICOMBE, Advertising Production Assistant.

#### Advertising Representatives

DON WHITE, Executive Vice President, National Audio-Visual Association, Fairfax, Virginia.

# A Neglected Phase of Audio - Visual Education - -

Should Audio-Visual Directors be interested in children's movie habits?

If so, how shall we raise standards of photoplay discrimination? Dr. William Lewin offers the following effective materials as a step in this direction:

1. A basic text, STANDARDS OF PHOTOPLAY APPRECIATION, by Lewin and Frazier, \$4.75 a copy. Postage and insurance free if check accompanies order.
2. A series of Photoplay Filmstrips in color, based on great photoplays, including Alexander the Great, Greatest Show on Earth, Knights of the Round Table, Adventures of Robinson Crusoe, Romeo and Juliet, Ulysses, Hansel and Gretel, The Glass Slipper (Cinderella), Richard III, The Living Idol (A Lesson in Mythology), The Vikings. \$7.50 each. Columbus, b/w, \$3.50.
3. Illustrated Study Guides for meritorious current movies and TV revivals, entitled PHOTOPLAY STUDIES, at 30c a copy. Send stamps for sample copy. Also available on a subscription basis. See order blank.

**Money-back  
guarantee.**

**May be  
ordered  
on  
approval.**

## ORDER BLANK

To: Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, N. J.  
Send:

..... copies of STANDARDS OF PHOTOPLAY APPRECIATION @ \$4.75.

..... recent issues of PHOTOPLAY STUDIES @ 30c each.

..... subscriptions to PHOTOPLAY STUDIES  \$3 for 10 issues.

\$5 for 20 issues.

..... filmstrips @ \$7.50 each, as marked below:

## Editorial Appreciation

For some reason I missed your editorial, "Pointing South," in the March, 1958 issue. It has recently come to my attention, however, and I wanted to say thanks.

We very much appreciate that recognition of the things that are going on in this region in educational television. I hope you realize that some of the credit for that program goes to you.

Robert G. Anderson

Director  
Southern Regional Education Board  
Atlanta 9, Georgia

## Texas U. says "Thank You"

We wish to take this opportunity to thank you for your fine review of our handbook, "Production of 2 x 2 Inch Slides for School Use" in the June issue of your publication.

We are indeed grateful for this coverage, for it is only through professional magazines such as yours that we inform others of our handbooks.

Ellen Schmidt

Publications  
The University of Texas  
Austin 12, Texas

## Wants "Daylighting" Distributed

I read with considerable interest your June editorial "About Daylighting Again." It points up what we have been trying to impress on our customers for several years—re: that daylight projection is not feasible and that the construction of one A-V room is sheer folly.

We are engaged in the manufacture of window shades, primarily for the school market. It is our contention that all windows in a school building need some type of window control and every room should be equipped with some device that will enable the instructor to readily darken it. At the present time we feel that a simple roller type darkening shade is the most satisfactory and economical means of accomplishing this goal.

Do you have reprints available of your editorial? We would like to distribute it to our 300 dealers in 44 states and Canada. If reprints are not available, may we have permission to reproduce your editorial in its entirety for this distribution?

Richard P. Franklin

General Manager,  
The Oliver C. Steele Mfg. Co.  
Spiceland, Indiana

## In Defense of New Films

We have read with interest your fine editorial in the May issue of Educational Screen. Would it be possible to obtain 250 to 500 reprints of this editorial at our expense?

E. N. Nelsen

Sales Manager,  
Coronet Instructional Films  
65 E. So. Water St.  
Chicago 1, Ill.

## Topnotch U. S. Film Showing at Venice

Twenty-five films—labeled "first rate" by the newly formed Committee on International Non-Theatrical Events (CINE)—are expected to boost America's prestige abroad when they are shown at the Venice Film Festival, July 17-27, according to an announcement today from the National Education Association.

The committee chose appropriate films for special categories set up by directors of the Exhibition—such as short feature films, documentaries, animated cartoons and puppet films, scientific and technical films, etc.

# SUMMERTIME is RECONDITIONING Time...

Summertime... when your prints are out of circulation for a while. That is the ideal time to have them restored to good condition through Peerless servicing:

- inspection and cleaning • scratches removed
- defective splices remade • perforations repaired • curl or brittleness corrected

Then, thoroughly rejuvenated, your prints will be ready for hard use in the fall.

Send us your prints *now*

# How to make your A-V budget buy MORE PROJECTORS

The new Kodak Pageant Sound Projector, Model AV-085, is a 1958 machine that rolls prices back to 1955 levels. It lists for only \$439!\*

In simple terms, it means you can buy *more 16mm sound projectors* on a given budget without sacrificing picture or sound quality. Or, pay less for a single machine and have money left over for other purposes.

*Many "high-priced" features*—The AV-085 is a first-line machine in every sense. Sound reproduction is clear, natural, resonant. The exclusive Kodak Super-40 Shutter provides a brilliant screen image that's sharp from edge to edge. Its operating quietness makes it an ideal projector for classroom and small-room shows.

Ask your Kodak audio-visual dealer to demonstrate the new Kodak Pageant AV-085 soon. Even if you don't plan to invest in more projectors immediately, it's a machine you should know about.

Meanwhile, the pictures and captions show some of the many reasons why the AV-085 is a remarkable buy. And Bulletin V3-22, yours for the writing, gives full details. No obligation, of course.

*\*List price subject to change without notice.*

1. More projectors for your A-V dollars. New Pageant Sound Projector, Model AV-085, is budget-priced, yet has regular Pageant features: folding reel arms, attached belts, Kodak Super-40 Shutter for brilliant screen image, takes 750 or 1000-watt lamps.

**EASTMAN KODAK COMPANY**  
Dept. 8-V, Rochester 4, N. Y.

2. Natural sound, good bass response with new 11-inch oval speaker in baffled enclosure. The Pageant's powerful, sensitive 8-watt amplifier provides clear, resonant sound reproduction.

3. To meet all electrical codes, AV-085 has new 3-wire power cord, adapter for 2-wire outlets.

4. All Pageants are lubricated for life to insure long, trouble-free operation. Another long-life feature is the virtually wearproof pulldown tooth of tungsten carbide.

How to  
convert all  
schoolrooms  
for  
audio-visual  
instruction  
with  
**LEVOLOR  
A-V  
BLINDS!**

Any or all schoolrooms, no matter when they were built, can be converted for all Audio-Visual teaching by the simple and inexpensive installation of *Levolor Audio-Visual Venetian Blinds*. Full and positive control as low as zero footcandle is possible—quickly and easily. For full details write to Audio-Visual Dept., Levolor-Lorentzen, Inc., 720 Monroe Street, Hoboken, N.J.

*Be sure to specify*

# TOGETHERNESS

If we were to have the privilege of writing the dictionary definition for "togetherness," it might look something like this:

**to-ge-th'er-ness** (too-ge-th'er-ness), n. [AS. fr. *to*, *to*, plus *geador* together.] A state or condition of feeling and working in close harmony, as for instance the audiovisual field; esp. as exemplified in National Audio Visual Convention and Exhibit.

Certainly "togetherness" (even if it isn't in our 1956 dictionary) is a most appropriate word for the audiovisual industry; and it's been that way for a long time. Audiovisual dealers have worked together to achieve common goals. Audiovisual manufacturers and producers have discovered ways to work with one another and to work in close harmony with dealers. And the consumers—the audiovisual educators and trainers—have worked closely with the industry in developing and using the products that are continually making learning more efficient and effective.

Togetherness will continue to be exemplified in the great National Audio Visual Convention and Exhibit of 1958. The two largest convening groups will, as for many years past, be the National Audio Visual Association and the Educational Film Library Association. In addition to these, there will be four other important conferences and workshops for specialized groups during the four days of meetings. Although people will be meeting in various groups, working on specialized problems, all participants will be working together toward a single common goal:—finding ways to make the best possible use of audiovisual materials and equipment in the different tasks of communicating knowledge and ideas.

This special Convention Issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE serves many purposes. It brings together for you, all the pertinent information of the 1958 Convention and Exhibit. It provides the complete program of all of the meetings well in advance of the conference dates. In exclusive background stories, it tells

you about the various groups that are holding meetings and workshops. It provides you with a complete guide to all exhibits, telling you who's who and what's what. In addition, there is a complete round-up of all the new products of the audiovisual industry.

This special issue is an indispensable guide for the two thousand and more specialists and workers in the audiovisual field, attending the meetings and Exhibit. Also, because of the wealth of information about new products in this issue, and because of the information about organizations and activities, it will be an equally useful reference tool for the thousands of regular subscribers unable to be at the Chicago meetings.

In publishing a special Convention Issue of the magazine, the SCREEN staff feels that this is but one more example of the contributions we have traditionally made toward bringing about clearer understandings and bringing all parts of the audiovisual field closer together. From its 1922 beginning EDUCATIONAL SCREEN has endeavored to interpret the needs of educators to those who could fill those needs. It has constantly brought information about new audiovisual products and methods to those who could use them and who have used them. It has served as a bond to hold together all the diverse elements that must work together to achieve successfully.

TOGETHERNESS is a good word to describe the state or condition of the audiovisual industry at convention time in 1958. We're proud that this magazine had something to do with bringing this great convention together for the first time back in 1947. We are still more proud of the distinguished part we've played in bringing about the togetherness that is exemplified by the audiovisual field. You can be sure we'll continue to do our part.

*Paul C. Reed*

# The National Audio-Visual Association

Nineteen years ago, a pioneering group of audio-visual dealers formed the first trade association in their uniquely service-oriented business.

From that meeting has grown the National Audio-Visual Association, a vigorous and growing force in the audio-visual world.

The first organization, the National Association of Visual Education Dealers, joined hands with the Allied Non-Theatrical Film Association in a merger in 1949.

One of the most significant developments in the audio-visual field during the decade since that merger has been the steady growth of a nationwide system of professional audio-visual dealers—local business firms who specialize in the sale, rental and servicing of audio-visual equipment, and the distribution and rental of films, filmstrips and other audio-visual materials.

During that same decade the specializing audio-visual dealer has become more and more an expert in communications tools and techniques, ready to bring to bear his wide experience and knowledge on any communications problem involving sight and sound.

This month the National Audio-Visual Association, usually called \*NAVA, will sponsor the National Audio-Visual Convention and Exhibit, in Chicago's Morrison Hotel, July 26-29. More than 2,400 persons professionally interested in audio-visuals, from every segment of the A-V field, will attend this world's largest A-V convention to take part in the concurrent meetings and workshops of educational, agricultural, religious, industrial and business A-V groups, and to visit the Exhibit where more than \$1.5 million worth of A-V equipment and materials of every kind and type will be displayed.

But the Convention and Exhibit, important as it is, represents only a small part of NAVA's activity in the audio-visual field. Working from a complete and efficiently planned national headquarters building recently constructed in Fairfax, Va., just a few miles from Washington, D. C., the National Audio-Visual Association carries on a wide range of activities on behalf of its own membership and the audio-visual field in general.

Founded for the express purpose of stimulating more widespread and effective use of audio-visuals, and to improve professional and business practices in the audio-visual industry, NAVA has always worked to build better cooperative relations among manufacturers and producers, distributors, and consumers of audio-visual materials and equipment.

Fortunate in its choice of leadership which has adopted a farsighted and effective "service" approach, NAVA has taken a leading role in national public relations work for the A-V field. One of the founding groups of the Audio-Visual Commission on Public Information, NAVA has in the last year helped produce, print, and distribute nearly 100,000 copies of GATEWAY TO LEARNING, the effective AVCOPI photo-story about the A-V idea, and nearly 50,000 copies of A CRISIS IN EDUCATION, the simple graphic summary of A-V research. In addition, NAVA staff and NAVA members have aided in the design, production and distribution of other AVCOPI materials and projects. NAVA's own public relations program provides materials and information to national and trade magazines,

periodicals, and other publications, as well as supplying information and aid to others working in the audio-visual public relations field.

Ever since its founding, NAVA has worked in the field of legislation, and was instrumental with other cooperating groups in bringing about passage of the postal legislation permitting shipment of audio-visuals under the library book rates; more recently, NAVA has aided in neutralizing efforts to require permits for shipments of audio-visuals to non-profit organizations.

Since establishment of its Fairfax, Va. headquarters, NAVA has exerted more and more effort to provide information, demonstration and testimony concerning the audio-visual field and the effects of audio-visual techniques in education and training to Congressional committees and other influential and important groups. It was through these efforts, coupled with those of others, that a comprehensive definition of audio-visual equipment and materials was included in the revised version of the Elliott bill (H.R. 12630), which proposes multimillion dollar federal support of special programs in education using expanded and improved modern teaching facilities.

NAVA has long had an Educational Committee which works closely with all state groups seeking audio-visual programs and appropriations, and the NAVA headquarters staff does everything possible to support the work of such groups.

NAVA has an Audio-Visual Service Council for Business and Industry which provides a channel for liaison projects and a source of information on audio-visual applications in business and industry, for individuals and groups in that area of audio-visual activity.

A Committee for Relations With The Religious A-V Field, and other important committees, provide for activities of service and cooperation with every major audio-visual group.

Among the most useful and most authoritative publications in the A-V field are the NAVA *Membership Directory and Trade List*, and the *Audio-Visual Equipment Directory*, presently in its fourth edition. The *Membership List and Trade Directory* provides a comprehensive, coded geographical listing of every NAVA a-v dealer in the nation, showing his services and the types of equipment available for rental from him; it also contains names and addresses of all NAVA Advisory members, including practically every major a-v producer, manufacturer and supplier.

The Audio-Visual Equipment Directory furnishes full information, technical specifications and photographs of more than 500 models of A-V equipment, and contains descriptive listings of a large number of other accessory a-v items. Material for the Directory is collected from all a-v manufacturers and suppliers annually, carefully edited, and published in a plastic-bound 8½x11" book which lies open for easy use of the authentic, authoritative data contained in its more than 200 pages. The Equipment Directory is available for purchase at \$4.25 per copy.

The National Institute for Audio-Visual Selling, a unique professional A-V sales training institution, is sponsored by NAVA in cooperation with Indiana University every year just preceding the Convention. The Institute calls on leaders in the A-V industry and business worlds to combine their talents with the skilled instructors from the University School of Business and Economics and the University

\*The first "a" in NAVA is pronounced as in "have"

**Ainslie A. Davis**

**William W. Birchfield**

**William C. Kirtley**

**Don White**

Audio-Visual Center, providing professional A-V background and sales understanding and skill for NAVA dealers and salesmen. One of the strongest factors in the recent A-V "local production" movement has been the practical and productive course in A-V utilization and preparation offered by Harvey Frye of the A-V Center and others during recent NAVA sales institute sessions.

The *NAVA NEWSletter*, published twice monthly, is widely read and highly valued within the industry and among audio-visualists everywhere for its terse reporting of news, information and the latest developments in the A-V world.

NAVA officers and directors are elected annually through a completely democratic mail ballot system; only dealer members vote. The activities of the Association are governed by an 18-man Board of Directors which meets during the Convention and again in October yearly to plan and design the work of the Association. An Executive Committee is empowered to act as occasion warrants during the year.

Present officers of the Association are: Chairman of the Board, Ainslie A. Davis, Davis Audio-Visual Co., Denver, Colo.; President, William W. Birchfield, Alabama Photo Supply, Montgomery, Ala.; First Vice-President, P. H. Jaffarian, The Audio-Visual Center, Seattle, Wash.; Second Vice-President, William G. Kirtley, D. T. Davis Co. of Louisville, Louisville, Ky.; Secretary, P. Ray Swank, Swank's, Inc., St. Louis, Mo.; Treasurer, Harvey Marks, Visual Aids Center, Denver, Colo.

Members of the Board of Directors besides the officers include, as Directors-at-Large, L. C. Vath of Vath Audio-Visual Aids, Sharpville, Pa.; H. A. Fischer, Photosound of Orlando, Orlando, Fla.; Mahlon Martin, M. H. Martin Co., Massillon, Ohio; and E. F. Burke, Burke's Motion Picture Co., South Bend, Ind. Regional Directors are Harrison Harries, Harrison Harries Co., Hartford, Conn., New England; James W. Bell, Jr., the Calhoun Co., Atlanta, Ga., Southeast; Mrs. Eleanor Bell, Kansas City Sound Co., Kansas City, Mo., Plainsregion; Ty Sidener, McCurry-Sidener Co., Sacramento, Calif., Western; Robert P. Abrams, Williams, Brown and Earle, Inc., Philadelphia, Pa., Middle Atlantic; Larry Skeese, Films Unlimited, Mansfield, Ohio, Midwestern; M. G. Gregory, Sound Photo Equipment Co., Lubbock, Texas, Southwest; and Bernard Tessier, Centre Audio-Visuel, Inc., Trois-Rivieres, Quebec, Canada.

The NAVA national headquarters staff is headed by Executive Vice-President Don White, who joined NAVA in that post in 1946. White is a former University of Georgia a-v specialist who served as an audio-visual training officer and as a photographic officer during World War II.

Henry C. Ruark, Jr. is NAVA Director of Information, answering professional queries in the a-v field and working with various projects of the Association as well as with the NAVA public relations program. Ruark edits the Audio-Visual Equipment Directory, NAVA News, and other NAVA publications. He is a former newspaper writer and college teacher, having experience as a college audio-visual director and as a staff member of the Audio-Visual Center at Indiana University.

Mrs. Bryce Moore is NAVA Business Manager, handling the administration of the NAVA headquarters office and coordinating work of other personnel, including several secretaries and the NAVA printing operations, which are carried out in a complete offset-printing shop at the national headquarters building.

**P. H. Jaffarian**

**P. Ray Swank**

tives at the respective exhibit booths.

### Friday, July 25

Victor Animatograph Sales Meeting  
Bell & Howell Audio-Visual Dealer Sales Meeting

### Saturday, July 26

Califone Sales Meeting  
EDL Sales Meeting  
Family Films 10th Anniversary Dinner

### Sunday, July 27

Beseler Sales Meeting  
Eastman Kodak A-V Dealer Sales Meeting

### Monday, July 28

Ozalid Sales Meeting  
Moody Institute of Science Dealer Dinner

"You're the Guest Speaker?!"

# The Program Story

Members of the National Audio-Visual Association attending the two visualized general sessions of their organization during the National Audio-Visual Convention and Exhibit are going to hear and see major presentations on critical problems and areas of the a-v world, done by expert and knowledgeable speakers.

The keynote speaker for the sessions will be Joseph A. Allendorf, Eastman Kodak Company director of market development. His presentation, opening the first general session at 9 a.m. Saturday, July 26, bears the intriguing and provocative title "What's Cooking?", and can be depended upon to provide much ammunition for new thinking and new activity in the audio-visual industry.

Joseph A. Allendorf

A beautifully visualized presentation on "Selling Profitably By Telephone" will be given by William A. Garrett, sales engineer for the American Telephone and Telegraph Corp., of New York City.

William A. Garrett

A panel discussion on problems in film distribution will follow the morning session, with Paul R. Foght, of Chicago, general manager of Ideal Pictures, Inc., making an introductory presentation.

Sunday will again be observed with the NAVA Joint Church Service, this year under the direction of the Rev. Alva Cox of New York City, Director of the Dept. of A-V and Broadcast Education of the National Council of Churches.

What will the audio-visual business be like in 1960? That is the topic of John J. Dostal of Garden City, N. Y., long-time veteran of the audio-visual marketing field, who will open the Monday-morning general session.

The NAVA annual meeting, with NAVA President William Birchfield of Alabama Photo Supply, Montgomery, Ala., presiding, will take place immediately following Dostal's presentation.

John J. Dostal

A featured address by Dr. S. Franklin Mack of New York City, Executive Director, Broadcasting and Film Commission of the National Council of Churches, will be presented after the business session.

Dr. S. Franklin Mack

All meetings will be in the Terrace Casino of the Morrison Hotel, providing one of the best meeting sites in the country. All presentations will be visualized, with complete professional facilities including rear-screen projection and high-fidelity sound; a National Rental and Projection Service crew directed by Ray Swank, NAVA Secretary and NRPS officer, will handle the show.

"Wake-up breakfasts," a Convention innovation of last year, will precede both general sessions. Breakfast will be served right in the Terrace Casino from 8 a.m. until 9. Special entertainment will be provided during the breakfasts, including professional magic by Del Brece of Ideal Pictures, Inc., Miami, on Saturday; and the Audio-Visual Orchestra, directed by "Impresario" Tony Martucci of Martucci's Audio-Visual Service, Orlando, Fla., on Monday.

# World's Largest Audio-Visual Exhibit

Audio-Visual equipment and materials are the heart of any audio-visual program; they are also a major problem for any person professionally concerned with audio-visual teaching and training.

Each A-V technique demands knowledge of the capabilities and limitations of the required materials and equipment; each type of equipment offers particular and specific problems in selection and evaluation.

That is the major reason the Exhibit section of the National Audio-Visual Convention and Exhibit is particularly valuable to those persons attending the Convention. Not only does it offer the single opportunity annually to see every one of the major A-V lines and all the standard items of equipment and material on display, but also it presents a unique chance to bring oneself up-to-date on all the new developments and trends.

This opportunity was not always afforded to all those groups now attending the Convention and Exhibit. The first NAVA "show," held in 1946, was open only to NAVA members. Its 45 booths, although a far cry from this year's approximately 160 displays, offered a pretty thorough review of A-V items available then.

It was at the editorial suggestion of Paul Reed, editor of this magazine, in 1947 that the first additional group joined with NAVA to meet concurrently and enjoy the values attendant on inspection of the Exhibits. The Educational Film Library Association, until then meeting for its national conference at another locale, led the parade of organizations which have in the past and still do meet concurrently during this world's largest A-V session.

Much credit is due the leadership of the National Audio-Visual Association for their willing cooperation in making the Exhibit attendance possible for these groups.

Steady growth and increasing interest have been the keywords for the Convention and Exhibit ever since that first joint session in 1947, with around 1200 in attendance, till now the four-day NAVA show annually attracts more than 2400 persons from every segment of the A-V world.

The exhibits have grown in interest and value, too. Starting from a typical trade-show approach, A-V industry representatives have long since learned the values of co-operative effort to make the Exhibit the highlight of attendance at the Convention for not only A-V dealers but also for all other groups taking part. It has long been an accepted fact that the Exhibit is "the showcase of the A-V industry," and the exhibitors do all they can to make their displays and presentations among the outstanding ones of the year. Special demonstrations and literature are made available, and the exhibitors make a point of providing full information and aid to those representatives of leadership groups in the A-V world whose registration at concurrent Convention sessions carries with it the privilege of attendance at the Exhibit.

Through the years, the NAVA Exhibit has been held in the Sheraton Hotel; the Conrad Hilton; the Sherman and is now set up to occupy two entire floors of the Morrison Hotel, one of the world's finest sites. Completely air-conditioned, and with carpeted booth and exhibit space, the First Floor and Mezzanine of the Morrison provide excellent facilities for the world's largest display of audio-visual equipment and materials.

Don't miss your opportunity to see and learn; be sure to visit the Exhibit often and to seek out the displays of the standard lines as well as those of the new exhibitors.

**Advance Furnace Company**      **Booths N-94 & N-95**

2310 E. Douglas, Wichita 7, Kansas, FOrest 3-4232  
**Exhibiting:** Pixmobile Projector Tables, Optivox Easels, Pixmobile Book Trucks  
**Personnel:** C. W. DeVore, M. W. Briggs, K. B. Northcutt

**American Electronics, Inc.**      **Booth C-17**

655 W. Washington Blvd., Los Angeles 15, Calif., TEXas 0-7245  
**Exhibiting:** American AV-100 Tape Recorders, Stereo Sound, Automatic Tape-filmstrip Systems, Speaker Amplifiers  
**Personnel:** John Tait, Pete Morris, Frank Sossibe

**Marcellus Mfg. Co.** Booth K-57  
P. O. Box 2, Belvidere, Ill., LINcoln 4-3147  
Exhibiting: "Miracle" 16mm Sound Movie Projector  
Personnel: L. K. Marcellus, R. J. Marcellus, Geo. H. Schnell

**O. J. McClure Talking Pictures** Booth R-124  
1100 W. Washington Blvd., Chicago 7, Ill., CANal 6-1914  
Exhibiting: Sound Slide-film Machines, Record Players, Portable Public Address Systems  
Personnel: O. J. McClure, J. Harold Caesar, Robert LaCost, Mrs. L. W. LaCoste

**McGraw-Hill Text-Film Department** Booths M-69 & M-70  
330 West 42nd St., New York 36, N. Y., LONGacre 4-3000  
Exhibiting: Educational Films and Filmstrips  
Personnel: Fred T. Powney, James Dunlap, Norman Franzen, Godfrey Elliott, A. J. Rosenberg

- Robert C. Merchant** **Booth E-26**  
2701 Oxford St., Lafayette, Indiana; Phone: 20-7013  
Exhibiting: Custom equipment for use in language teaching and speech correction laboratories  
Personnel: Robert C. Merchant, Professor J. Collins Orr, W. G. Brill
- Miller Manufacturing Company** **Booth C-15**  
3310 E. Roxboro Rd., N.E., Atlanta 5, Ga., CEdar 3-8258  
Exhibiting: Miller Self-Adjusting Projector Tables  
Personnel: Lee W. Miller, Miss Regina Miller, Mrs. Lee W. Miller
- Mobile-Tronics** **Booth D-21**  
1703 Westover Rd., Morrisville, Pa., Cypress 5-3544  
Exhibiting: Mobile-Tronics Record Player and P. A. Unit, Mobile-Tronics Tape Recorder  
Personnel: Conrad A. Baldwin, Elizabeth C. Baldwin
- Moody Institute of Science** **Booth S-134**  
11428 Santa Monica Blvd., Los Angeles 25, Calif., GR 8-8287  
Exhibiting: "Sermons From Science" Films  
Personnel: G. Keith Hargett, Percy Bagge, Bal Reed, Don Campbell, Len Skibitzke, Hedley Parker, Joe Quinones
- Moody Monthly** **Booth S-128**  
820 N. LaSalle St., Chicago 10, Ill., Michigan 2-1570  
Exhibiting: "Moody Monthly" Magazine  
Personnel: Lawrence Zeltner, William Boyle, Evelyn Gardner
- \*The Meyercord Co.** **Booth R-120**  
5323 W. Lake St., Chicago 44, Ill., EStebrook 8-3700  
Exhibiting: Decalcomania transfers for films and AV equipment  
Personnel: D. J. Stockburger  
\* Tentative
- National Council of Churches** **Booth T-154**  
Dept. of A-V & Broadcast Education, 257 Fourth Ave., New York 10, N. Y., ORegon 4-6407  
Exhibiting: Audio-Visual Resource Guide, 1958-59 4th Edition; announcements for 1st National Executive Consultation on A-V Christian Education and 15th International Conference on A-V C.E.  
Personnel: Rev. Donald Kliphardt, Rev. J. Martin Bailey
- National Telefilm Assoc.** **Booth F-36**  
10 Columbus Circle, New York, N. Y., JUDson 2-7300  
Exhibiting: A new line of 16mm Home Movies, feature and short subjects  
Personnel: Milton J. Salzburg, Robert Kranz
- Neumade Products Corporation** **Booth T-147**  
250 West 57th St., New York 19, N. Y., JUDson 6-5810  
Exhibiting: Storage Facilities for Filmstrips, Slides and Moving Pictures, Film Splicers, Power and Hand Rewinds, Projection Stands and Editing Room Equipment  
Personnel: Lee E. Jones, Lew Grofsik, R. E. Hempel, John Freeland
- Newcomb Audio Products Co.** **Booth T-143**  
6824 Lexington Ave., Hollywood 38, Calif., HOLlywood 9-5381  
Exhibiting: Transcription Player/P. A. Systems, Portable Phonographs, Classroom Radios  
Personnel: Robert Newcomb, N. W. Hillstrom, Lee W. Maynard
- North American Philips Company, Inc.** **Booth G-41**  
230 Duffy Ave., Hicksville, L. I., New York, WElls 1-6200  
Exhibiting: Three-Speed Tape Recorder, Speakers, Enclosures and Microphones  
Personnel: J. F. Gerrity, Dwight Smith
- Ozalid Division** **Booths N-73 & N-74**  
General Aniline & Film Corporation, Johnson City, N. Y., BInghamton 7-2301  
Exhibiting: Ozalid Machines and Equipment Used in Local Preparation of Projectables for Overhead Projection  
Personnel: James Lemay, Art Smith, Don Scully, Allan Finstad
- Pentron Corporation** **Booth T-142**  
777 S. Tripp Ave., Chicago 24, Ill., SACramento 2-3201  
Exhibiting: Tape Recorders and Components, Tape Decks, both Stereo and Monaural and Preamps  
Personnel: Irving Rossman, George Royster, Hope Borowski, Bud Fields, Howard Vierow, Ted Rossman, Mary Marren, Mort Tillman, Bernie Sahlins
- Photo Methods for Industry** **Booth S-139**  
33 W. 60th St., New York 23, N. Y., PLaza 7-3700  
Exhibiting: "PM1"—a publication dealing with photography in industry  
Personnel: Milton Astroff, Jules Wartell
- Picture Recording Company** **Booth P-109**  
1395 W. Wisconsin Ave., Oconomowoc, Wis., LOGan 7-2604  
Exhibiting: "Pictur-Vision" Continuous Advertising Projectors, "Pictur-Vision" Projection Cabinets, "Solarbrite" Translucent Screens  
Personnel: G. E. Musebeck, George Howie, Mrs. M. L. Brown, D. Hale Darnold, D. E. Church
- Planoscope Corp.** **Booth U-158**  
551 Fifth Ave., New York 17, N. Y., MURray Hill 7-2327  
Exhibiting: Chart and Slide Lettering Materials—Mechanical Charts  
Personnel: H. M. Bradbury, Jr., Alexander Forest
- Plastic Products Inc.** **Booth T-145**  
1822 E. Franklin St., Richmond 23, Va., M1 8-8059  
Exhibiting: Vinyl Plastic Drapes for Light Control  
Personnel: Robert L. Withers, Sr.
- Polacoat Incorporated** **Booth M-63**  
9750 Conklin Rd., Blue Ash 42, Ohio, SYCamore 1-1300  
Exhibiting: "Lenscreen" Screens and Screen Materials for Daylight Use  
Personnel: L. M. Heath
- Polaroid Corporation** **Booths R-113 & R-114**  
Cambridge 39, Mass., UNiversity 4-6000  
Exhibiting: The Polaroid Transparency System  
Personnel: Kemon P. Taschioglou, Rolf M. Augustin, Miss Lloyd McDonnell
- Projection Optics, Inc.** **Booth M-72**  
330 Lyell Ave., Rochester 6, N. Y., GLENwood 3-0870  
Exhibiting: Transpaque Audio-Visual Aid Projector, Anamorphic Lenses  
Personnel: Fred Aufhauser, Phil Berman
- Psychotechnics Inc.** **Booth D-22**  
105 W. Adams, Chicago 3, Ill., DEarborn 2-6277  
Exhibiting: Reading Training Equipment  
Personnel: Dr. S. N. Stevens, Adeline Pruy
- Radiant Lamp Corporation** **Booth N-76**  
300 Jelliff Ave., Newark 8, N. J., BIgelow 3-6850  
Exhibiting: Radiant Projection and Exciter Lamps  
Personnel: Les Deutsch, Charles P. Goetz
- Radiant Manufacturing Corp.** **Booths J-51, J-52, J-53**  
8220 North Austin, Morton Grove, Ill., 1Rving 8-9000  
Exhibiting: Motion Picture Projection Screens  
Personnel: Milt Sherman, Harry Eller, Adolph Wertheimer, Hershel Feldman, Seymour Jacob
- Radio Corporation of America** **Booths F-33 & F-34**  
Front & Cooper Streets, Camden 2, N. J., WOODlawn 3-8000  
Exhibiting: New RCA "Life-Tested" 16mm Junior and Senior, Magnetic, Porto-Arc Projectors; the RCA "Scholastic" Line of Record Players and Tape Recorders  
Personnel: A. J. Platt, R. L. Cleveland, T. G. Christensen, R. N. Emerson, T. Lehman, W. D. Osborne, M. J. Yahr, A. C. Lindquist
- Frank K. Reid** **Booth E-31**  
1210 Westway Bld., McAllen, Texas, MU 6-7230  
Exhibiting: "Mira" Screen  
Personnel: Frank K. Reid, M. W. Huseman, Keith K. Reid

P. O. Box 13087, Houston 19, Texas  
Exhibiting: Projection Tables  
Personnel: Gus Rutherford  
\* Tentative
- Safe-Lock, Incorporated** Booth T-155  
870 West 25th St., Hialeah, Florida, TUxedo 8-9532  
Exhibiting: "Safe-Lock" Project-O-Stands and "Welt" Tripods for Industrial TV and Movie Cameras; "Safe-Lock" Drawing Stands  
Personnel: D. I. Welt, B. Childs, J. Childs
- Seal, Inc.** Booth L-61  
Brook Street, Shelton, Conn., REgent 4-1643  
Exhibiting: Educator Model Dry Mounting Press and Dry Mounting Materials  
Personnel: W. F. Miehle, W. Melnyk
- Allan E. Shubert Co.** Booth N-79  
3818 Chestnut St., Phila. 4, Pa., EVergreen 6-2979  
Exhibiting: "International Journal of Religious Education" and "Your Church" Magazines  
Personnel: William B. Shubert, Allan E. Shubert, Mrs. Mildred Leavitt, David Yancey, William S. Clark, J. Martin Bailey
- Spindler & Sauppe** Booth M-71  
2201 Beverly Blvd., Los Angeles 57, Calif., DUmkirk 9-1288  
Exhibiting: "Selectroslide" Projectors for 16, 48 and 96 Slides  
Personnel: George A. Sauppe, Norman A. Sauppe, Albert J. Schnurpfeil
- Squibb-Taylor, Inc.** Booth O-100  
1213 S. Akard, Dallas 2, Texas, RIverside 7-3596  
Exhibiting: Taylor "Spotlight" Opaque Projector, Taylor Adjusto Stand, "Spotlight" R-2 Projection Table, "Spotlight" Pointer  
Personnel: Clif Squibb, Jody Damron
- Standard Projector & Equipment Co., Inc.** Booths F-37 & F-38  
7106 Touhy Ave., Chicago 31, Ill., NIlles 7-8928  
Exhibiting: Complete Line of Projectors for Filmstrips and 2x2 Slides, Filmstrip Previewers, Beaded and Silver Screens  
Personnel: Pat J. Kilday
- Sylvania Electric Products, Inc.** Booth K-58  
Photolamp Division, 1740 Broadway, New York 19, N. Y., JUdson 6-2424  
Exhibiting: Sylvania Photographic Lamps  
Personnel: R. B. Martenson
- Technical Service Incorporated** Booths I-47 & I-48  
30865 W. Five Mile Road, Livonia, Mich., KE 3-8800  
Exhibiting: TSI 16mm Sound Motion Picture Projectors, DeVrylite, Duolite, Suitcase and Moviematic  
Personnel: Paul E. Ruedemann, Geo. Collins, Wally Moen, E. H. Lerchen
- \*Teclar Aluminum Company** Booth B-13  
1520 Mercer St., Seattle, Washington  
Exhibiting: Projection Screens  
Personnel: Ernest J. Gottula  
\* Tentative
- Tele Prompter Corporation** Booth M-66  
311 W. 43rd St., New York, N. Y., JUdson 2-3800  
Exhibiting: TelePro "6000" front and rear screen projection, Custom Lectern, Language Translator, TeleMation (effects automation), TelePrompter Cueing Equipment  
Personnel: Herbert Hobler, Ted Boisumeau
- United States Projector Corporation** Booth S-125  
Delaware Bldg., Federal Way, Washington, TRinity 8-3500  
Exhibiting: 16mm Strip Projector and Camera Equipment  
Personnel: Charles H. Anderson, J. R. Cissna, John Randall, Jr., L. S. Packard, Gideon Kramer
- United World Films, Inc.** Booth R-110  
1445 Park Ave., New York 29, N. Y., TRafalgar 6-5200  
Exhibiting: Educational, Universal International and J. Arthur Rank features; Castle Home Movies; U. S. Gov't Films; Religious Films, etc.  
Personnel: Murray Goodman, J. M. Franey, John D. Desmond, Frank Mannarelli, Arthur Hahn, A. L. Karpinski
- V-M Corporation** Booth T-140  
280 Park Street, Benton Harbor, Mich., WAlnut 5-8811  
Exhibiting: Tape Recorders, Phonographs and Speakers  
Personnel: C. J. Stevens, Joe Searfoss, Jim Fitzsimmons, Bob Fissell
- Varigraph Company** Booth S-138  
841 W. Lakeside St., Madison 1, Wisconsin, ALpine 6-7679  
Exhibiting: Varigraph Lettering Instrument and Templates  
Personnel: L. J. Jenson, F. W. Chamberlin
- Vari-Typer Corp.** Booth C-16  
720 Frelinghuysen Ave., Newark 12, N. J., BI 2-2600  
Exhibiting: Office Composing Machines  
Personnel: George Robinette
- Victor Animatograph Corporation** Booths R-111 & R-112  
Plainville, Conn., SHerwood 7-1663  
Exhibiting: Complete Line of Victor 16mm Sound and Silent Motion Picture Projectors, Victor Viewers, Soundview Filmstrip and Sound Slidefilm Projection Equipment  
Personnel: Hy Schwartz, Horace O. Jones, Leila A. Virdone, John J. Harnett, Mort Goldberg, Jack Lewis
- Victorlite Industries, Inc.** Booths N-92 & N-93  
4117 W. Jefferson Blvd., Los Angeles 16, Calif., RE 2-4033  
Exhibiting: VisualCast Daylight Overhead Projectors, Packaged Visuals for use with Overhead Projectors, Techniques for Local Preparation Daylight Overhead Projector Materials  
Personnel: James J. Fitzsimmons, Robert J. Brady, Joseph Haslinger, George Post, Clyde Hollingsworth
- Viewlex, Inc.** Booths O-96 & O-97  
35-01 Queens Blvd., Long Island City 1, N. Y., EXeter 2-0100  
Exhibiting: Combination Slide and Filmstrip Projectors, Sound-slide Filmstrip Projectors, Automatic Slide Projectors, Sound Equipment  
Personnel: M. R. Abrams, Ben Peirez, W. G. Dwinell, R. H. Yankie
- Wallach & Associates, Inc.** Booth S-130  
1589 Addison Road, Cleveland 3, Ohio, SWeetbriar 1-5580  
Exhibiting: Discabinets, Tape Recording Reel Cabinets, Film Separator Racks, Reelmobiles  
Personnel: Charles D. Wallach, Arthur Wallach, Larry Oliver, Alvin Tengler, Mrs. Arthur Wallach
- Webcor, Inc.** Booths T-151 & T-152  
5610 W. Bloomingdale Ave., Chicago 39, Ill., TUxedo 9-8500

Exhibiting: Filmstrips  
Personnel: T. C. Morehouse, Jr., Harold Baumstone

# THE NATIONAL INSTITUTE FOR AUDIO-VISUAL SELLING

By Frank Creasy, Chairman  
W. A. Yoder Co., Richmond, Va.

One of the strongest needs in the audio-visual field is for *understanding*, on the part of both dealers and A-V users, of each other's problems.

The A-V dealer's business depends on his personal fulfillment of a unique function, made up of many factors.

He must be not only a supplier of *specialized* equipment, designed and built to take the brunt of heavy-duty A-V use, but also he must be able to bring a wide range of skill and knowledge to the problems of his customer. He has become in the last decade more and more a specialist in communications through sight and sound, for many applications. He must *know the customer's needs*; he comes to the customer, and he keeps coming back *after the sale*: to instruct in proper use of equipment, to counsel in provision of useful materials, and to service what he sells.

All of these actions on the dealer's part require personal and professional background in audio-visual materials, equipment and applications. He can find what he needs at the National Institute for Audio-Visual Selling.

It was to meet these needs that the National Institute for Audio-Visual Selling was created by the National Audio-Visual Association just ten years ago. NAVA sponsors the Institute just before Convention each year at Indiana University, where the acknowledged leaders throughout the audio-visual industry join their skills and talents with the highly qualified instructors of the University School of Business and Economics and the world-renowned University Audio-Visual Center.

The four-day Institute courses have been carefully researched, revised and constructed over the past decade to produce a *practical*, visualized, high-speed learning experience in each of four areas: Salesmanship, Applied Selling, Sales and Business Management, and Preparation and Use of Audio-Visual Materials.

New and dramatic methods are used, carefully integrated with successful methods tested through the years. For instance, this year's group in Salesmanship will work with role-playing, applying this "psychological drama" to sales situations and demonstrations.

... and always demonstrate from the operator's angle.

The Preparation and Use of A-V Materials course combines much of the information and practical techniques of low-cost A-V production into actual experiences and activities, for the participants. This course has done much to spread the word on "local production" throughout the country.

Today's "Instructional Materials" concept is so much broader than in the days of the "projector peddlers"...

Members of the National Audio-Visual Association return to the Institute year after year, not only to complete a course a year but also to keep themselves thoroughly informed and ready to carry on the role of personal audio-visual consultants to their customers.

The Tenth Anniversary Institute is directed by a Board of Governors including myself (Frank Creasy, W. A. Yoder Co., Richmond, Va.) as Chairman; Al Hunecke, the Du-Kane Corp., St. Charles, Ill., vice-chairman; Prentice C. Ford, American School Pub. Co., New York, secretary; Miss George Allen, Family Films, Inc., Hollywood, Calif.; Howard Holt, Audio-Visual Film Service, Inc., Birmingham, Ala.; Howard F. Kalbfus, Sales Training Center, Eastman Kodak Co., Rochester, N. Y.; Guy Lam, Midwest Visual Equipment Co., Chicago; J. K. Lilley, J. P. Lilley and Son, Harrisburg, Pa.; Joseph Meidt, Cousino's, Inc., Toledo, Ohio; Kalman Spelletich, Davenport, Iowa; James P. Thompson, Concordia Films, St. Louis, Mo.; Mrs. Ann T. Vath, L. C. Vath Audio-Visual Aids, Sharpsville, Pa.; Russell Yankie, Viewlex, Inc., and Charles Beseler Co., St. Petersburg, Fla.

NAVA President William W. Birchfield, Alabama Photo Supply, Montgomery, Ala., is a member of the Board, ex officio; Don White, Executive Vice-President of NAVA and Henry C. Ruark, Jr., NAVA Director of Information, assist with Institute activities.

Dr. K. C. Rugg, Associate Director of the University A-V Center, is Institute Staff Chairman there. L. C. Larson, Director of the A-V Center, E. L. Richardson, supervisor of marketing, and Marvin Dawson, assistant marketing supervisor, also serve as Institute staff at Indiana.

Cartoons by Mrs. Sonia Schwartz, graphic artist, University of Michigan, Audio-Visual Education Center, are reprinted, with permission, from the university's "Audio-Visual in Education," student's reading outline for Course Education D-100.

# PROGRESS: Publications and Projects

**Progress: Publications and Projects . . .** that's just about the story of the last year's work of the Audio-Visual Commission on Public Information.

In the Convention issue of Educational Screen and A-V Guide just a year ago Dr. Charles Schuller, my predecessor as chairman of AVCOPI, reported on the short history of the organization, and some of its accomplishments. He pointed out that the Commission was organized to fill a need for a national cooperative agency to tell the A-V story and thus to improve instruction in American schools.

Then, AVCOPI had three major projects under way: a photo-story book to visualize effectively the basic A-V idea; a summary of research on which our beliefs in A-V are based; and a visual presentation suitable for general audiences.

Now, I can report that not only are all three projects completed and published, but that the distribution figures are beginning to be quite impressive.

For instance, since it was introduced at Convention last year, GATEWAY TO LEARNING has won enviable plaudits as a most effective photo-story about A-V . . . and nearly 100,000 copies are in circulation.

A CRISIS IN EDUCATION, the simple graphic summary of A-V research over the years, has run into nearly 50,000 copies, and has been reprinted by several large A-V manufacturers for nationwide distribution besides.

And CASE OF THE CURIOUS CITIZEN, the hard-hitting color slide set, complete with LP-recorded commentary, a script, and an effective utilization guide, has run through a large part of the first production run already and demand still continues.

Other earlier AVCOPI publications continue to work hard with your audiences. TELLING YOUR A-V STORY, the guide to public relations for A-V and the Commission's "yardstick" statement on A-V budgets and minimum equipment standards are still in demand, and have been widely reprinted.

AVCOPI has been working steadily on other important projects, too. The new booklet on budgeting for an A-V program is moving ahead under the direction of Dr. K. C. Rugg of Indiana University's Audio-Visual Center; an A-V handbook for school administrators is in final stages of copy preparation and layout planning; AVCOPI photo files are being transferred to the new NEA animated morgue for easier access to A-V illustrations; a booklet titled A-V ON THE AIR, setting forth workable ways to make use of television and radio to promote the A-V idea, is in process of final layout and art planning; and a group of tape recordings about A-V are under preparation.

A public relations kit intended for business and industry use is being prepared for a test run. It will contain copies of each publication and of CURIOUS CITIZEN, as well as a utilization guide and other materials.

The Commission has also been working steadily with many of the magazines and other periodicals, furnishing information and aid either on pieces about A-V or for general pieces on education.

One of the major publication projects of the year was the special *Spotlight Report* in BETTER SCHOOLS, the monthly newspaper published by the National Citizens' Council for Better Schools and widely circulated to citizens' groups and school improvement councils throughout the nation. Conceived by Henry C. Ruark, Jr., of NAVA,

By Harold E. Hill,  
Chairman  
Audio-Visual Commission on Public Information  
University of Illinois

the *Spotlight Report* was prepared by Hank and by Harold Highland of the Graphic Communications Center, and contained articles on "The Quiet Revolution In Education" by Kitty Welch of DAVI, on equipment by Ruark, on "How A-V Can Help" by Schuller, on "Planning the A-V Budget" by L. C. Larson of Indiana University, and on a typical A-V program by Harry W. Gross, Supt. of Schools in Merrick, N. Y.

The *Spotlight Report* on Audio-Visual Education is available from BETTER SCHOOLS, 9 East 40th St., New York 16, N. Y.; cost is \$1 per hundred copies. Ask for the *Spotlight Report* from Vol. 4, No. 4, April, 1958.

The work of the Commission is continuing, and there are even more projects in the planning stages.

But none of these A-V public relations tools, proven effective though they are, means a thing if you are *not using them!* They are each designed for use at the LOCAL level by LOCAL people who will adapt the presentation to LOCAL conditions.

YOU are probably represented on the Commission through one or more of the agencies taking part—the Department of A-V Instruction of NEA; the Educational Film Library Association; the Association of Chief State School Audio-Visual Officers; the American Association of School Librarians; the National Council of Churches; the National Association of Educational Broadcasters; the University Film Producers Association; the A-V Communications Division, National University Extension Association; and the National Audio-Visual Association.

As a coordinating, planning and producing agency, the Commission is always on the alert for suggestions and ideas, always ready to help with problems and projects, from school administrators, a-v personnel, and any others with a primary interest in improving instruction in American education.

To tell the A-V story "loud and clear" demands the

effort and support of every A-V person and every A-V group.

Long after the glare and roar and the unearthly light of Sputnik and Vanguard have died away, the problems of American education will remain. It's your job and mine to apply the effective and proven tools of audio-visual instruction and to win the public understanding and approval which is demanded as a prerequisite.

## Tools For Telling The A-V Story

Are YOU using the effective public relations tools for telling the A-V story, prepared by the Audio-Visual Commission on Public Information?

Here is a simple checklist—scorecard; think of your major problems in communicating with *your* public, and then *score yourself* here on your efforts to use these proven tools! (20 points for each one you are using.)

P.S. This same list makes a very handy way of listing what you need to order from the Commission, at Room 2230, 250 West 57th St., New York 19, N. Y. All publications are sold *at actual cost* of production; all funds are devoted to bringing you still more effective audio-visual public relations tools.

	Score	Order
A CRISIS IN EDUCATION		
Graphic summary of A-V research (\$3.50 per hundred; 1-99, 4c each)	-----	-----
GATEWAY TO LEARNING		
Photo-story of the A-V idea (\$10 per hundred; 1-99, 11c each)	-----	-----
TELLING YOUR A-V STORY		
A-V public relations guide (\$8 per hundred; 1-99, 10c each)	-----	-----

## THE CASE OF THE CURIOUS CITIZEN

Color 36-slide set, 2x2", with record and script, \$2.00 each; sf filmstrip, 50c

## A-V FACILITIES FOR NEW

### SCHOOL BUILDINGS

Minimum essentials checklist

(\$3.50 per hundred; 1-99, 5c each)

MY SCORE: -----

## A-V "Check-List" Ready

Explaining the necessity of including audio-visual facilities in new classroom and educational building construction has long been a problem for all audio-visual people. It's tough to explain a-v requirements to someone who doesn't understand what audio-visual instruction *does* and *is*.

NOW the Audio-Visual Commission on Public Information has *done something* about this problem. The Commission has adapted a specially prepared and time-tested checklist worked out in practical field use by the Wisconsin Dept. of Audio-Visual Instruction.

Titled "Audio-Visual Facilities For New School Construction," the checklist is now ready for your use as a working tool with all kinds of persons interested in new schools . . . parents, educators, school board members, architects.

A single copy can be had on request; cost for additional copies is: 5c each in lots of less than 100; \$3.50 per hundred; \$30 per thousand.

Write to AVCOP, Room 2230, 250 West 57th St., New York 19, N. Y.

# Religious Audio-Visual Conference

Sunday, July 27, 1958 — 11:00 a.m.; 2-6 and 7:30-9 p.m.  
Hotel Morrison, Madison and Clark, Chicago.

This all-day program of worship, inquiry, demonstration and discussion is of great interest to every user—beginner or expert—as well as to every producer and distributor of audio-visual equipment and materials for church use.

This is the third such annual meeting held in conjunction with the coordinated national A-V convention and exhibition, although its roots go back at least through 15 years of annual week-long religious A-V workshops. Originated in 1944 by the Department of Audio-Visual and Broadcast Education of the National Council of Churches of Christ in the U.S.A., these international A-V workshops have been a major stimulus to the progress of the A-V medium in the service of the church. The first was held at North Park College, Chicago; most of those following yearly were at Green Lake, Wisconsin; this year's will be at State College, Pennsylvania, August 17-23.

### Why the Chicago Program

Chicago's annual audio-visual conventions, coordinated with the NAVA Exhibit, long lacked representation of one of the principal areas of audio-visual communication, namely the church field. Just before the National Council moved its headquarters from Chicago, its Department of AV and Broadcast Education undertook to fill that gap

with a one-day program dealing with audio-visuals in the service of the church for worship, education, evangelism, stewardship and other functions. The Audio-Visual Committee of the Church Federation of Greater Chicago has since carried the responsibility for the annual meeting, except only for the morning worship service, which continues to be arranged by headquarters in New York.

### Sunday Morning Worship Service

This service, at 11:00 a.m. in the Terrace Casino, is under the direction of the *Rev. Alva Cox*. Presenting a worship service of beauty and reverence, it will also demonstrate the helpful role of the properly chosen and applied motion picture, slide projection, recorded music, public address and other electronic resources. The featured sermon film, "*The Guest*," was produced some years ago by a major studio; its choice points up the fact that a good film can and should be used again and again, and for perhaps a variety of purposes, long after its newness has worn off.

### Everybody Shares In Unique Quiz Program

From 2:00 to 3:00 Sunday afternoon all registrants participate in a unique "Information, please?" type of quiz program, the purpose of which is to assemble all possible questions in anyone's mind on audio-visual equipment and materials as well as their procurement, servicing and utilization. The genial chairman of the two afternoon sessions will be *Dr. John W. McGracken*, Associate Secretary of the National Council of Presbyterian Men and former

chairman of the Chicago Church Federation Audio-Visual Committee.

After all the questions are in, all participants will join one of five special interest groups, which, under well qualified "captains," will go out into the vast exhibition hall to seek authoritative answers from the hundreds of expert resource people who have charge of the exhibits. After refreshments, from 4 to 4:30, their findings will be shared in the (4:30 to 6:00) reconvened session. The "captains" designated are *Rev. John Gable* (equipment group), *Arlo Rasey* (films), *Rev. Paul Shults* (filmstrip and slide), *Rev. Rudolph A. Hartman* (audio), and *Miss M. R. Ferguson* (non-projected materials).

#### Evening Session: "Challenge!"

A highly interesting and probably quite provocative discussion meeting starts at 7:30 p.m. on the theme: "*The CHALLENGE of the Audio-Visual Media.*" *Dr. S. Franklin Mack*, Executive Director of the Broadcasting and Film Division of the National Council of Churches, will discuss this challenge from the viewpoint of the producer; *William S. Hockman*, Church Department editor for *Educational Screen & A-V Guide* magazine and Director of Religious Education for the Presbyterian Church, Glens Falls, N.Y., will outline the challenges offered by the AV media to the church user.

These nationally known speakers are as noted for their frankness as they are famed for their wit. When they have made their presentations, producers and users will be asked to respond and, possibly, rebut. *Rev. Don Kilphardt*, Administrative Assistant in the NCCC Department of Audio-Visual and Broadcast Education, will preside.

#### The Chicago Committee

The Committee on Audio Visual Education has for 15 years been an active agency of the Division of Christian Education, Church Federation of Greater Chicago. Its function is to help both professional and lay leaders in local churches to plan, select and make effective use of audio-visual equipment and materials to stimulate learning and related activities in church groups. The Committee's activities include 1) a monthly preview of materials suited to and timed well in advance of the principal church emphases, 2) four evaluation committees in the National Council's "Audio-Visual Resource Guide" program; 3) special previews and similar services for church groups such as the Missions Institutes sponsored by the United Church Women of Greater Chicago.

In short, the Committee assists in coordinating the efforts of various audio-visual forces in the Chicagoland area for more effective use of the A-V medium in the total program of the church.

Present chairman, elected by the Division of Christian Education, is *Mrs. Mae Bahr*, librarian for Religious Film Libraries, Chicago. Vice-Chairman is *Rev. Paul Shults*, associate minister of the 43rd Avenue Presbyterian Church of Gary, Ind., secretary is *Mr. Wesley Ross Doe*, manager of the Baptist Film Library, Chicago. Approximately 30 clergymen and lay people actively interested in audio-visuals are members of the committee, by invitation.

NOTE: The \$3.00 registration fee for the Religious Audio-Visual Conference includes admission to the otherwise highly restricted A-V Exhibition, as well as to open sessions of contiguous groups. The Exhibits open Saturday noon. Those wishing to register prior to Sunday may do so by specifying at the NAVA registration desk that they are signing up the religious AV conference.

Why not plan an early visit  
to the Educational-Screen  
Exhibit — Booth N-89

This year EFLA is celebrating its Fifteenth Anniversary. It was organized in the fall and winter of 1942-43 and officially incorporated as a non-profit educational association in April, 1943. First President of EFLA was L. C. Larson who was at that time on leave from Indiana University to work with the American Film Center in New York. Elizabeth Harding, later Mrs. John Flory, was the first Executive Secretary. Both Mr. Larson and Mrs. Flory will participate in the anniversary celebrations of EFLA in Chicago during EFLA's 15th Annual Conference, July 25-27.

The Educational Film Library Association was founded to "promote the production, utilization, and distribution of educational films." Its specific aim is to serve its members who are primarily film librarians, audio-visual directors, and others in charge of audio-visual programs in schools, colleges, universities, public libraries, art galleries and museums, religious organizations, labor groups, and others concerned with any aspect of education or cultural enrichment. Perhaps its major service has been the establishment and continuance of the EFLA Evaluations. First issued in 1946, these critical appraisals of 16mm films by accredited, unbiased committees according to a form developed by Dr. Edgar Dale now total over 3500 different titles. Three hundred or more new Evaluations are distributed annually to each EFLA member, in the form of 3x5 cards which can be interfiled to build up a permanent expanding file of information. Over seventy-five Evaluation Committees, each under the leadership of an EFLA member, are active in reviewing new films according to the criteria established by EFLA and described in the publication *A MANUAL FOR EVALUATORS OF FILMS AND FILMSTRIPS*, which was prepared by EFLA and published in three languages by UNESCO for international distribution.

Other EFLA services include a monthly newsletter, entitled the *EFLA Bulletin*, which lists new films and carries news and articles; *Service Supplements* which often include selected film lists like the recent *FILMS AND FILMSTRIPS IN ARCHAEOLOGY*; *Film Review Digest* which includes excerpts from reviews of films from a variety of periodicals; and information services of various kinds for the benefit of the members. EFLA also holds an annual Conference in Chicago in July, and regional Conferences from time to time.

The current President of EFLA is Erwin Welke, Director of the Audio-Visual Extension Service of the University of Minnesota.

EFLA plans for the immediate future include more regional meetings, continued expansion of the Evaluation program, a new handbook, to be published in the fall, on Film Library Administration, and such other projects and services as will serve the needs of EFLA members and of the audio-visual field.

## EFLA's Fifteenth Annual Conference

A retrospective look at educational films of 1948 and 1943 will be one of the highlights of the 15th Annual Conference of the Educational Film Library Association, to be held in Chicago at the Morrison Hotel on July 25-27. The program this year has been condensed into two and a half days, so that members and others who are planning to attend will be able to do so without interfering with summer school sessions and other activities. Other features of the meeting will be: an address by Stanley Andrews, Director of the National Project in Agricultural Communications who has done outstanding work in using a variety of media

to reach a wide audience effectively; an opportunity to see new and unusual films, including the prize-winning experimental film *N.Y., N.Y.*, recently shown at Brussels, and *MURDER ON THE SCREEN*, a Dragnet-type epic with a message for all film librarians; an evaluation screening of the newest educational films; a demonstration of techniques for local production of 16mm motion pictures; discussion sessions on topics dealing with film library operations, the role of the public library and art museum, use of films in industry, church and other fields; and the annual EFLA reception at which the Board of Directors will be hosts to EFLA members and guests.

At the retrospective screening, it is planned to show films from 1943, the year in which EFLA was founded, and 1948, ten years ago, and compare them with films on the same general subject produced in 1958. The panel and the audience will have a chance to see what progress is being made in film production and to discuss whether the new films are really more effective as teaching tools. Mrs. Elizabeth Flory, who helped establish EFLA's original film evaluation program, will be on hand to explain how the program started and developed.

The "How-To-Do-It" session, which proved so popular in the past two years, has been expanded this year to provide demonstrations of equipment and techniques which can be used in making inexpensive, locally produced 16mm films. John Molstad of the Audio Visual Center at Indiana University is setting up the demonstrations, and those who attend will have a chance to see the equipment and how it can be used.

**EFLA Conference chairman, Dr. F. A. White (left) Director, Bureau of Audio-Visual Service, University of Wisconsin, and Dr. Philip Lewis, Director, Bureau of Instructional Materials, Chicago Public Schools. Dr. Lewis also serves as Technical Editor of Educational Screen and Audio-Visual Guide. An "electric film analyzer," visualizing film evaluators' reactions, is shown in use.**

Discussion sections are always a major part of an EFLA Conference, and this year they will be held on a wide variety of subjects. One group will deal with problems of practical administration of film libraries, including cost of bookings, postal requirements and services, and audio-visual budgets. Another group will take up the use of films with special audiences—film study groups, golden age clubs, and children's screenings. There will be a special series of cooperative sessions in which EFLA members will meet with representatives of other organizations which will be holding sessions during the National Audio Visual Convention. These include Medical and Allied Sciences, Agricultural AV Workshop, Religious AV Workshop, Industrial Training Directors Workshop, and the Industrial Audio Visual Association. Questions to be discussed at the cooperative sessions include how EFLA and the other groups can work together to get better distribution and utilization of materials of mutual interest.

Topics which are currently of major importance in audio-visual education will be discussed during the Friday afternoon sessions, when there will be sections on the use of

# Educational Film Library Association

AV materials in the education of the gifted child, and the development of complete courses on film. The present status of audio visual courses in library schools will be analyzed, and suggestions will be made on programming films in the public library. The inter-relationship between industry and education in the use of films and other audio-visual materials dealing with human relations will be another discussion topic.

In addition to screenings, discussions, and the Annual Business Meeting of the Association, there will be informal social events to allow opportunity for talking shop and renewing old acquaintanceships and forming new ones. The traditional Reception by the Board of Directors for all EFLA members and friends will be held on Friday night, when refreshments will be served. The luncheon meeting on Saturday, when Stanley Andrews will speak, will be an important EFLA gathering, and on that same evening, EFLA members have been invited to join NAVA at its Dance Party.

The whole 15th Anniversary Conference will be summed up on Sunday morning, when Neville Pearson of the College of Education of the University of Minnesota will give a slide presentation with running commentary, showing the events of the Conference right up to the moment of the presentation. After the business meeting, Galon Miller of the South Bend schools will moderate a debate on kinescopes, their potentialities and shortcomings, under the title "What's Wrong with Kinescopes?" EFLA sessions will end in time for EFLA members to attend the joint AV Church Worship Service and to visit the NAVA Trade Show.

With a theme of "Looking into EFLA's Crystal Ball—Past, Present, and Future," EFLA will take the opportunity at its 15th Annual Conference to trace the developments of audio-visual education in recent years and to look ahead to the possibilities of the next fifteen years.

## PROGRAM OF EVENTS

### FRIDAY, JULY 25

- 9:00 a.m. - 5:00 p.m. **Registration**—in EFLA office in the Walnut Room, Morrison Hotel, Chicago.
- 10:00 - 11:15 a.m. **Screening of Art, Experimental, Adult, and Unusual Films.**  
A chance to see some films that are new and different. Feature presentation will be a showing of *N. Y., N. Y.*, an experimental view of New York by Francis Thompson which won a medal in Brussels.
- 11:15 - 11:30 a.m. **Welcome by EFLA's President, Erwin Welke.**  
Introduction of Conference Chairman, F. A. White.
- 11:30 a.m. - 12:15 p.m. **Briefing of all Panel Participants.**
- 1:30 - 3:00 p.m. **Three concurrent discussion sections on special problems of today.**
- A. Complete Courses on Film—reports and discussions on several projects now in production or completed.  
Chairman: F. A. White, University of Wisconsin.  
EBF Physics Series—Warren Everote, EBF.  
Humanities—Floyd Rinker, Council for a TV Course in Humanities for Secondary Schools, Boston.  
Using a Filmed Course—Donald Scott, University of Wisconsin.
- B. Current and Future Status of AV Courses in Library Schools.  
What are the library schools doing to prepare librarians for work with audio visual materials in public libraries and schools?
- C. Human Relations in the Industrial Training Film Program.  
How are industrial organizations using films to train supervisory personnel, and to improve employee morale?
- 3:15 - 4:45 p.m. **Three concurrent discussion sections on special audiences for AV materials.**
- A. Using AV Materials to Enrich the Program for the Gifted Child.

Chairman: Galon Miller, South Bend Schools.  
Panel, including Walter Wittich, U. of Wisconsin, and others.

B. Film Programs to Bring New Patrons to the Public Library, Art Gallery or Museum.  
Reports on successful programs, with examples of some of the films which have been used.

C. University Film Libraries Serve Industry in Their Area.

What is the responsibility of the university film center in providing guidance and audio visual materials to industry?

Chairman: Edwin Welke, University of Minnesota.

7:30 - 10:00 p.m. **Screening and Evaluation of New Educational Films.**

A critical look at newly released films on a variety of topics.

Chairman: Dr. Maurice Iverson, University of Wisconsin, Panel of Evaluators.

10:15 - 11:00 p.m. **Reception for all Conference Registrants.**  
The annual Reception of the Board of Directors. Refreshments.

### SATURDAY, JULY 26

9:00 a.m. - 5:00 p.m. **Registration, EFLA Office.**

9:00 a.m. - 12:00 noon **Two concurrent sessions—one for Film Library Administrators, one for Program Planners.**

A. Practical Problems facing the Film Librarian and AV Director.

1. The cost of processing film bookings.

Chairman: Thomas Boardman.

2. Getting the most out of the postal service.

Chairman: Lee Cochran, University of Iowa.

3. Setting Up an AV Budget—in different types of institutions.

B. Film Programs for Special Groups.

1. Film Study Groups and the Use of Feature Films.

2. Film Programs for Golden Age Groups.

Chairman: Forrest Mills, Racine Public Library.

3. Selecting Films for Children's Screenings.

Chairman: P. W. Johannes, Museum of the City of New York.

12:30 - 2:00 p.m. **Luncheon and Speaker.**

Speaker: Stanley Andrews, Director, National Project in Agricultural Communications.

2:15 - 3:30 **Concurrent sections on topics related to the work of other groups meeting during the National Audio Visual Convention.**

General Topic: What Can EFLA and These Groups Do for Each Other?

A. Medical and Allied Sciences.

B. Agricultural AV Workshop

C. Religious AV Workshop—Mrs. Mae Bahr, Religious Film Libraries.

D. Industrial Training Directors Workshop—Paul Wright, Abbott Lab.

3:45 - 5:45 p.m. **Production Workshop for Non-Professionals.**  
Demonstrations and discussions of new equipment and techniques of interest to those doing local production of 16mm films, filmstrips, and recordings.

Chairman: John Molstad, Indiana University.

7:30 - 10:00 p.m. **Then and Now—EFLA's Fifteenth Anniversary Film Screening and Evaluation.**

"Are the Films of 1958 Doing a Better Job Than Those of 1943 and 1948?"

Comparative screenings of films on similar topics.

Panel including Elizabeth Flory, L. C. Larson, and others.

10:00 p.m. on **NAVA Dance Party—EFLA Members are invited to attend.**

### SUNDAY, JULY 27

9:30 - 10:15 p.m. **"Past, Present, and Future—Looking Into Our Crystal Ball on EFLA's 15th Anniversary."**

1. Summary of the 1958 Conference—Slide Presentation.

2. EFLA Up to Now—Administrative Director's Report.

3. Looking Ahead—EFLA President Erwin Welke.

Business Meeting.

10:15 - 11:00 a.m. **"What's Wrong with Kinescopes?"—A Debate.**  
Moderator: Galon Miller, South Bend Schools.

11:00 a.m. - 12:00 m. **Joint AV Church Worship Service—An interfaith service for all persons attending the Conference.**

All Afternoon **NAVA Trade Show—Admission by EFLA Badge.**

# Audio-Visual Workshop For Agricultural Leaders

This will be the fourth annual Vo-Ag workshop. Many agricultural leaders across the country have adopted it each year as their one big opportunity for professional improvement. This year we stress the fact that there is a great need for improvement of equipment for more effective teaching. Ag leaders are calling for less bulky equipment—"transistorized" wherever possible, because most of their work is done in the field with farmers. Events are as follows:

## MONDAY, JULY 28

**How to Show Slides Smoothly**—Dr. George F. Johnson. Explanation of his unusual "fanning" technique in which each slide "fades" into another in his presentation, giving the viewer the impression he's seeing a movie, rather than a slide show.

**How to Take Better Pictures**—Jim Robbins, Graflex, Inc. Better technique with both crown graphic and 35mm cameras explained.

**How to Produce Better Tapes for Teaching**—representative of Bell & Howell.

**Slide Clinic**—Dr. George F. Johnson.

## TUESDAY, JULY 29

**How to Take Better Pictures II**—Jim Robbins, Graflex, Inc.

**Practical Movie Tips**—J. A. Smith, visual aids specialist, University of Georgia and 1957 recipient of the Farm Film Foundation Award.

**How to Apply the Polaroid Transparency System to Agricultural Teaching**—Dr. George F. Johnson. Excellent slide presentation.

**Audio-Visual Seminar**—panel of experts. Questions from the floor.

Dr. George F. Johnson, visual aids specialist at Pennsylvania State University and audio-visual editor of COUNTY AGENT & VO-AG TEACHER.

## in summing up ————— BY GORDON L. BERG

Tape recorders, 16 mm projectors, loud speaker systems and other bulky systems have always made me frightfully uneasy. No matter how much they are considered the tools of an ag leader's trade, they never seem to be any less cumbersome from year to year. It always seemed to me that "these guys have to lug 'em around—why shouldn't they have a say in how the machines are designed?"

(We think that no two people are alike—and each ag leader has his own ideas on equipment—but for every per-

son who likes a machine, there's another guy who's ready to throw up his arms in disgust for the entire program at the mere mention of it. Reason: he's too weighted down now.)

*Apparently, someone did a terrific job of selling equipment back in the old days, because we found in a recent survey that a lot of equipment was purchased 20 or more years ago—and was never replaced. What was wrong? We think that the WHY of this audio visual equipment was completely overlooked in the selling campaign.*

Your major purchases on that cramped budget of yours consist of equipment. There comes a time when audio-visuals take a good size hunk of it. Doesn't it make sense, then, that you should get as well acquainted as possible with your local audio-visual dealer and the entire field in which he works? There's one thing for sure: you'll save a lot of money and with those savings you'll get a lot more equipment!

*A really big plus factor about our Audio-Visual Workshop for Ag Leaders is that you can get acquainted with the keenest audio-visual dealers, salesmen, and demonstrators in the business. They'll be attending the national audio-visual convention and, of course, the magnificent Exhibit.*

These fellows will tell you whether or not you're being "taken" back home when buying audio-visual equipment. Put in a more positive way, they'll tell you how to get a better deal with your A-V dollar.

*Members of this magazine staff have been hobnobbing with audio-visual folks in all lines the past half-dozen years and we've never known a finer group of men anywhere. They've built a most reputable organization (National Audio-Visual Association), with sincere, hard-working leadership!*

*Interesting observation:* Last summer when vo-ags held their national convention here in Philadelphia, I dropped in to see a good friend of mine in his audio-visual store (one of the largest in the country). Whom should I see leaning over a counter discussing equipment, but two vo-ags who had attended our audio-visual workshop in Chicago only a few weeks earlier.

These two teachers had lost no time finding one of the most well equipped A-V houses in the country. They'll never be satisfied with what their local dealer offers again. It keeps the dealer on his toes and raises the standards of the entire profession. After all, you and the A-V dealer are pretty much in the same kind of work, you know.

And that gets me back to the statement about the fact that you should have a hand in designing the equipment. And you certainly will have plenty of influence—a lot more than you ever realized was possible—when talking things over with the terrific educational people these audio-visual concerns send to "NAVA." Many of them were teachers before they went with the companies. And, in a way, they always will be!

*For you die-hards, as much as may want to stem the tide, audio-visuals are in your future and you may as well resign yourselves to it. Old, time-wasting teaching techniques are going by the wayside. Why not decide right now that a trip to Chicago the last week in July is a must?*

(Reprinted in part from June, 1958—  
County Agent and Vo-Ag Teacher)

# Workshop For Industrial Training Directors

The fourth annual Audio-Visual Workshop sponsored by the Illinois Training Directors Association is again held in conjunction with the NAVA meetings. The basic purpose of the organization is to advance the profession of education in training within industry and commerce, by disseminating information on audio-visual materials and techniques.

On the average, eight meetings a year are held by the Association. All phases of industrial education are presented and discussed at these meetings. Especially in view of the current recession, the typical industrial training director is compelled to get his job done on a minimum budget. The Association consequently plans its audio-visual workshops to emphasize what a training director can do with relatively low-cost materials.

Emphasis is placed on filmstrips, slides and rented motion pictures as well as on do-it-yourself techniques. It is the feeling of the Association's leadership, according to Richard Crook, assistant director at Abbott Laboratories, that many of the A-V specialists in training in industry do not utilize to the fullest extent the use of rental films in their training programs.

The accumulator of a library of films that are usable repeatedly in a continuing training program is generally most effective, as well as most economical. This applies also to the more costly types of special purpose demonstration equipment. But while each training program is a specialized one, tailored to the industry and even to the individual firm it serves, there is a common denominator in the great deal that can be done, and is being done, with relatively modest expense. Teaching techniques, material content and new ideas in industry training are the common concern of all who specialize in this field.

Officers of the Illinois Training Directors Association include

President — Gordon Sargent, Spiegel, Incorporated  
Vice-President — John Baker, Chicago Transit Authority  
Treasurer — Gerald Plank, Caterpillar Tractor Company  
Secretary — Harold Pratt, American Steel Foundries.

The morning session of the workshop will start at 9:00 a.m. Monday, July 28, in the Venetian Room of Chicago's Hotel Morrison. It will be opened by Lee E. Kilbourne, of the Navy Department, and by ITDA president Gordon Sargent. The speakers will be Grosvenor C. Rust, director of the audio-visual center at Wheaton College; Robert Frank of the Kimberly-Clark Corporation; and Fred Amft, of the Kraft Foods Co. Inc. The afternoon session is devoted to personal attendance of the NAVA audio-visual exhibit.

## PROGRAM

- 9:00 a.m. **Opening Session, Venetian Room**  
Welcome by Chairman of Planning Committee  
Lee E. Kilbourne, Navy Department  
Opening Remarks and Introductions by President  
of Illinois Training Directors' Association  
Gordon Sargent  
Spiegel Inc.
- 9:10 a.m. **Keynote Address**  
Grosvenor C. Rust  
Director of Audio-Visual Center  
Wheaton College  
Wheaton, Illinois
- 9:30 a.m. **The Texoprint Process**  
Robert Frank  
Kimberly-Clark Corporation
- 10:15 a.m. **Coffee and Fellowship**
- 10:30 a.m. **"1101 Sutton Road"**  
A new approach to use of Training Films  
Fred Amft  
Kraft Foods Co. Inc.
- 11:30 a.m. **Use of Film Strip**  
Audio Visual Dept.  
Chicago Transit Authority
- 12:10 p.m. **Closing Remarks**
- 12:15 p.m. **Visit Audio-Visual Exhibits**  
to 4:30 p.m.

**First step in any Industrial Training Program  
... get everyone's attention!**

# A-V Conference of Medical and Allied Sciences

The sixth annual meeting of the AV Conference of Medical and Allied Sciences will be held on July 28th at the Morrison Hotel during the NAVA Convention. The membership of this conference is limited to two representatives each from national non-profit associations or groups devoting resources to audio-visual materials and programming in the medical and allied fields.

This conference was first started in 1953 by a small nucleus composed of representatives from the American Dental Association, American Hospital Association, American Medical Association, American Veterinary Medical Association and the Medical Audio-Visual Institute of the Association of American Medical Colleges. These representatives felt that the changing concepts and demand were raising many problems pertaining to the production, distribution and utilization of audio-visual materials.

To meet these problems it was felt that a group should be organized to meet and act together on those matters concerning audio-visual education in the medical and allied sciences which could be better done as a group rather than as individuals. The purpose of this group would be to exchange information regarding programs of the member organizations, and to discover, collect, disseminate and exchange descriptive and evaluative information on audio-visual media as related to their application to education in the medical and allied sciences.

AMA film library—inspection and distribution of A-V materials. Left to right: Daryl Miller, Ralph P. Creer, Edward Bartel.

With these purposes in mind, the conference was formed. The membership now includes twelve national associations and the Canadian Film Institute. Participants from these associations who take part in the annual meeting benefit especially from the morning program which is devoted to the exchange of information on progress during the past year, new films produced, film library and distribution activities, use of audio-visual materials, outstanding films programs and new techniques found to be effective and practical. Time is also devoted to advances in the utilization of the television medium.

On the agenda for this year's annual meeting will be the usual exchange of information in the morning. The afternoon program will include a session on the utilization of audio-visual materials in teaching institutions, a session on the role of the executive producer, and a report on the

current status of international film exchange. All afternoon sessions will include guest speakers who are outstanding men in the field to be discussed.

Optional: Application for membership in this conference can be addressed to Mr. Daryl J. Miller, Assistant Director, Motion Pictures and Medical Television, American Association, 535 North Dearborn Street, Chicago 10, Illinois.

## PROGRAM

### MONDAY, JULY 28, Room 432

- 8:45 - 9:00 a.m. **Registration**  
9:00 - 11:00 a.m. **1957-58 In Review**  
11:00 - 11:05 a.m. **Coffee**  
11:05 - 11:50 a.m. **Organization plans**  
Includes questions and problems not on agenda
- 11:50 - 12:00 p.m. **Trade show highlights**  
12:00 - 2:00 p.m. **Lunch and trade show**  
2:00 - 3:00 p.m. **Telling the AV story**  
Utilization of audio-visual aids  
Dr. Robert C. Snider  
Director, Audio-Visual Aid Center  
University of Chicago
- 3:00 - 4:00 p.m. **The Role of the Executive Producer**  
J. Edwin Foster, Ed.D.  
Director of Audio-Visual Materials  
American Heart Association (New York)
- Peter Hickman  
Medical Film Center  
Smith, Kline and French Laboratories  
Philadelphia
- 4:00 - 4:05 p.m. **Coffee**  
4:05 - 4:30 p.m. **Report on International Film Distribution**  
Ralph P. Creer  
Director, Motion Pictures and Medical  
Television  
American Medical Association  
Chicago
- 4:30 - 5:00 p.m. **Executive Session**  
Election of Officers

## PARTICIPATING ORGANIZATIONS

- American Association of Colleges of Pharmacy
- American College of Surgeons
- American Dental Association
- American Hospital Association
- American Medical Association
- American Nurses Association-National League of Nursing
- American Osteopathic Association
- American Veterinary Medical Association
- Association of American Dental Schools
- Association of American Medical Colleges
- Canadian Film Institute
- National Association of Chiropodists
- Society of American Bacteriologists

... and from here we can communicate with all 4 classrooms.

# Audio-Visual Equipment Comes of Age

By MARY CATHERINE WELCH

Department of Audio-Visual Instruction,  
National Education Association

WHAT'S the newest in the audio-visual movement? A sense of "quiet revolution" . . . a pervading feeling that the audio-visual movement has come of age, is maturing and making a greater contribution to American education than persons outside of education have yet realized . . . a sense of acceptance, spreading from the original small band of devoted a-v disciples out through the whole profession of education.

There are many reasons why this quiet revolution has slowly taken place. One of the major ones is that teachers have found, and many more are discovering today, that a-v materials and equipment provide modern application and extension of some of their best teaching methods; that with these modern teaching-learning tools they can not only do better the good things they were already doing, but can also provide many desirable experiences which were impossible or impractical until audio-visuals became readily available.

As these modern tools become more and more familiar to larger numbers of teachers, utilization improves; the result is more effective teaching, more efficient use of "teacher-power," more and better educational opportunity for your children.

This widespread acceptance of audio-visuals is freeing the researcher from the necessity of proving and re-proving that films of flannelboards can assist the learning process — can even be indispensable for some learning experiences.

The researcher is, then, free to study the elements of production and of utilization which make materials most effective for specific audiences and uses.

Similarly, the teacher, no longer concerned about the possible effectiveness of the media, is now concentrating attention on the selection and creative utilization of materials in terms of specific teaching objectives. In increasing numbers, creative teachers are turning to simple forms of local production to build for themselves exactly the teaching tool they need to fit their own specific needs.

Audio-visual materials are no longer considered supplemental aids; they have become an indispensable provider of learning experiences integrated firmly into the curriculum. Indeed, in many areas, audio-visual programs have been responsible for thoroughgoing curriculum revision, brought about by the growing realization that modern tools make possible a kind of learning-in-depth never before available, and require careful evaluation of what is taught and how it is presented.

An excellent example of this latter process is the change which is taking place in the basic methods of teaching languages. In the traditional foreign-language course, it is almost impossible for most students to develop proficiency in speaking. Such proficiency requires extensive practice under the guidance of a skilled teacher, and there is just not enough time for even a few minutes of this for each individual in a class of 30 or more students.

But in a modern language laboratory, each student works directly with a master instructor through the medium of

magnetic tape and the tape recorder. And the master instructor is free to aid those who have special needs and special queries, through the same interconnected headphone-microphone system used for the tape-recorded materials to which the student listens and through which he records his own responses.

The same methods are being used in exciting ways in speech therapy also. Elements of these new ways are finding applications in speeding reading training and in teaching the skills of listening.

One recent application of the recording laboratory has even allowed an experimental utilization of four different levels of teaching in one elementary classroom, with what are reported as "amazing" results and with an obvious application to the problem of presenting challenging material to both the slower learner and the advanced pupil, as well as serving the needs of the larger majority of "average" learners.

Although not as spectacular, mostly because more widespread, there has been a quiet revolution in the fields of motion and still pictures, too. As has happened in nearly every other area of American life, progress has brought more and more producers into the field, and this has resulted in an awesome variety and number of films and film strips designed for educational purposes.

The quiet revolution has been felt in teacher education, too. There are still too few teachers today who are offered an opportunity for either pre-service or in-service training with audio-visuals, but the number is steadily growing larger as more and more teacher education institutions make course work and laboratory experiences in this area available.

In both these areas, and in the area of provision of audio-visual materials, the colleges and universities are at work. Many major universities offer a rental service for motion picture films which is a basic source for the schools in their areas. And many of these same universities are hard at work in extension courses in the a-v field, taking out to the teacher the background knowledge and the simple skills she needs for effective classroom use of the newer teacher tools.

(Reprinted from April 1958 BETTER SCHOOLS Spotlight Report)

"I agree that strong measures are sometimes necessary to eradicate ignorance of modern teaching methods Miss Nelson, and that no exception should be made in favor of members of the School Board; however . . ."

An outstanding feature of the truly inspiring 1958 national convention of the Department of Audio-Visual Instruction, N.E.A., was an exhibit of visual and audio educational equipment and materials of yesteryear. Arranged by the DAVI Committee on Archives and History, it filled the spacious Indiana Room of Minneapolis' Hotel Leamington, at one end of the extensive commercial exhibits of the AV resources of today and tomorrow.

Many of the items on display were on loan from the DAVI Archives at the State University of Iowa, others were shown through the cooperation of veteran industry leaders and AV administrators in the area. A detailed photographic record was made by the University of Minnesota Photographic Laboratory, which is prepared to supply 8x10 glossy prints and in most instances duplicate 2x2 color slides at cost. (Prints \$1 each, slides 35c, plus postage.)

We have reproduced here a few sample illustrations from this unique series, and listed captions selected at random from the many other pictures available.

For information and description about other pictures listed, write directly to University of Minnesota Photographic Laboratory. Picture captions indicate the picture number to use in ordering prints. Orders should carry negative number W43355, as well.

The Committee on Archives and History already has approximately a thousand items of historical interest in its collection at the State University of Iowa, Iowa City, Iowa. Anyone having photographs, records, programs or other items believed to be of basic interest, is invited to communicate with Lee W. Cochran, at the university, or with Wm. F. Kruse, archivist, 45 Ingleside Shore Road, Ingleside, Illinois.

## OTHER PRINTS and SLIDES AVAILABLE

### 35mm Motion Picture Projectors

Powers, 35mm and slides, Serial 9851, Pats. 1904, 1906. No. D-9  
 Victor 35mm, hand-cranked, No. D-8  
 Zenith, portable, folded into suitcase, Nos. D-10, D-12  
 Acme-SVE, metal case, 35mm and slides, marked "For Use With Slow Burning Film Only." No. D-7

### Ancestral Slide Projectors

Magic Lantern; slides come in many sizes, No. C-1  
 Kerosene lantern slide projector with triple wick, No. C-4  
 Spencer Delineascope, with slides fed from below, No. B-6  
 Lest We Forget—Keystone View Co., stereoscope and stereographs, No. C-2

### 16mm Silent Motion Picture Projectors

Victor Animatograph, first 16mm projector, No. B-1  
 Eastman Kodascope 6-volt, No. B-2  
 Eastman Kodascope model "A" used in the Freeman-Wood research, No. B-7  
 Victor Animatograph 32-volt, No. B-5  
 RCA first **sound-on-film** projector, 1930, had a 50-watt lamp and was meant for "strictly home use." No. A-2

### Early Audio Recording

Edison cylinder phonograph. Nos. A-3, A-4  
 Caltron steel band recorder, No. A-5  
 Webster-Chicago Wire Recorder, No. D-11  
 Brush "Sound Mirror," using the first (paper-backed) "Magnetic Ribbon" shown in U.S. (1916) No. A-6

### Pre-16mm Motion Picture Projectors

Pathoscope Premier, 28mm projector, introduced safety film from France and paved the way for the present safety standard. Nos. C-8, C-9  
 Victor Animatograph 28mm. No. A-7  
 Pathex 9½mm made little impact on American schools but was widely used abroad, especially in France. Nos. A-11, A-12

### Filmstrip Projectors

Bausch and Lomb vertical-feed strip projector, No. C-11  
 Bausch and Lomb horizontal-feed strip projector, No. C-12  
 Victor Combination standard slide and filmstrip, No. C-6  
 Great National Combination slide and strip, No. C-5  
 Filmstrip attachment for underslung Delineascope, No. B-8

### Combination and Special Purpose Projectors

Bausch and Lomb rear-feed opaque and standard slide projector, No. B-9  
 Delineascope combination overhead and standard slide, No. B-10  
 Spencer Delineascope (1923) automatic filmstrip loop, No. B-12

Edison Home Kinetoscope (1912, ran special 22mm film that carried three parallel rows of tiny images, the first run forward, then with lens racked over ran the second in reverse direction, and finally the third, again forward. There was a fourth lens position for showing postage-stamp size slides. A-8, A-10, A-9 shows archivist Wm. F. Kruse lifting arc lamp cover to indicate size of the unit.

Eastman Kodascope Model C 110-volt, B-3

Delineascope, rear-feed, dual chimney, combination opaque and standard slide. B-11

Victor Animatograph sound-on-disc for Western Electric Co. (ERPI) films. A-1

Bell & Howell "Filmo" 32 volt, B-4

# DYNAMIC CREATIVE QUALITY in the 67 Newest Coronet Films

**Incorporating the most modern, effective techniques developed in 19 years of successful educational film-making.**

- ... skillfully correlated to teaching units
- ... devoted exclusively to classroom subjects
- ... prepared with the help of world-famous educators
- ... reflecting the entire curriculum at major grade levels
- ... produced in full, natural color

Since 1939, Coronet Films has been producing outstanding 16mm sound motion pictures regularly. The rich experience of these years has reached its zenith in the films described on these pages—among the finest available today. And these are only a fraction of the more than 800 Coronet films now available in your choice of full color or black-and-white.

The keynote of Coronet's huge production program is "Creative Quality"—that essential added ingredient of fine filmmaking which combines: the courage to pioneer . . . the skill to create improved film techniques . . . the unflinching devotion to high standards of quality in every step of production. This creative quality has won for Coronet Films overwhelming acceptance in all fields of education—and has helped build the largest, most up-to-date group of teaching films in the world.

The films described on these pages are the Coronet releases from September 30, 1957 to October 1, 1958. Each is a distinctive, meticulously planned motion picture. Several have been more than two years in the making. Each serves the unique purpose of presenting, clarifying, and explaining a single subject authentically—and dramatically.

**Beginning Good Posture Habits (1 reel)** The components of good posture, their effect on body growth, and how youngsters can improve their posture habits.

**The Frog Princess (1/2 reel)** A charming tale in animation about a frog princess, a handsome prince, and a wicked magician.

**Living and Non-Living Things (1 reel)** Defines and clarifies the basic differences and similarities between living and non-living things.

**Mother Goose Rhymes: Background for Reading and Expression (1 reel)** An imaginative trip to Mother Goose Land to meet many favorite story book characters.

**Mr. and Mrs. Robin's Family (1 reel)** A beautifully photographed story in a backyard setting of a robin family from spring to early fall.

**What Do We See in the Sky? (1 reel)** The beauty and wonder of the heavens . . . with facts about the sun, moon, planets, stars, and constellations.

**The Wide, Wide Sea: Background for Reading and Expression (1 reel)** A visit to the seashore stimulates thinking about the sea, life in the sea, and the reading of stories and poems about it.

**Woodland Indians of Early America (1 reel)** Authentic reconstructions and scenes lend reality to the daily activities of a Chippewa family prior to European influence.

## FILMS FOR THE INTERMEDIATE GRADES (4-6)

**Boy of a Frontier Fort (1 reel)** Daily life in a frontier fort in the 1790's . . . with dramatic preparations to ward off an expected Indian attack.

**Boy of Renaissance Italy (1 1/4 reels)** A day in the life of an apprentice artist shows us people from all walks of Renaissance society.

**Colonial Family of New France (1 1/4 reels)** A picture of the life of a farmer, a voyageur, a priest, and others in the French Canada of 1700.

**Electricity All About Us (Exploring Science) (1 reel)** Shows basic characteristics of static and current electricity, and its many uses in the home.

**Gold Rush Days (1 1/4 reels)** Important features of the gold rush, including the hardships of travel overland, new settlements, and panning for gold.

**Growing Up (Preadolescence) (1 reel)** Illustrates graphically the normal growth processes, stressing differences among individuals and between boys and girls.

**Healthy Feet (1 reel)** X-ray, animation, and slow-motion photography show the structure and function of each part of the foot and indicate how to care for the feet.

**Healthy Skin (1 reel)** Examines features of the skin and explains the importance of cleanliness in relation to skin's structure and functions.

**The Jamestown Colony (1607 through 1620) (1 1/2 reels)** A vividly dramatic record of events in early Jamestown, against a background of reconstructions at the 1957 Jamestown Festival.

**Let's Be Clean and Neat (1 reel)** Examples demonstrate how being clean and neat contributes to social acceptance, good health, and a feeling of well-being.

breakdown of subjects into topics leads to greater enjoyment of study and to better organization of written material.

**Mealtime Manners and Health** (1 reel) Shows that making mealtime pleasant for others is essential to being well-liked, to easy natural table manners, and achieving good health.

**The Midnight Ride of Paul Revere** (1 reel) A re-enactment of Longfellow's famous poem which will develop a better understanding of literature based on our history.

**The Moon and How It Affects Us** (1 reel) Telescopic motion pictures show the moon's surface and illustrate its phases, eclipses, and effect on the earth's tides.

**\*Our Senses: What They Do For Us** (1 reel) How the five senses work alone and together to serve us and increase our enjoyment of living.

**The Panama Canal** (1 reel) A history of the Canal, showing in a trip through it, how it operates, and its importance in world communication.

**The Story of Our Money System** (1 reel) A history of our money system shows earliest forms of barter and the development of various types of money.

**Story of Our Number System** (1 reel) The historical development of numbers—including ancient counting systems, the abacus and the development of our modern symbols.

**Transportation in the Modern World** (1 reel) The importance of various types of transportation to industry, travel, and the growth of cities.

**Travel in America in the 1840's** (1 1/4 reels) The long trip from New York to Illinois in the 1840's helps us understand significant expansion and growth of transportation.

**Trees: How We Identify Them** (1 reel) Many examples explain how to identify trees and shows the trees of major forest areas.

**Understanding Our Earth: Rocks and Minerals** (1 reel) The three major classes of rocks are identified and related to the natural conditions which produced them.

**The West Indies: Geography of the Americas** (1 reel) Relates the geography of these colorful islands to economic growth and trends in industry.

**Yugoslav Village** (3/4 reel) (B&W only) Life in a small village in Central Bosnia—home life, working in the fields, a school day, and an exciting market day.

## FILMS FOR JUNIOR AND SENIOR HIGH SCHOOL (7-12)

**Careers in Agriculture** (1 1/4 reels) Career opportunities in the areas of crop and livestock farming, agricultural research, industry, conservation, and services.

**Climate and the World We Live In** (1 1/4 reels) The determining factors of climate, the grouping of climate into types, and the affect of various climates on human activities.

**English History: Absolutism and Civil War** (1 reel) Stresses the changing relation of power between king and Parliament from the reign of James I to the Restoration.

**English History: Restoration and Glorious Revolution** (1 reel) In authentic settings, shows how the constitutional monarchy was established after the Restoration.

**English Literature: The Eighteenth Century** (1 1/4 reels) Illustrates trends in literature from neo-classicism to romanticism using excerpts from major writings.

**English Literature: The Elizabethan Period** (1 1/4 reels) By showing social and economic conditions of Elizabethan England, the film explains the creation of this literature.

**English Literature: The Seventeenth Century** (1 1/4 reels) Against the turbulent background of the Commonwealth and Restoration, we view the most important literary figures and their works.

**Grammar: Verbs and Ways We Use Them** (1 reel) Clever animation teaches the essentials of verb forms and what they do in sentences.

**Handel and His Music** (1 1/4 reels) A selection of this great composer's works is performed against a rich background of his life in Germany, Italy, and London.

**High School Prom** (1 1/2 reels) Preparations for a prom and proper etiquette during the evening help young people make the most of this exciting event.

**How Green Plants Make and Use Food** (1 reel) Plants' requirements for life, photosynthesis, and the dependence of all living things on green plants.

**The Human Body: Digestive System** (1 1/4 reels) A detailed look at the functions of the digestive system, showing the related roles of each part of the system.

**Launching the New Government (1789-1800)** (1 1/4 reels) Presents the problems faced by the infant U. S. government and reviews some major events of the period.

**\*Laws of Conservation of Energy and Matter** (3/4 reel) Simple experiments and special photographic effects show that matter and energy cannot be created nor destroyed, but can be converted into one another.

**\*The Laws of Gases** (1 reel) Animation helps to illustrate the meaning and importance of the Laws of Boyle, Charles, Dalton, and Avogadro.

**Leonardo da Vinci and His Art** (1 1/4 reels) A close examination of this artist's famous works increases appreciation of his particular style and the beauty of his art.

**The Metric System** (1 reel) This history of the metric system compares the English and Metric units, showing the advantages of computations in the latter.

**\*Poe, Edgar Allen: Background for His Works** (1 1/4 reels) Major events of Poe's life are outlined with narrated excerpts and re-enactments from many of his works.

**Reproduction in Plants** (1 reel) Explains the processes involved in asexual and sexual plant reproduction and indicates how strains are improved through selective breeding.

**Rice in Today's World** (1 reel) The importance of rice throughout the world, with emphasis on the Orient and factors contributing to its growth and culture.

**Rubber in Today's World** (1 reel) A review of the history of rubber, including primitive methods of manufacture and vulcanization, and a look at the role of synthetics.

**The Sea: Background for Literature** (1 reel) Dramatic excerpts from some of the world's great sea literature are visualized to encourage further reading and develop understanding.

**Simple Plants: Algae and Fungi** (1 1/4 reels) Describes the major characteristics of simple plants, and their value to mankind.

**Simple Plants: Bacteria** (1 1/4 reels) Reveals through photomicrography the characteristics of the three known groups of bacteria.

**\*The Sun and How It Affects Us** (1 reel) Telescopic motion pictures show the physical nature of the sun and how it affects life and weather on the earth.

**United States Expansion: The Northwest Territory** (1 1/4 reels) Recreates major events leading to the opening of the Northwest Territory to large scale settlement.

**\*United States Expansion: Overseas (1893-1917)** (1 1/4 reels) The changing policy and new problems of overseas expansion into Hawaii, Cuba, the Philippines, and Central America.

**The Vikings and Their Explorations** (1 reel) Through costumed dramatizations and authentic Viking artifacts, the film recreates Norse culture and history.

**The War of 1812** (1 1/4 reels) The causes, broad strategy, and ultimate results of the War of 1812, showing the major areas of battle.

**Wolfe and Montcalm** (2 1/2 reels) (B&W only). Preparations for the Battle of the Plains of Abraham, the strategy of attack, and the death of the two great generals.

**Yugoslavia** (1 reel) (B&W only). A survey of the geography of Yugoslavia, including city life in Sarajevo and Belgrade, farming conditions, and economic developments.

## FILMS FOR COLLEGE AND ADULT GROUPS

**Education in America: The Seventeenth and Eighteenth Centuries** (1 1/2 reels)

**Education in America: The Nineteenth Century** (1 1/2 reels)

**Education in America: Twentieth Century Developments** (1 1/2 reels)

A unique series of motion pictures surveys the momentous events in three hundred years of American education. These films provide excellent information on the beginnings of our educational system and its adjustments to social change through the years.

**Profiles of Elementary Physical Education** (3 reels) Stresses successful methods used in teaching elementary physical education, with many ideas for the guidance of class activities.

**\*Films to be released between July 15 and September 30, 1958.**

All films are available in either color or black-and-white, except for three as indicated.

# CORONET FILMS

Chicago 1, Illinois

The World's Largest Producer  
of Educational Films

## HOW TO OBTAIN CORONET FILMS

**PREVIEW:** Prints of all Coronet films are available for preview by those who desire to make selections for purchase. There is no obligation except for return postage. Simply let us know which films you would like to evaluate.

**PURCHASE:** Prints of all Coronet films on these pages are available at \$100 a reel in color or at \$55 a reel in black-and-white, with proportionate prices applying for less or more than one reel.

**RENTAL-PURCHASE:** Prints of these films may be purchased outright at the prices quoted above, or obtained under the generous provisions of the Coronet Rental-Purchase Plan. See page 6 of the 1958-59 catalogue for details.

Preview requests or purchase orders should be sent to Coronet Films, Sales Department, Coronet Building, Chicago 1, Illinois or to your authorized dealer.

**Advance Furnace Co.**, 2310 E. Douglas, Wichita, Kans. **Booth N-94.** **Pixmobile** projection table offers triple-deck table, sponge-rubber top, 4" wheels equipped with brakes that hold on incline, 42" table \$32.95. **Optivox** portable easel, adaptable for chalk, charts or magnets; new price \$44.95.

**Allied Radio Corp.**, 100 N. Western Ave., Chicago 80, Ill. **Knight** KN-3060 public address amplifier; 60-watt; input facilities for 2 microphones, 2 phonographs and a magnetic phonograph; output jack permits feeding a tape recorder while program is in progress; 20 to 20,000 cps; U.L. approved. \$84.00; with 4-speed record player \$104.50.

**American Electronics, Inc.**, 655 W. Washington Blvd., Los Angeles 15, Calif. **Booth C-15.** Professional tape deck for either monaural or stereophonic sound. Dual torque motors eliminate belts, gears, clutches, pulleys; hysteresis synchronous capstan drive motor maintains accuracy tolerance of two seconds per half-hour. \$349.50, including pre-amplifier.

**AMERICAN ELECTRONICS "CONCERTONE" MODEL 68 TAPE RECORDER**

**American Optical Company**, Instrument Div., Box A, Buffalo 15, N. Y., **Booth S-131.** **High Speed Opaque Delineascope** has large 10" x 10" aperture, easily accommodates teaching units — thick texts, photographs, maps, charts, stamps, even rock specimens. Superior screen image assured by 18" focal length, 5" coated projection objective and 1000W bulb. Precise focusing. Cool operation. Sturdy lightweight aluminum construction. **GK Series Delineascopes** for 3 1/4" x 4", 2 3/4" x 2 3/4" and 2" x 2" color or B&W slides. Performs equally well in small classroom or large auditorium. Available in standard or high-speed models. Write for FREE color brochure, SB3500.

**Ampex Audio, Inc.**, 1020 Kifer Road, Sunnyvale, Calif. **Booth N-75.** **New Ampex Universal Model "A"** (900 series, 4-track stereo tape recorder, offers choice of 2-track or 4-track or monaural) at flick of a lever. Four times as much music from any given amount of tape — twice as many tracks at half the speed. Earlier recorders in this series readily convertible by distributor service stations. Available on all Ampex consoles, modular units, portables and unmounted tape decks.

**Amplifier Corp. of America**, 398 Broadway, New York 13, N. Y. **Magneloop** tape recorder takes and plays back continuous loop of 1/4" tape, up to 60 minutes playing time. Easily removable snap-in cartridges permit ready storing of recorded matter. Many optional variables for special purpose installations. \$395 to \$1,730.00.

**Anchor Dough**, Patrick Hamman, P.O.B. 2056, Riverside, Calif. A rubber-like gum that sticks paper and other material to any clean, dry surface. Re-usable. \$1 sheet 5"x4"x3/16" sufficient for whole school year.

**Antrex Corporation**, 856 N. Rockwell St., Chicago, Ill. **Redcap** attache case public address system, 18 lb., powered solely by two flashlight batteries, serves an area of more than

6,000 sq. ft. Includes hi-fi transistorized amplifier, heavy duty 8" speaker, microphone, control and batteries (readily replaceable and lasting up to 50 hours). In 18" x 14" carrying case, \$199.50.

**Animation Equipment Corp.**, 38 Hudson St., New Rochelle, N. Y. **Booth S-136.** A new aerial-image rear-projection unit adds further to the versatility of this advanced professional type animation stand, converting it in fact into a vertical optical effects printer. An animated figure can be photographed in perfect registry over live action. The new device may be attached to existing Oxberry stands.

**OXBERRY PROFESSIONAL ANIMATION STAND**

**Audio Devices, Incorporated**, 444 Madison Ave., New York 22, N. Y. Magnetic recording tape for every purpose, including plastic-based Audiotape in 1 1/2 and 1-mil thickness; Mylar-based Audiotape in 1 1/2, 1, and 1/2-mil thicknesses; and Master low-print-through Audiotape, which reduces print-through from layer to layer of stored tape, permitting indefinite storage. Also — Audio Head Demagnetizer, which cuts hiss level by removing recording head magnetism.

**Audio-Master Corp.**, 17 E. 45th St., New York 17, N. Y. **Booth N-78.** Stereophonic and transistorized 4-speed record players. A tape recorder with 72 different tracks, also a portable transistorized tape recorder. Elaborate earphone aggregate box to accommodate up to 20 headphones. Mood and Bridge Music Library for producers of 16mm films, sound slidefilm, etc.

**Audiotronics Corporation**, 11057 Weddington St., No. Hollywood, Calif. **Booth C-20.** Dual speaker 4-watt classroom radio. Four-speed record players; ATC-300 6-watt; ATC-400, same with PA system included; ATC-500V 20-watt transcription player and PA system. Models 300V, 400V and 500V have variable speed motors. All are transformer powered for safety.

**FOUR-SPEED RECORD PLAYER FOR CLASSROOM USE**

# Product Review

**Audio-Visual Research**, 523 Plymouth Court, Chicago 5, Ill. An electric pacer for the improvement of reading rate and comprehension, the **Reading Rateometer** has built-in rate calculator, and is portable for issue or loan to individual students for daily home use. \$35.00.

**Bausch & Lomb Optical Co.**, 635 St. Paul St., Rochester 2, N. Y. School Vision Tester provides speedy, reliable, practical test of vision performance of each child; a complete battery of tests can be administered in 2 minutes, including acuity, hyperopia, muscle balance and checkerboard acuity; test distances of 20 ft. and 13 in. produced optically permit the instrument to be used anywhere, in less than 3 square feet of space. Weight 19 lbs., size 20" x 10" x 18". \$225.00.

**Bell & Howell Co.**, 7117 McCormick Road, Chicago 45, Ill. **Booth L-59**. New Model 771 **Stereotone** tape recorder, with stereophonic companion system including pre-amplifier, amplifier and power speaker, \$300. Model 600 Portable Stereo Recorder, single case, \$329.50-344.50, depending on finish.

**Bell Sound Systems, Inc.**, 555 Marion Rd., Columbus, Ohio. Complete line of tape recorders, tape transports, public address systems, stereo systems, hi-fi amplifiers, FM-AM tuners.

**Beltone Hearing Aid Co.**, 2900 W. 36th St., Chicago, Ill. Auditory training unit provides binaural hearing at ear level to hard-of-hearing students; frees teacher and pupil from forced use of microphone and desk plugs. Each unit, self-contained and self-powered, weighs 6¼ ounces.

**Berndt-Bach, Inc.**, 961 N. Mansfield Ave., Hollywood 38, Calif. A new "Filmagnetic" unit, factory-installed on any Auricon camera permits simultaneous optical and magnetic single system recording on pre-stripped stock, monochrome or color. The Filmagnetic unit may be temporarily removed without the use of tools, providing choice of either type of track. Magnetically recorded film passes through normal picture development and is played back on any 16mm sound motion picture projector. Filmagnetic recording unit, amplifier, microphone, cables and batteries, complete in cowhide leather case, \$870.00.

**Beseler Co., Charles**, 219 S. 18th St., East Orange, N. J. **Booth K-55**. New Vu-Graph **Royal** offers almost twice as much light as previous overhead models, complete interchangeability of lenses from 8.8" to 40" focus, and a micro switch to make for more professional presentations. Another new Beseler item is the **Clear-A-Slide Kit** for the production of 3¼x4, 5x5, 7x7 or 10x10" color transparencies using no equipment whatsoever other than contents of the kit.

**Blonder-Tongue Laboratories, Inc.**, 9 Alling St., Newark 2, N. J. **The Observer**, closed circuit TV camera, 1" f 1.9 lens, accommodates all C-mount lenses, focus 2" to infinity, 525-line scanning, compact, weighs 5 lbs. **Control Generator**, may be located up to 500 feet from camera; **Video Monitor**, 10mc video bandwidth, self-focusing 70-degree picture tube, 55 lb., choice of metal carrying cabinet or rack mounting; **Automatic Light Compensator**, 150 to 1 range, and other accessory units.

**Bogen Company, David**, Div. of The Siegler Corporation, Paramus, N. J. Lower prices, 4-speed, hi-fi manual record player, Model B-21 permits variation of speed up to 5 per cent. Universal plug-in head accommodates all popular cartridges. \$25.95.

**Broadcast Equipment Specialties Corp.**, POB 149 Beacon, N. Y. Three new models of **Tapak** spring-driven, walkie-type tape recorders incorporate new **Cyro Drive**, a tape-driven fly-wheel and ball-bearing idler that filters out mechanical wow and flutter. 7½ ips, built-in 4x6" speakers. Ranger-sync model permits synchronous spot sound recording anywhere. Rangertach generators provide synchronous recording on spring wound cameras. Rangersync equipment may be installed on earlier models. Simplex Newscaster Model \$289.50; Triplex Musicale Model \$438.75.

**Broadcasting & Film Commission**, National Council of Churches, 220 Fifth Ave., New York 1, N. Y. **Booth T-154**. Latest releases are two films directly related to this year's mission themes. **North American Neighbors**, cooperatively sponsored by nine denominations, deals with Christian re-

sponsibilities from Alaska to the Caribbean. **Mid-East Profile**, sponsored by eleven cooperating denominations, deals with the forces and problems of mission work in that area.

**Bruning Company, Charles, Inc.**, 1800 Central Road, Mt. Prospect, Ill. **Booth D-25**. Multicolor Diazotype Kit makes brilliant transparencies (and glossy prints) from ordinary monochrome translucent originals. Double-coated films permit making composite prints with a different original reproduced on each side. Numerous colors reproduce on single sheet. Kit contains film and paper, developers in handy dispenser cans, and developer applicators. No darkroom is required.

**Burke & James, Inc.**, 321 S. Wabash Ave., Chicago 4, Ill. Transistorized, battery-operated **Phono-Trix** tape recorder operates on "D" size flashlight batteries, available everywhere. Variable speeds 1⅞ to 7½ ips, 3" reels record up to 70 minutes, one set of batteries lasts up to 50 hours. With microphone and playback speaker, less batteries, \$99.50.

**TAPE RECORDER RUNS ON FLASHLIGHT BATTERIES**

**Busch Film & Equipment Co.**, Saginaw, Mich. **Booth S-135**. Busch **Cineducator** houses running 16mm sound projector in completely enclosed, wheeled cabinet, with built-in rear projection screen, for showing in lighted rooms.

**Califone Corporation**, 1041 N. Sycamore Ave., Hollywood 38, Calif. New 1959 models of professional portable phonographs, transcription players and complete sound systems. New features include unique arm rest which automatically secures the pickup arm when player is carried, provision for stereo conversion, spring-mounted feet to prevent arm from jumping under extreme floor vibration, and a new more powerful hi-fi amplifier.

**Camera Equipment Co., Inc.**, 315 W. 43rd St., New York 36, N. Y. **CECO** vidicon camera mounting equipment includes a spring-balanced vidicon TV head adaptable for cameras weighing up to 85 lbs. A remote control pan and tilt assembly is also available, as is a synchronous single-speed stop-motion motor for the Maurer camera. The latter drive unit measures 5⅝ x 5 x 4¼", with 4-digit reset veeder root frame counter, on-off and forward-reverse switches, continuous or stop-motion selector; a 2 ft. pigtail cable from the drive unit couples with amphenol octal connector to 4 x 5 x 6" electronic control box.

(See Photo on page 346)

**Camera Mart, Inc.**, 1845 Broadway, New York 23, N. Y. Dual Sound Reader combines an optical (or magnetic) sound reproduction head and post assembly, a base plate to which any 16mm motion picture viewer may be attached, and a combination amplifier-speaker which may readily be moved out of the editing area. Works in either direction; for single or double-system sound. \$195.00.

**Chart-Pak, Inc.**, 1 River Road, Leeds, Mass. **Booth T-153**. Transparent color tapes (red, blue, green, yellow) in width from 1/32" to 1" facilitate the making of charts, slides and overlays for overhead and other still projection. Available also are **Contak** shading films and color tints with pressure-sensitive backing.

**CECO VIDICON

EQUIPMENT  
AND MAURER  
CAMERA**

films by future teachers. More than 100 new subjects are in various stages of production and will be released approximately six a month.

**THE CATECHISM WAS THE FIRST "CORE CURRICULUM" IN EARLY PURITAN SCHOOLS. SCENE FROM EDUCATION IN AMERICA: SEVENTEENTH AND EIGHTEENTH CENTURIES**

**CO-DE-CO**, 446 W. 43rd St., New York 36, N. Y. **Booth R-123.** "Reflection optics" distinguish this **Proffector I** slide and filmstrip projector from others in this field. Large screen image at short throw, a 40" picture at 8'.0. Sharp focus, from one-to-one to any desired magnification, no minimum throw. Especially suitable in high ambient light level. Compact, cool, noiseless, light weight.

**Coffey Co., Jack C.**, 710 Seventeenth St., North Chicago, Ill. **Booth H-43.** All-purpose rolling projector stand with built-in shelves for filmstrip storage accommodates expanding filmstrip library, from 90 to 540 titles. 15½x24", 40" high. Also new disc record filing cabinet, capacity 60 individual compartments or 200 group-filed records, 20½"x14¼"x17½" high, door opening 17"x14¼"; lock-stack design allows for growth of library. Plans and materials for organizing a disc record library are included.

**Geo. W. Colburn Laboratory, Inc.**, 164 N. Wacker Drive, Chicago 6, Ill. Complete service to educational film and TV producers continues at above laboratory — 16mm motion pictures, 35mm slidefilms and filmstrips. Production services now carried on by John Colburn Associates, Inc., 1122 Central Ave., Wilmette, Ill.

**Commercial Picture Equipment, Inc.**, 1800 W. Columbia Ave., Chicago 26, Ill. **Booth S-127.** New Model 201 **Roll-A-Lock** projection table features straight line styling. Scratchproof moulding, applied without nails or screws, has raised lip to prevent lamps, etc., from rolling off. New also is adjustable center shelf, three height positions permit tailoring the table to meet any need.

**Compco Corp.**, 1800 N. Spaulding Ave., Chicago 47, Ill. A new precision die-cast aluminum hub improves the professional (800' and up) Compco reel; film slots are uniformly positioned, the reels will not pull apart. Each reel includes a new type film retainer clip that prevents film from unwinding, extra clips are available at nominal cost. Matching cans are die-formed with standard stacking rings and close fitting covers that will not bind. Finish is baked on hammertone gray enamel, each can includes free identifying label.

**Concordia Films**, 3558 S. Jefferson Ave., St. Louis 18, Mo. **Booth T-148.** **Old Testament Scriptures**, 14 new films on great heroes of the Old Testament, 17 min., color and black-and-white. New Christmas filmstrips. New Bible-teaching filmstrips, silent and sound. New catalogs.

**Coronet Instructional Films.** Coronet Bldg., Chicago 1, Ill. **Booth G-39.** Turn to center-spread in this magazine for listing of 67 new films, all but three in both color and black-and-white, produced during last 7 months. Current catalog lists 802 films, the world's largest group of educational films produced within one organization. Three new titles on **Education in America** are included in 50-subject series available to teacher-training institutions for unlimited use at nominal cost to foster greater and better use of

**Cousino Visual Education Service**, 2107 Ashland, Toledo 2, Ohio. **Booth G-42.** "Audio-Vendor," originally developed as point-of-sale audio plugger, has increased capacity and big potential for self-contained pre-recorded educational material. "Visual-Van" projector tables.

**Dage TV Division, Thompson Products, Inc.**, West 10th St., Michigan City, Ind. Fully automatic self-contained TV cameras require operator only to throw switch, focus and aim. With industrial sync and standard tubes, under \$1600. With full RETMA sync, all-transistor and printed circuits weight only 4 lbs., 8-watt AC or DC required. \$8000.

**Da-Lite Screen Co., Inc.**, Warsaw, Ind. **Booth P-106.** **Wonder-Lite** screen material is designed to serve wider seating area than any previously offered, without distortion or eye fatigue, effective even in undarkened room. Non-tearing, solid vinyl film, no laminations to separate or discolor, tough, non-scratching, washable, fire- and fungus-resistant. Available in conventional roll-up style or convenient "push-button" tripod mounting. New tensioning device stretches fabric to a flat wrinkle-free surface. \$39.50 (40x40); \$49.50 (50x50).

**Davis & Sanford Co., Inc.**, 25 Avenue "E," New Rochelle, N. Y. **Booth R-121.** Tri-Vision special effects attachment for movie cameras permits instantaneous superimposition of titles and double- and triple exposure trick effects. Floating action professional tripod, dolly and accessories.

**Distributor's Group, Inc.**, 204 — 14th St., NW., Atlanta 13, Ga. **Booth A-1.** **FilmMagic Pylon Kit**, applicable to 16mm sound projectors, treats films with silicone finish to eliminate jump due especially to "green" prints.

**Draper Shade Company, Luther O.**, Spiceland, Ind. New, novel Draper V-Screen, matte-white surface, extreme wide viewing angle, washable, light weight. Anodized aluminum supporting bar. Screen fits over map hooks at the chalkboard, or attaches by means of special clips furnished with each unit.

# Product Review

**DuKane Corporation**, St. Charles, Ill. **Booth O-99**. Full line of sound slidefilm equipment, ranging from the high-powered auditorium combination to the small lightweight "Flip-Top" for personal showings. Several intermediate sizes and models, including a sound unit for use with existing projectors.

**Allen B. Du Mont Laboratories, Inc.**, 750 Bloomfield Ave., Clifton, N.J. Two-camera educational closed circuit TV package includes portable control station with video monitor for each camera and line motor and a standard television receiver showing exact picture being delivered by RF to classrooms using similar standard receivers. Single student may operate entire system from his post at control panel. Equipment, on dollies and tripods, may be moved right into classrooms. Approx. \$7,000.

**E. I. du Pont de Nemours & Co.**, Wilmington, Del. A new type of thin-gauge Mylar polyester film, with almost double the tensile strength of standard Mylar, will assure improved performance for the so-called "double-play" tapes. This new "50 Mylar T" can be stored indefinitely without embrittlement and is not affected by moisture and temperature extremes (from minus 80 to plus 300 degrees).

**Eastman Kodak Co.**, Rochester, N. Y. **Booth R-117**. The newest **Pageant** 16mm sound projector (Model AV-154-8) features 1200-watt lamp capacity and a tungsten carbide pull-down tooth reportedly showing only negligible wear after 2000 hours of continuous use, equal to four or five years of school or professional operation. Three-wire cord with 2-prong adapter plug is supplied to conform to codes requiring additional grounding of electrical equipment. \$499 with self-contained speaker; \$599 with Kodak DeLuxe Speaker in separate case.

**THE KODAK  
PAGEANT SOUND  
PROJECTOR,  
1958 MODEL  
AV-154-S,  
TYPE II**

**Ednalite Optical Company, Inc.**, 200 N. Water St., Peekskill, N. Y. Improved optics in Ednalite Projection Pointer. Also new f:1.9 zoom lens for 8mm cameras provides range from 9.5mm wide-angle to 28.5mm telephoto with matched, coupled viewfinder and automatic parallax correction. \$249.50.

**Educational Developmental Laboratories**, 75 Prospect St., Huntington, N. Y. Eye-movement photography will be simplified with the release, soon, of the **Reading Eye Camera**. It is visualized as an invaluable tool in the testing programs of the reading specialist, school psychologist, vision specialist and others involved in the evaluation and improvement of reading instruction.

## NEW EDL EYE-MOVEMENT CAMERA

**Educational Electronics, Inc.**, 6322 N. Clark St., Chicago, Ill. Kits for assembly of electronic circuits by students. Color-coded, pre-soldered, graded in difficulty from junior high to college.

**Educational Screen & Audio-Visual Guide**, 2000 Lincoln Park West, Chicago 14, Ill. **Booth N-89**. This oldest magazine in the audio-visual field (est. 1922) now appears 12 times a year. The annual **Blue Book of Audio-Visual Materials** now appears in August, just prior to the opening of the school year, instead of in December, as heretofore, prior to the start of the calendar year. Other special issues include: Religious - February; Audio - April; Convention - New Product Review; Annual Overview and Forecast - December.

**Electro-Chemical Products Corp.**, 60 E. Franklin St., East Orange, N.J. Film treatment and cleaning fluid that cleans, lubricates, conditions, and eliminates static charge all in one operation.

**Electronic Instrument Co., Inc.**, 33-00 Northern Blvd., Long Island City, N. Y. **EICO** hi-fi components and electronic test equipment. New 30-watt high fidelity basic power amplifier, kit \$39.95; wired \$62.95.

**Electro-Voice, Inc.**, Buchanan, Mich. **Stereon III** second-channel loudspeaker, designed to match even the largest bass reproducer, saves space in stereophonic sound reproduction by passing only frequencies above 300 cps; those below do not indicate sound source and hence contribute no stereo effect. 25"x7 1/2"x17 1/2", weight 37 lb., \$129.50. **XX3 Stereon Control Filter**, matching transformer and crossover network components combine 2 channels, \$30. Two additional Stereons may be spaced around large rooms to achieve the scope and magnitude of the latest movie processes.

**Encyclopaedia Britannica Films, Inc.**, 1150 Wilmette Ave., Wilmette, Ill. **Booth I-49**. New complete courses in Introductory Physics and Introductory Chemistry. 16mm educational films, 35mm filmstrips. Also the best of Hollywood feature films and short subjects from MGM, 20th Century-Fox, Warner Bros. and other major studios.

**Enteco Industries, Inc.**, 610 Kosciusko St., Brooklyn 21, N. Y. **Polariflash** interposes a shatter-resistant laminated polarized glass shield between flashbulb or strobe and the subject to eliminate reflections, glare. \$10.95.

**Eye Gate House, Inc.**, 146-01 Archer Ave., Jamaica 35, N. Y. **Booth F-35**. Latest release in Eye Gate's program of more and more filmstrips in the field of elementary science and mathematics is **The Fundamentals of Science**, for kindergarten and Grades I and II. During the next 12 months there will be at least 18 more for primary and intermediate grades respectively. All are in color and are photographed "live" whenever possible.

**Family Films, Inc.**, 5823 Santa Monica Blvd., Hollywood 28, Cal. **Booth P-104**. The latest addition to the extensive library of Family Films productions is an initial offering of 44 filmstrips, in color, with LP narration that includes discussion bands to present added, related motivation for listener involvement and participation. There are ten "kits," each containing four filmstrips and two discs; and four individual sound slidefilms with Christmas emphasis. Sixteen of the strips are for kindergarten, eight for the 8-12 brackets, and the rest for older youth and general family use. Additional releases in the **Our Children** and **Living**

# Product Review

Parables series of motion pictures will also be featured at this, the Tenth Anniversary, of the founding of Family Films.

**Ferrodynamics Corp.**, Lodi, N.J. Recording tape — "Brand Five" and "Sonoramic." Accessories.

**Fiberbilt Sample Case Co.**, 40 W. 17th St., New York 11, N.Y. Improved parcel post shipping cards, Post Office approved, are held securely in steel cardholder.

**Filmkare Products Company**, 446 W. 43rd St., New York 36, N. Y. Plastic filmstrip containers—red, blue, yellow, green, special colors to order. Lids fit well, container fits standard storage equipment, non-scratching, does not crack. 3 doz. \$2.00; 1M \$24.00.

**Fisher Manufacturing Co.**, 1185 Mt. Read Blvd., Rochester 6, N. Y. **Booth N-83.** Film cement now dispensed via new tube method. Lens cleaner in pencil form, the **Rougene Lens Pencil**, is being put on the market for the first time at this 1958 NAVA Exhibit.

**Florman & Babb, Inc.**, 68 W. 45th St., New York 36, N. Y. **Booth N-88.** New **F&B Butt Splicing Block** joins 16mm or 35mm film by means of "Magic Mylar" sprocketed transparent splicing tape. The film to be spliced is registered on sprocket pins, cut, and then mounted over the tape held in the block to receive it. This new method of splicing is used widely by schools and film libraries. Combination block for 1/4", 16mm and 35mm, \$24.50. For 16mm only, \$9.50. 35mm only, \$12.50. 1/4" only, \$6.50.

**F&B  
COMBINATION  
BUTT-SPLICE  
BLOCK**

**Forse Manufacturing Co.**, 2347 Sullivan Ave., St. Louis 7, Mo. A line of school shades and draperies to meet every requirement for light control and room darkening, available in attractive fabrics and colors to harmonize with other appointments. Forse Wearproof fabrics, translucent and opaque, provide effective and attractive installations over glass block, wide windows and window groups. Apply for samples of materials.

**Garrard Sales Corp.**, 80 Shore Road, Port Washington, N. Y. Model RC 121/11 is a dual purpose, 4-speed, automatic and intermix changer as well as a manual player.

**Gates Radio Company**, 123 Hampshire, Quincy, Ill. New **Studioette** speech input console provides educational broadcasters and AV centers with modestly priced but very versatile unit for main and sub-studio service. Four mixing channels each key selected to either the program or monitor bus. Three keys accommodate three turntable units; four microphones may be key selected into two preamplifiers—operate in conjunction with mixing channels one and two.

**"STUDIOETTE"  
CONSOLE, VERSATILE  
SWITCHING UNIT**

**Genarco, Inc.**, 97-04 Sutphin Blvd., Jamaica 35, N. Y. **Booth U-159.** New electric slide changer accommodates up to 70 slides, 3 1/4 x 4" glass or Polaroid plastic-mounted; remote-control push-button operated, slides change in less than 1/2 second. \$285. Kits available for adaptation to existing projectors. The newly improved 3,000-watt Genarco slide projector serves the largest auditoriums and ball-rooms.

**General Electric Co., Photo Lamp Dept.**, Nela Park, Cleveland 12, Ohio, **Booth T-142.** DHT, a 1200W projection lamp for 16mm sound projectors. Features collector grid which attracts the burnt filament particles and reduces bulb blackening. Result: 15-20% more light on screen than with regular 1000W lamps. May be used in some projectors designed for 1000W lamps.

**General Precision Laboratory, Inc.**, 63 Bedford Road, Pleasantville, N. Y. New viewfinder TV camera chain for studio or classroom use, GPL Model PD-250, consists of a vidicon camera with 5" electronic viewfinder; four-lens turret and either portable or rack-mounted camera control unit; front and back tally lights and intercom. Designed for one-man operation; viewfinder has aperture correction; turret, with any 16mm C-mount lenses including zoom type, is manually operated from the back of the camera. Full 600-line resolution. Weight 28 lb.

**ONE-MAN TV CAMERA WITH 5"  
VIEWFINDER, PRODUCED BY  
GENERAL PRECISION**

**Graflex, Inc.**, 3750 Monroe Ave., Rochester 3, N. Y. **Booth R-115.** Two School Master filmstrip projectors are the first new offerings since taking over the SVE equipment line. Using the new Sylvania Tru-Focus lamp, a light output boost is claimed of from 15% to 30% over previous models. Accommodates both filmstrips and 2x2 slides; dual controls permit operation from either side; retracting **Handi-Handle** eases transport from room to room. 500-watt \$84.50; 750-watt \$99.50. Also complete line of **Ampro** 16mm Sound Projectors, featuring triple-claw movement. "Flame Plating," attached reel arms and new powerful amplifier.

**The Grayline Company**, 12243 Avenue "O," Chicago 33, Ill. **Booth H-46.** **Phonogard** record players include a patented transparent guard that encloses the tone arm at all times. Operated by a remote control lever-knob, the pickup may be placed anywhere on the record without danger of dropping the stylus on the disc.

**Gray Manufacturing Co.**, 16 Arbor Street, Hartford, Conn. New Model 33H turntable features hysteresis-synchronous motor, special shock mounts, and resilient drive via shock-absorbing flexible belt to outer diameter of the turntable. New Gray tone arm is statically balanced around a vertical pivot for maximum tracking stability. Sealed viscous damping on both vertical and horizontal pivots.

**Gruber Products Co.**, 2223 Albion, Toledo 6, Ohio. **Booth H-41.** Two new non-folding Wheelit projection tables have been added to the Gruber line, now under national distribution by J. C. Coffey Co.

**Haloid Xerox, Inc.**, 2-20 Haloid St., Rochester 11, N. Y. **Booth S-129.** Xerography offers a clean, fast, dry electrostatic copying process that requires neither dark room, liquid chemicals nor water. Major savings in time and cost, in producing transparencies for overhead and slide projectors, accomplishing in 3 minutes what conventional methods do in an hour or more. No intermediate negative needed.

# Product Review

**SLIDE MADE FROM LARGE COPY (background) ON XEROX NO. 4 CAMERA**

**The Harwald Company**, 1245 Chicago Ave., Evanston, Ill. **Booth M-67.** A brand new item, the electronic film cleaning machine, may be mounted either on the Harwald **Inspect-O-Film** or between power rewinds. Will operate at speeds as high at 1000' per minute with only short drying distance. The Rigby **Splice-O-Film** automatic hot splicer and other professional editing equipment are recent imports from Britain. **Movie-Mite Supreme**, 16mm sound motion picture projector, \$298.50.

**Herrick Micro-Projector**, 2457 Holmes St., Kansas City 8, Mo. Stainless steel stand polished to chrome-like luster; turret is single casting mounting 7x, 14x and 25 power objectives. Accessories include supplementary lens, heat filter, polarizing filter. Height 27½", weight about 10 lb. \$162.50.

**Holes Webway Co.**, St. Cloud, Minn. Die-cut letters, numerals, mounting cards and strips for making of signs, packaged in ready-access storage cabinet. Kit \$29.75.

**Hunter Douglas Aluminum Corporation**, 405 Lexington Ave., New York 17, N. Y. **Flexalum** Audio-Visual blinds adapt any classroom to modern AV training. This versatile solution provides precise control of light from bright sunlight to darkness, eliminates glare, darkens room for opaque projection while assuring healthful ventilation without drafts.

**Impco, Inc.**, 1050 Boulevard, New Milford, N. J. A single unit that reportedly accommodates practically all AV demonstration techniques is the **DeLuxe Presenter**, combining magnet board, felt board, peg board, turn back chart, puppet stage and screen. New design wall mount makes for easy installation.

**International Film Bureau**, 57 E. Jackson Blvd., Chicago 4, Ill. **Booth E-27.** The new model of the Foster Rewind Table has a work drawer that holds such items as film cement, gloves, scissors, etc. It is the only fully skirted editing and inspecting table; its corners have been rounded for safety and appearance.

**NEW "FOSTER" REWIND AND EDITING TABLE**

**The Jam Handy Organization**, 2821 E. Grand Blvd., Detroit 11, Mich. **Booth J-54.** Many new filmstrip releases, history, mythology, engineering, primary grade material.

**The Judy Company**, 310 N. 2nd St., Minneapolis 1, Minn. **Alphasets**—die-cut, white velour-backed letters and numbers, packed in heavy corrugated boxes with separators for each character. **Stick-o-Mat** flannel boards have reinforced edges, separate wire folding easels with rubber feet. Colors: Moss Green, Dark Blue, Maroon, Black.

**Keystone View Company**, Meadville, Pa. Tachistoslides (4"x 7"), as well as 3¼"x4" and smaller are accommodated on the Keystone Overhead. Concentration of light on relatively limited area increases brilliance to make this truly a "daylight" projector. Weight under 20 lbs.

**LaBelle Sales Corporation**, 510 S. Worthington St., Oconomowoc, Wis. **Maestro II** is a single-case recorder, projector and playback. Up to 125 slides in one magazine, activated either manually or by inaudible electronic impulse on accompanying 7" tape commentary and sound effects reel. Presentations can be prepared by anyone at cost only of slides and tape, or may be produced professionally. Master recording unit \$525.00. Play-back units, less recorder, available also.

**MAESTRO II COMBINATION TAPE RECORDER AND PROJECTOR**

**Levolor-Lorentzen, Inc.**, 720 Monroe St., Hoboken, N.J. Scientifically developed audio-visual blind assures adjustment of classroom light level to meet every teaching need. From complete darkness to softly diffused light just right for note taking and visualization techniques, each room, each window is controllable in a matter of seconds.

**Lightmaster Screen Co.**, 12270 Montague St., Bldg. 57, Pa-coima, Cal. **Booth C-18.** LSC screens offer 160-degree viewing angle, for front projection in normal room light, full window ventilation.

**LogEtronics Inc.**, 500 E. Monroe Ave., Alexandria, Va. Electronic enlarger, Model D-5, incorporates automatic electronic dodging and exposure control for the purpose of bringing out latent detail indistinguishable on conventional X-ray and other negatives. A cathode-ray light tube scans the negative approximately once a second, a feed-back circuit continually varies the intensity of the scanning beam to compensate for the varying densities of the negative, operator selects the desired degree of dodging. Print size up to 16x20" from 35mm to 4x5" negatives, accessory head for up to 8x10"; net weight 225 lb., 79" high, 24" wide, 38" deep. Principal installations include medical colleges, hospital, industrial and university photography departments.

**L.O.F. Glass Fibers Co.**, 1810 Madison Ave., Toledo 1, Ohio. Three new basic glass yarns, developed by the Cordo Chemical Corporation, Norwalk, Conn., include a new screen material, an opaque drapery stock, and a room divider material. The screen fabric, **Cordoglas**, reportedly is used in Cinerama theatres because of absence of side distortion; it has an embossed linen finish and a backing of aluminum-pigmented vinyl; it comes in 38 to 50-inch widths. The drapery, similarly backed, has a light grey linen finish. The "room divider" fabric is coated both sides with a non-embossed finish in neutral colors and weighs 8 oz. per square yard.

**Magnecord Division, Midwestern Instruments**, 41st & Sheridan, Tulsa, Okla. New **Editor II** (P-75), professional type recorder-amplifier, 7½ & 15 ips, simultaneous playback heads. Other models include M-90 console, portable and rack; P-60 **Editor**; P-63 Tape Transport and portable recorder; PT6BN, binaural; M90 and P60 stereophonic, and **Magnicordette** stereo, portable or in wood cabinets.

# Product Review

**New Magnecord Model 728** portable, professional tape recorder, offers electrical payoff and take-up torques, direct drive hysteresis synchronous motor, two speeds, four heads, sound-on-sound recording, push-button control, tape position indicator, fail-safe brakes; pilot lamp, separate record and playback amplifiers, two V.U. meters, optional plug-in transformers, erase heads full or half track or inline stereo at user's option, wind forward or back at 55 seconds per 2400 feet.

**Marcellus Mfg. Co.**, POB 2, Belvidere, Ill. **Booth K-57. Miracle** 16mm sound motion picture projector eliminates claw and framing plate, prime source of film scratching. Quiet operation, 30 per cent more light, separate motors for film advance and rewind, flexible cable drive, large 16-tooth sprocket, 15-watt amplifier, 12-inch speaker.

**Robert C. Merchant**, 2701 Oxford St., Lafayette, Ind. **Booth E-26.** Custom language-teaching equipment. Remote control. Compensated for crystal microphones and earphones as furnished. Earphone volume adjustable by students. Model 758DL provides for dual channel use, specifically designed for language and speech correction lab use.

**Miles Reproducer Co., Inc.**, 812 Broadway, New York 3, N.Y. **Walkie Recordall Model CC**, self-contained in brief case type carrier, 8 lb., dry battery powered, records 90 minutes on each side of a Sonaband. \$450.00. Voice actuated, to be left unattended, add \$90.00.

**Miller Manufacturing Co.**, 3310 E. Roxboro Rd., N.E., Atlanta 5, Ga. **Booth C-15.** New improved models of self-adjusting projector tables, new types of top materials, casters.

**Minnesota Mining & Manufacturing Co.**, Duplicating Products Div., 900 Bush St., St. Paul 6, Minn. A combination microfilm reader and enlargement printer, the **Thermo-Fax**, projects the microfilm image on a reading screen and then, on pressing a button, turns out an 8½x11" copy, on special white paper, in less than 10 seconds. The reader-printer operates on 100 v AC, needs no running water, can be operated anywhere. It measures 25" high, by 17x19", weighs 85 lb. Equipped with one of four lenses, \$629; two lenses, \$695.50. Copy paper comes in 250-print rolls, averages seven to eight cents per copy.

**"THERMO-FAX" MICROFILM  
READER-PRINTER**

**Miratel, Incorporated**, 1080 Dionne St., St. Paul 13, Minn. Miratel K58 series monitors (8", 14", 17" and 21") for closed circuit TV, feature 8 megacycle video band width for plus-600-line resolution, stable vertical hold circuitry for industrial cameras, 90-degree aluminized picture tubes, space-saving cabinet design. Three chassis plug separately into power supply for easier service access. \$215 to \$259. Built-in sound (amplifier, twin 6" speakers, front volume control) add \$15.

**National Carbon Company**, 535 Fifth Ave., New York 17, N. Y. **The Everready Energizer** is a new leakproof alkaline cell which will give up to ten times longer service than the

standard flashlight battery at approximately three times the cost. This development is likely to prove of special importance in the AV field for use in the new battery-powered tape recorders and disc record players. The new cell, like the old, is hermetically sealed and encased in steel. It comes in two sizes, the "D," approximately 20 amps, weighing 3.8 ounces and the "half-length," approximately 8 amps, weighing 1.6. Each cell has a nominal voltage of 1.5.

**National Telefilm Associates**, 10 Columbus Circle, New York 19, N. Y. **Booth F-36.** Music shorts, spotlights, bouncing ball, and a broad variety of cartoons newly released for 16mm sale, color per reel \$60; b&g \$25. Also new feature releases, including "Bells of St. Mary's," "High Noon," "Cyrano de Bergerac," "Gulliver's Travels."

**National Theatre Supply Co.**, Educational Television Products Division, 92 Gold St., New York 38, N.Y. **GPL** (General Precision Laboratories) closed-circuit ETV equipment, now distributed through the NTS network. GPL "500", single unit TV camera has built-in controls, operates from ordinary line current, features "add-to" facility for adding accessories. In use in more than 40 schools and colleges. **GPL Projection TV System** affords large-screen viewing for audiences of up to 1,000.

**Newcomb Audio Products Co., Inc.**, 6824 Lexington Ave., Hollywood 38, Calif. **Booth T-143. Newcomb Dependable** classroom record players and radios emphasize trouble-free service. Transformer-powered for best performance, maximum safety. Easy-to-service construction. Also Dependable public-address amplifiers and transcription players.

**Neumade Products Corporation**, 250 W. 57th St., New York 19, N. Y. **Booth T-147.** The **Neucue** hand punch cue-marks simultaneously three frames on 16mm films, invisible on TV receivers but easily seen on monitors. The Neumade-Shepard electronic splicer effects fast permanent welds on 16mm or 35mm acetate- or coronar-based film, without use of cement, adhesive or solution of any kind. High frequency current causes .03 inch overlap to fuse in less than one second by internally generated heat.

**North American Philips Co., Inc.**, Hi-fi Products Div., 230 Duffy Ave., Hicksville, New York. **Booth G-41.** The Norelco **Continental** is a 3-speed, dual-track, portable tape recorder designed by Philips of Netherlands. Special 0.0002" air gap in magnetic head makes possible extended high-frequency response even slower (1⅞" ips) speed. Built-in twin-cone wide-range magnetic speaker; dynamic microphone. A new line of Norelco FRS speaker enclosures is available for three types of Norelco speakers, and can be used with most other speakers also.

**"CONTINENTAL"  
TAPE RECORDER —  
PORTABLE MODEL**

**Optics Manufacturing Corp.**, SE cor. Amber & Willard Sts., Philadelphia 34, Pa. **Opta-Stat** compound neutralizes electrostatic charge on plastic, glass, metal, etc. Keeps lenses dust-free, prevents static on film transport surfaces. 1 oz. \$2.50. **Newlo** slide binders, made of German optical glass reportedly free of Newton Rings effect. 35mm size \$2.95 for 20; 2¼" size \$2.95 for 12.

**ORRadio Industries, Inc.**, Shamrock Circle, Opelika, Ala. Irish No. 400 **Fortified Double Play** magnetic tape doubles playing time and reduces stretching because of its specially reinforced 60-gauge DuPont **Mylar** polyester base, tested under a 3-pound pull without distortion. **Ferro-Sheen** process bonds oxide permanently to base and its high gloss minimizes wear. At 3 3/4 ips a 7" reel of 2400 feet of Irish **Fortified Double Play** tape will record single track for two hours, dual track for four. Six types of tape are offered to meet all purposes. An ingenious edge-notched reel checks "spilling," unwinding of tape. The new Irish reel measures 5 3/4" instead of the conventional 5".

**OPPOSING NOTCHES ON TAPE REEL ANCHOR RUBBER BAND, PREVENT SPILLING**

**Oxalid Division, General Aniline & Film Corp.**, Ansco Road, Johnson City, N. Y., **Booths N-73 and N-74**. Component Parts of the **Oxalid Projector-Printer Kit** utilize two reproduction processes. The dry developing diazo or direct copy method produces transparencies directly from any translucent or transparent master. This method permits a wider variety of colors, overlays and special effects. The second, a reflex photocopy method, makes transparencies from any original, producing an image first on a paper negative, then transfers it to the positive which becomes a transparency ready for projection or reproduction. These methods provide extensive copying versatility and the operation is practically fool-proof.

**OZALID KIT MAKES TRANSPARENCIES FOR OVERHEAD PROJECTION**

**Pentron Corporation**, 777 S. Tripp Ave., Chicago 24, Ill. **Booth T-142**. **Audicord Tape-Teacher**, new dual-channel tape recorder and play-back provides separate parallel recording channels for teacher and for student, the teacher channel guarded against accidental erasure. Comes in either self-contained portable or custom installation models. Low cost bracket.

**Perceptual Development Laboratories**, 6767 Southwest Ave., St. Louis, Mo. The **Perceptoscope** multi-function projector accommodates up to 600' of 16mm motion picture film for skills training purposes. Frames can be held for any interval without scorching; can be flashed as fast as 1/24th of a second, can be projected in motion at variable speed from 1 to 24 frames per second, and can uniquely super-

impose two projected images simultaneously. Accessories include reading and timing films, projection lens focal length modifiers, angle prisms, etc. A tape recorder hookup provides for automatic programming. Adding-subtracting electronic frame counter facilitates film analysis.

**Plastic Products, Inc.**, 1822 E. Franklin St., Richmond 23, Va. **Booth T-145**. Luxout light control plastic vinyl draperies now come in attractive prints as well as in solid colors. Closed, they seal out unwanted light and foster the use of all type of AV equipment. Open, they add warmth and charm to any room. Exclusive **Greek Key** heading seam was designed to withstand hard usage.

**Polacoat, Inc.**, 9710 Conklin Road, Blue Ash, Ohio. **Booth M-63 "Lenscreen"** Model 625 provides a rear-projected image, 25"x25", in undarkened room, to permit note-taking, active recitation periods during projection even under difficult classroom conditions. \$64.50; with stand \$74.50.

**Polaroid Corporation**, Main Street, Cambridge 39, Mass. **Booth R-113**. New print copier cakes duplicates from Polaroid photos in 60 seconds. Measuring only 6 1/2"x9 1/2", the copier has built-in lens, lights and timer. Three models, choice depends on camera with which copier is to be used. \$29.95.

**Premier Materials Company**, 3717 N. Halsted St., Chicago 13, Ill. Fold-away projector table offers multiple electric outlets with toggle switch controls, plus a softly illuminated opening in the table top for viewing slides and other subdued light operations. 18x20" wood top, 1" tubular steel legs. 29" high. Folds almost flat. \$19.50. With 2" casters add \$1.50.

**Projection Optics Co., Inc.**, 330 Lyell Ave., Rochester 6, N. Y. **Booth M-72**. The new **Transpaque, Jr.** has smallest projection head without even fractional loss of screen image brilliance. It supplements the present **Transpaque II**, which features flexibility, showing either transparent or opaque copy, from any distance to any desired screen size, through simple change of components.

**Psychotechnics, Inc.**, 105 W. Monroe St., Chicago 3, Ill. **Shadowscope** reading pacer, controlled moving lighted area paces reading speed. Used in developmental reading laboratories and other remedial reading instruction. \$94.00 f.o.b. Lafayette, Ind.

**Pyramid Enterprises**, 3815 Trimble Road, Nashville, Tenn. New items include: Symphonette Miraphon record player with 4-speed turntable, biaxial speaker, 10-watt push-pull AC amplifier. Also, Symphonette electronic components in a mobile unit that may be wheeled from class to class. And, a mobile **Listening Cart** incorporating four to eight individual headsets and volume controls, one or two turntables or tape playbacks; available with either one or two amplifiers.

**Radiant Lamp Corp.**, 300 Jelliff Ave., Newark 8, N. J., **Booth N-76**. New 1200w T12C-13D 10-hour Projection lamps available in both medium prefocus and special Bell & Howell bases. Can be used for increased screen illumination when recommended by projector mfr. (16mm sound models) Med. pref. base lamp, A.S.A. code DHT, list \$7.60 B & H base lamp, A.S.A. code DHV, list \$8.40.

**Radiant Manufacturing Corporation**, 8220 N. Austin Ave., Morton Grove, Ill. **Booth J-51**. A completely redesigned **Autoelectric** screen, and the exclusive Radiant educational line. Featured will be the new **Uniglow** surface, combining the brightness of beaded with the side lighting of the matte, the new screen material gives the widest viewing angle ever developed.

**Radio Corporation of America**, Front & Cooper Streets, Camden 2, N. J. **Booth F-33**. New **"Life-Tested"** 16mm sound motion picture projectors; 1200w lamp increases light on screen 20%. New synthetic sapphire pressure shoe and nylon sprocket shoe. Built-in-lubrication. Single-case "Junior," 7-watt amplifier for audiences up to 400; two-case "Senior," 15-watt, for up to 1,000. New **"Scholastic"** record players and tape recorders, extra rugged for school use. Model EDR-2 offers 4-speeds, 3-speaker "Tri-Coustic" sound, PA input, external speaker outlet, individual volume, bass and treble controls. Model EDR-1 offers two-speaker sound, and carrying-guard for tone arm. Tape Recorder, ADT-1, has 3-speaker sound, two speeds, fool-proof push-button controls.

**Rapid Film Technique, Inc.**, 37-02 27th St., Long Island City, N. Y. New film is protected from scratches by the **Rapid-treat** process; older film takes on longer life and better appearance when treated by the **Rapidweld** process, which removes scratches in both emulsion and base.

**Rayoscope Company**, 358 N. Sandusky St., Delaware, Ohio. Microprojector Model F-B 58, introduced June, 1958, has self-contained white base screen, high white light for stained specimens, no heat on specimens, precise optical alignment, standard size eyepiece and tube, extension post for larger field and higher magnification, self-contained storage case.

**RCA Service Co.**, Camden 8, N. J. **Booth F-33**. Electronic trainer, originally developed for the Armed Forces, is now available for civilian purposes. Many schools reportedly use them to simplify electronics instruction. Model 161 is instructor's demonstrator, Model 121 the student laboratory set. Catalog available.

STUDENT GETS LAB PRACTICE ON RCA ELECTRONICS TRAINER

**Reed Research, Inc.**, 1048 Potomac St., NW, Washington 7, D.C. Dual channel tape recorder, **Reed Educorder**, provides simultaneous and binaural audition of two different recordings from one tape; especially suitable for language instruction where student records on second channel after hearing instructor's pronunciation on the master. Push-button playback compares the two.

**Reeves Soundcraft Corp.**, 10 E. 52nd St., New York, N.Y. "Lifetime" recording tape, recording blanks, styli.

**Rek-O-Kut Co., Inc.**, 38-19 108th St., Corona 68, N. Y.

**Rondine** 2- and 3-speed turntables, \$59.95 - \$129.95. Turntable arms feature self-locking micrometer gram weight adjustment, offset bend to compensate for geometric tracking error, acoustical damping. **Audax** monaural pickup arm kit converts to stereo with \$4.95 kit. Micro-poise stylus pressure gauge, on principle of pharmacist balance, weighs 2 to 9 gram stylus pressure on all types of cartridge, \$3.95.

**Revere Camera Co.**, 320 E. 21st St., Chicago 16, Ill. Coming soon, Model 204 Revere Tape Recorder. 2-speed, 10watt output, push button controls, instant stop, automatic stop at end of reel, black case with grey trim, ceramic microphone. Slightly larger than the popular Wollensak recorder, it will be in the medium price range.

**Robins Industries Corp.**, 36-27 Prince Street, Flushing 54, N. Y. New TS4A tape splicer features replaceable cutter cartridge, providing mitre and trimming cuts by shifting knob. Numerous other accessories for the phonograph and tape recorder user include tape threader, storage cans, head cleaner, needle brush, cleaning cloth, protective envelopes, etc.

**Safe-Lock, Inc.**, 870 W. 25th St., Hialeah, Fla. **Booth T-155**. New extra-high (56") Model 203-56 **Project-O-Stand** features 360 degree clutch type locking collars on legs that nest under table for 1-hand carrying or storage. 13 lb. \$39.75.

**H. H. Scott, Inc.**, 111 Powdermill Road, Maynard, Mass. Adapter to convert monaural to stereo, the **Stereo-Dapter** controls two separate amplifiers from a central point; master volume control; no internal changes required when used with Scott amplifiers. \$24.95.

**Seal, Incorporated**, Shelton, Conn. **Booth L-61**. New **Educator** model dry mounting press is designed specifically for school use and will be sold and serviced through audio-visual dealers. Mounting tissue from 2½x3½" to hundred-foot rolls. Chartex dry mounting cloth.

**Shure Brothers, Inc.**, 222 Hartrey Ave., Evanston, Ill. New stereo professional dynetic phono cartridge, M3D, completely compatible for playing stereo discs either stereo-phonically or monaurally, or monaural discs. \$45.00. Shure microphones range from miniature unit weighing less than 1/6 ounce to broadcasting and recording types.

**Smith System Manufacturing Co.**, 212 Ontario St., SE, Minneapolis 14, Minn. **Safelock** portable combination locked storage cabinet and projection table Model 42, heavy duty 3" braked casters, over 11 cu. ft. storage space, adjustable shelf. Also specially designed, all-steel film, filmstrip and slide cabinets, used separately or stacked uniformly on handy cart.

**S.O.S. Cinema Supply Corp.**, 602 W. 52nd St., New York 19, N. Y. Electronic TEL-Animaprint Hot Press enables AV staff, students and other personnel to produce professional looking lettering fast, dry, in perfect registration. Posters, presentations, training aids, captions and titles are prepared quickly and efficiently. Prints on any surface—acetate, cardboard, paper and even glossy photographs. Ordinary printer's type in virtually any size or style is heated and impressed through colored foil. \$495.00.

TEL-ANIMAPRINT "DO-IT-YOURSELF" HOT PRESS PRODUCES PROFESSIONAL PRINTING

**Spindler & Sauppe, Inc.**, 2201 Beverly Road, Los Angeles 57, Calif. **Booth M-71**. A new series of automatic slide projectors is to supplement the well known Standard **Selectroslide**. A deluxe 1200-watt model carries a 48-slide continuous slide magazine with steel slideholders. Change-time has been stepped up, and plug-in timers give added flexibility. Further units soon to be announced include an "Economy" model, a remote-control reversing model, a 48-slide remote selection model, a 96-slide continuous projector, and a 2¼"x2¼" continuous model.

SELECTROSLIDE 1200, FIRST OF NEW SPINDLER & SAUPPE MODELS

# Product Review

**Standard Projector & Equipment Co., Inc.**, 7106 Touhy Ave., Chicago 31, Ill. **Booth F-37**. A mechanical filmstrip re-wind is a new addition to the **Standard** projector line. Two sizes of filmstrip previewers, an automatic slide projector, and a complete line of screens, and of filmstrips and slide projectors.

**Stewart-Trans-Lux Corp.**, 1161 W. Sepulveda Ave., Torrance, Calif. Now offer three types of seamless one-piece rear projection screens—**Luxchrome**, for projection under room-light conditions; **Process**, for photographic backgrounds; **TV Blue**, for telecasting live action against projected background; all sizes from table-top to large set proportions.

**The Stik-a-Letter Co.**, Rt. 2, Box 286, Escondido, Calif. Die-cut gummed letters, conveniently arranged in indexed packaging. Two styles, three sizes (1", 1½", 2"), seven colors (red, yellow, blue, green, black, white, gray). Sets, up to 1750 characters \$6.50.

**Stromberg-Carlson**, Special Products Division, Rochester 3, N.Y. New high-fidelity portable phonograph, the **Audio-Instructor**, Model PR-10, straight AC push-pull 10.7 watts, adequate for large auditorium or gym without distortion or for external speaker without overload. Two wide-range cross-over network; 4-speed turntable, 40 to 16,000 cps response, speaker selector switch, separate bass and treble controls, 26½ lb.

**Strong Electric Corp.**, 87 City Park Ave., Toledo 1, Ohio. Arc-powered slide projector for use in large auditoriums, delivers approx. 7500 lumens to screen. **Trouperette** spotlight particularly suited to theatricals in schools, etc.

**Tecnifax Corporation**, 195 Appleton St., Holyoke, Mass. Eleven brilliant, colored, ammonia-developing diazotype films (Tecnifax Diazochromes) for easy and economical production of transparencies for overhead projection. Free literature on production and presentation techniques; free, continuous training program at Tecnifax factory in artwork, photography, serography, photo-copying and diazotypy.

**Technical Service, Incorporated**, 30865 W. 5-mile Road, Livonia, Mich. **Booth I-47**. Completely new **TSI Teclite** 16mm sound projector, replaces DeVrylite "5" and "15-R." Fresh styling, 18 new operating features, compact, lightweight, single-case unit with built-in detachable 8" speaker, and, optional, external speaker for auditorium use. Also, new, Model DU-6, a compact 25½-lb. version of the DU-5, with built-in 14" TV size screen, two lenses for choice of direct or rear projection. **Moviematic D-4** is a 28 lb. compact model with choice of magazine or reel arm projection.

**Tela Electronics Division**, Meilink Steel Safe Co., 901 Livernois Ave., Ferndale 20, Mich. New, Model 9-12, **GianTVision** television projector fills screens up to 12'x15', either "off the air" or via closed circuit. Weighs 375 lb. in padded shipping case. Has built-in dual 10" speakers and connections for auditorium audio system. Completely self-contained in 23"x21"x61" high steel cabinet. Sale or lease to education, industry, commercial enterprises.

(See Photo on page 354)

**TelePrompter Corporation**, 311 W. 43rd St., New York 36, N.Y. **Booth M-66**. Group communication system heretofore applied mainly to industrial meetings, now being extended to education. **Telemation** presets and locks in place all audials and visuals for split-second cueing. **TelePro 2000** handles 2x2 and strip film. Modified **GPL 611A** GPL large screen TV projector.

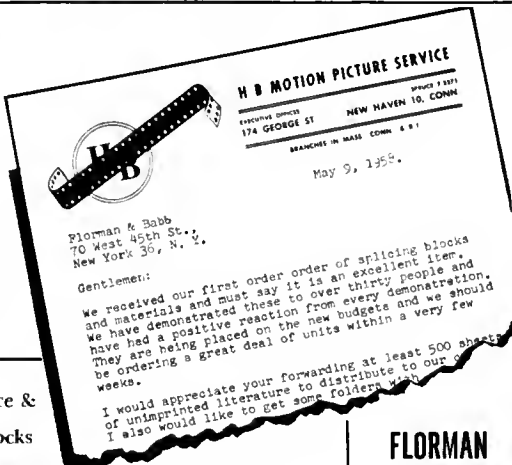

**Thompson-Winchester Co.**, 1299 Boylston St., Boston 15, Mass. Stick-Tack Discs, adhesive both sides, to stick paper, etc. to walls or other surfaces. Re-usable. \$1 for 328.

**Triangle Projectors, Inc.**, 3706 Oakton St., Skokie, Ill. Bell & Howell sound projector, 15-watt, in light-tight case; 18"x13" built-in plastic screen rear projection (14mm lens), or conventional use with 2" lens. Automatic shut-off switch. Accommodates 2000' reels, 1000-watt lamp. Luggage type case, closed, measures 18"x10"x25". \$698.50.

## MAGIC "MYLAR" SAVES CUSTOMER \$35

**MACKAY BARRON, H. B. MOTION PICTURE SERVICE, NEW HAVEN, CONNECTICUT, SAVED 7 FILM STRIPS FOR A CUSTOMER. SAYS MAGIC "MYLAR" AND F & B BUTT SPLICE AND FILM REPAIR BLOCKS ARE "EXCELLENT ITEMS."**

Mr. Barron repaired seven film strips for a customer right on the spot demonstrating how simple and convenient it was to save these valuable films using **MAGIC "MYLAR"** and the **F & B Blocks**. In this instance he saved his customer \$35. It's easy and inexpensive to repair torn and damaged films, replace torn perforations, butt-splice without losing a single frame, and strengthen overlap splices. Ask your local A-V dealer for **F & B Magic "Mylar"** and the **F & B Butt-Splice and Film Repair Blocks**.

Y. **Eumig C3R Continental** 8mm motion picture camera features electric eye exposure control, 5 speeds, drop-in roll loading, 25 foot run on one winding, three-lens turret, full image viewfinder. With one lens \$129.95; with 3 lenses \$169.95.

**United States Projector Corporation**, Delaware Bldg., Federal Way, Wash. **Booth S-125. Ava Pixalog**, new 16mm silent filmstrip projector, shows strips taken single-frame in 16mm camera. Pre-focused projection lamp, automatic framing device, precision focusing, color-corrected lenses and power-cooled mechanism. \$49.50.

**United World Films, Inc.**, 1442 Park Ave., New York 29, N. Y. **Booth R-110.** Latest releases include **Making a Living**, six social studies films; **The World's a Stage**, nine 10-minute excerpts from Shakespearean plays enacted by Old Vic repertoire cast; **Diving Is Fun**, three instructional films in color featuring Olympic champion Vicki Draves; **The Nativity**, 19-minute color film of Renaissance masters; **The Prodigal Son**, 27-minute color film from **His Way, His Word** series.

**Vacumate Corporation**, 446 W. 43rd St., New York 36, N. Y. Shrunken, brittle, dry film revitalized to go through printers and projectors. Vacuumating film for better projection, longer life. **No-En** film treatment for continuous projection.

**Vari-Typer Corp.**, 720 Frelinghuysen Ave., Newark 12, N. J. **Booth C-16 Headliner — Model 400**, most advanced office machine for photo-composing headlines. Automatically photo-sets display type from 12 to 72 point sizes. Many modern and classic type styles available on Typemasters which are changed as easily as changing phonograph records. Produces clean, smudge-proof prints permanently fixed on plastic coated 35mm film. Ready in seconds for any method of reproduction. **Model 400** also produces a positive image which can be mounted on acetate and reproduced by many methods to a foil for Audio-Visual projection.

**Victor Animatograph Corp.**, a Division of Kalart, Plainville, Conn. **Booth R-111.** Sovereign Model 25 Animatograph offers 25-watt amplifier, color-coded threading path and visual one-spot lubrication. Victor Soundview 35mm Sound Slidefilm projector features automatic operation for high or low frequency signal, push-button remote control, 300- and 500-watt models. **Somco** focal length modifier fills screen without moving projector. \$29.50.

(See Photo in Next Column)

**Viewlex, Inc.**, 35-01 Queens Blv., Long Island City 1, N. Y. **Booth O-96.** New Model V-500 combination filmstrip and slide projector accommodates single or double-frame 35mm filmstrips for vertical or horizontal projection as well as 2x2 and bantam slides in all kinds of mounts. Completely sealed lamphouse eliminates light leakage; cooling fan is mounted vertically at rear of projector. Built-in magnifying

optical pointer and an automatic feed and takeup attachments that moves filmstrips, wound head in, from can to can without rewinding. With case \$109.50.

**V-M Corporation**, Benton Harbor, Mich. A new V-M stereo kit converts Tape-o-Matic models 710 or 710A into all-stereo units that play both stacked and staggered stereo tapes. The kit, installed by any capable service man, \$25; V-M matching amplifier-speaker Model 166, to team with the 710 or 710A; costs \$75. Stereo discs are accommodated by **Stere-O-Matic** Model 1201, featuring stereo cartridge and jacks and a stereo:monaural switch. Tone arm is resonance-free, easily adjustable for any cartridge weight, and compensated to eliminate variation from bottom to top of a stack of records. Tracking angle variation has been reduced to 2-degree maximum.

**Wallach & Associates, Inc.**, 1589 Addison Road, Cleveland 3, Ohio. New model mobile cabinet. Low-cost open film storage racks, adjustable to meet changing requirements. All metal sectional cabinets for the expanding record library.

**Warren Conrad Portman Co.**, 41 McQuesten Pkwy., N. Mount Vernon, N. Y. Professional animation, titling and special effects stand; ball bearing mounted, counter balanced carriage takes any 35mm or 16mm camera, travels 62". Complete line of more than 40 accessories is described in 10-page catalog. Basic stand \$1,495; compound and table top \$1,640.

**Webcor, Inc.**, 5610 W. Bloomingdale Ave., Chicago 39, Ill. **Booth T-151.** Complete new line of stereophonic and monaural tape recorders, and portable stereo record players; also wide choice of consoles and multiple matching speaker cabinets. Introduced only a month ago, the stereo line's enrichment of musical reproduction promises a new dimension to music appreciation studies. Stereo portable players from \$129.95.

**Webster Electric Co.**, 1900 Clark, Racine, Wis. New **Ekotape 310** features a double recording head for specific audiovisual applications. A 1000-cycle note, push-button recorded on the second tape channel, activates automatic soundslide changers. There are separate erase heads for the two channels. Specifications include 12-watt amplifier, V-U meter, two-speed (3¾ and 7½ ips), tape-out switch, program selection finder, heavy-duty speaker, 30—15,000 cps frequency response, record knob safety features.

**Westinghouse Electric Corp.**, McArthur Ave., Bloomfield, N. J. **Booth B-13 and B-14.** A new, shorter, wafer-stem type **Focus-Lok** projection lamp is added to the distinguished "Blue Top" line. The new lamp provides the shortest lamp and socket combination and permits the most convenient insertion and removal of any projection lamp made. Outstanding features include — Better Indexing, Positive pressure Electrical Contacts, Lamp Locked Into Socket, Easiest Lamp Replacement, Positive Lamp Alignment and Space Saving Lamp-Socket Combination.

**VICTOR "SOVEREIGN" HAS 25-WATT  
AMPLIFIER**

**Wilcox-Gay Corporation**, 503 W. Seminary, Charlotte, Mich. Complete line of packaged stereophonic tape recorders, accessories, diagonal speakers, tape decks, stereo kits, pre-amplifiers.

# Have you heard?

## Alex Dreier Salutes A-V

The field of audio-visual communications will be saluted by Alex Dreier, noted radio and TV commentator, during a nationwide radio program Sunday, July 27, over NBC-MONITOR, according to William W. Birchfield, President of the National Audio-Visual Association.

The program will be broadcast at 6:05 p.m. (E.S.T.) over the entire NBC network of nearly 200 stations. Dreier's tribute will tie in with the National Audio-Visual Convention and Exhibit, the world's largest audio-visual meeting and trade show, which starts Saturday, July 26, in the Morrison Hotel in Chicago.

The broadcast is one of a new series called "America On The Go," featuring Alex Dreier and sponsored by North American Lines, Inc., Fort Wayne, Indiana. Each of Dreier's broadcasts will salute an American activity at the time of its annual trade show or exposition. This is the first time in history that nationwide consumer attention has been directed to industrial expositions and shows. To date Dreier has saluted such fields as boating, industrial atomic energy, electronics, aircraft and missiles, design engineering, public water supply, and the food service industry.

Dreier will tell his audience of 9,000,000 radio listeners that the use of audio-visual tools for teaching and training has grown tremendously since World War II. He will explain that through these modern tools it is possible to teach more in less time and increase understanding and skill with less cost in dollars and effort.

Other areas in modern American life, such as industry and business, government, and the religious field, lead in applications of these modern audio-visual methods. Dreier will say, due to lack of dollars in educational budgets to provide modern tools for today's teachers, and despite the proven effectiveness of audio-visuals, ironically, an accomplishment of educational research.

Dreier will outline the work of a typical audio-visual dealer, who must know every conceivable sight-and-sound technique of teaching, understand the way the learner's mind will work in a wide variety of situations, and know all about a broad range of equipment and materials, each with

its own specific contribution to make. The A-V dealer, he will show, must be able to work at ease and with full understanding of the problems of the educator, the industrial trainer, the businessman, the religious field worker, and community leaders.

## Purdue To Have New Library

A library of television and radio films and recordings pertaining to contemporary events in Indiana history is now in the making and its permanent home will be the Film Library facilities in the new \$10,000,000 Memorial Center at Purdue University.

The announcement of this project has been made jointly by Joseph Higgins, WTHI, Terre Haute, president of the Indiana Broadcasters Association, and Dr. Frederick L. Hovde, president of Purdue.

Insofar as it is known, this is the first state-wide venture in this particular field.

One immediate service of the per-

manent library center will be the sorting, culling and classifying of material for proper filing. Under the new project, this work will be done by the staff of the Purdue Audio-Visual Center under the direction of Lloyd D. Miller. Serving as coordinator of this special project at Purdue will be Jack Carroll of the WBAA staff. The committee of the IBA in charge of the project is headed by Ronald Ross, WPTA, Fort Wayne.

As the material which comes in from the various radio and television stations is classified and filed, it will be made available for public use and service.

Included in the material that will be collected in this new library center will be radio and television recordings, special film clips, still pictures that are suitable for reproduction and other items of similar nature. Active work on this new project will be started as soon as the facilities in the new Memorial Center are ready for occupancy.

## WHEELIT

*moves projection equipment  
quicker, easier, safer*

Saves heavy lifting . . . fatiguing carries . . . has exceptionally easy steering . . . good balance . . . large Formica top wood platforms, sound absorption and absence of vibration, definite locking for stationary projection and all-around dependability. This is why out of 50 California audio-visual co-ordinators attending a demonstration, 49 chose Wheelit.

Illustrated: Folding Wheelit C-402 (on steps) Fits easily into car trunk (left) or small storage area.

Non-folding model No. 1102 for interior use (far left).

**Precision-Built . . . to last!**

All-steel construction (except platforms). Precision workmanship and accurate assembly assure smooth, efficient operation. Capacity up to 300 lbs. Heavy web straps secure loads.

**GRUBER PRODUCTS COMPANY**

Dept. ES, Toledo 6, Ohio

**DAVI Archives Receive  
History of Magnetic  
Recording Industry**

A history of magnetic recording prepared by Minnesota Mining and Manufacturing Company, St. Paul, Minn., was presented to the Department of Audio Visual Instruction of the National Education Association at its recent national meeting in Minneapolis.

Making the presentation for the 3M Company was William H. Madden, sales manager, and the DAVI recipient was Archivist William F. Kruse who accepted the document for the archives committee.

The history traces the development of magnetic recording from the turn of the century through World War II and into the present era, with special emphasis on the important progress made in the late 1940's.

A donation of fifty rolls of magnetic tape was also made to the DAVI archives for recording taped interviews with pioneer workers in audio-visual education.

**Kentucky Has New A-V Ass'n.**

A group representing many geographic areas, and every type and level of audio-visual activity in the state, met on May 10, 1958 at Frankfort, Kentucky and organized the Kentucky Audio-Visual Association.

Objectives of the organization are, in general, to improve and extend the use of audio-visual materials throughout the state, and to promote the development and exchange of audio-visual resource materials.

A policy group and active work committees form the core of the new organization.

Chairman of the Policy Committee for 1958-59 is Dr. Gil Tauffner, Director of Audio-Visual Services at the University of Kentucky.

**U. S. Films Named for  
Festival in Edinburgh**

Twenty-four films—in the non-theatrical class (non-Hollywood type)—have been selected as United States entries in the Edinburgh Film Festival, August 18-25, the National Education Association (NEA) announced today.

Several organizations worked with the CINE selection committee as screening agencies. They include: Educational Film Library; American Medical Association; Catholic Audio-Visual Education; National Council on Jewish Audio-Visual Materials; National Council of Churches of Christ; University Film Producers Association; Educational Television and Radio Center in Michigan; and the Business and Industry Subcommittee of CINE.

**People in the News**

**Davenport, Iowa:** After 48 years of service with Victor Animatograph Corporation, Sam G. Rose retired from all business activities as of May 31.

His experience in photography began as a school boy in 1902 with a 1x5 glass plate camera. He later became the high school reporter and photographer for the Sioux City (Iowa) Journal, using the then available equipment, an 8x10 plate camera and magnesium flash gun. In 1905 and 06 he organized and operated a finishing department for Zimmerman Bros. At the University of Nebraska, he was the photographer for the college annual and the cadet batallion and, on the side, sold stereographs for Underwood and Underwood.

When Alexander F. Victor formed the Victor Animatograph Company, Rose joined as salesman, ultimately becoming sales manager, secretary, executive vice president and in 1946, president.

He participated in the research, development and distribution of the portable stereopticon with arc light, small slides and projectors, portable 35mm motion picture projectors, 28mm safety film projectors and the first 16mm cameras and projectors.

He has assisted in the organization and promotion of several of the associations now active in the audio-visual field. He is one of the early members of the Society of Motion Picture and Television Engineers; is an associate member of Edison Pioneers, and was on the organizing committee of the National Association of Photographic Manufacturers.

**New York, N. Y.:** The Motion Picture Association of America has appointed Mrs. Margaret Gessner Twyman as its director of Community Relations, a post held for many years by Arthur DeBra, who retired last fall. J. Stanley McIntosh continues as Educational Consultant for the MPAA and as Executive Director of Teaching Films Custodians, Inc., the MPAA subsidiary through which educationally important short subjects and excerpts from feature films are made available to schools. These functions are the two formerly filled by Roger Albright and Carl E. Milliken.

**Ann Arbor, Mich.:** Nobel Prize winning scientist Glenn T. Seaborg, has been elected to the Board of Directors of the Educational Television and Radio Center. He will help give direction to the Center's efforts in science programming.

"I believe that the proper use of educational television and visual aids

in general will offer the most important contribution to the solution of today's educational problems," Dr. Seaborg commented. He is professor of chemistry and director of nuclear chemistry research at the University of California, Berkeley. In 1951 he was co-winner of the Nobel Prize in chemistry.

**Los Angeles, Calif.:** Dr. Robert W. Wagner, 40, Director of Motion Picture Production at Ohio State University since 1946, has been appointed new head of the University of Southern California cinema department, it was announced by SC Educational Vice-President Albert S. Raubheimer.

Wagner succeeds Dr. Robert O. Hall who took over as Program Associate with the Educational Radio and Television Center at Ann Arbor, Michigan, in June. Wagner arrives at SC September 1.

A native of Newport News, Virginia, Wagner did both undergraduate and graduate work at Ohio State, taking his doctorate in December 1953.

A winner of the Encyclopedia Britannica Films Fellowship (1951), he was film writer and director for OWI (Office of War Information) from 1942 until 1943, when he became motion picture producer until 1944 with the office of Coordination of Inter-American Affairs.

From 1944 to 1946 he was an information chief with the Ohio Department of Public Welfare. From 1946 until 1950, he had summer teaching assignments at the University of North Carolina, Colorado State College, and SC, the latter in the summer of 1950.

Married, Dr. Wagner is a past president of the University Film Producers' Association.

**Portland, Oregon:** Merriman H. Holtz, Sr., longtime AV business leader, died suddenly following a very severe heart attack on Friday, May 23. He served as president of the National Association of Visual Education Dealers, NAVA predecessor organization, in 1948-49.

Merriman Holtz was one of the early statesmen of the AV world. He did much to build the AV industry through his efforts in NAVED and other organizations.

### Closed Circuit T-V Conference

College and university administrators who have been considering closed circuit television as an instructional medium will have opportunity to get some first-hand information on its pos-

sibilities and its working at a Conference on Televised Instruction to be held at Purdue University Aug. 24 to Sept. 4.

This conference is being sponsored by the National Association of Educational Broadcasters in cooperation with the Purdue Television unit, under the supervision of James S. Miles.

At this conference, key personnel from ten or twelve of the colleges and universities in which television instruction is being tested will be brought in to serve as conference leaders. Such phases in relation to the program as administration, financing, scheduling, curricula, methods, research, required physical equipment and many others

will be discussed. Registration fee is \$100.

### Dostal Forms Language Lab Co.

John J. Dostal, formerly audio-visual sales manager for RCA and more recently an audio-visual management consultant, has announced the formation of a new company—Language Laboratories International. The new company, to be located in Garden City, N. Y., will operate as a distributor in the New York metropolitan area for Magnetic Recording Industries, designers and manufacturers of language laboratory equipment.

## THE FROG PRINCE

(Contemporary Films, Inc., 13 East 37th Street, New York 16, New York) 10 minutes, 16mm, sound, black and white, n.d. \$50. Designed by Lotte Reiniger and produced by Primrose Productions.

### Description

*The Frog Prince* uses animated silhouettes to visualize the fairy tale about a frog which turns into a handsome prince when befriended by a beautiful princess.

The narrator begins his story—"Once upon a time there lived a king . . ." This king was given a golden ball possessed of magical powers assuring a royal wedding for one of his three daughters. To each daughter, the king tossed the magical ball and each in turn failed to catch it until the third and prettiest daughter caught

it. The delighted king gave her the ball and she hurried out into the garden to play with it. Suddenly, the ball bounced from her grasp and dropped into the garden well. Heartbroken, the young girl began to cry. A frog hearing her weep jumped to the rim of the well and volunteered to fetch the ball from the depth of the well if the girl would promise to eat with him, play with him, and be his friend. Without hesitation the girl consented and received her ball in exchange.

Forgetting the promise in her haste to return for dinner, the princess ran back to the palace. Shortly, there was a knock at the door. When the door was opened, there sat the frog who demanded that he be admitted. The king upon hearing of his daughter's promise insisted that the frog be brought into the dining room and received as a guest. "After all," he said, "a promise is a promise."

The young princess was horrified at the thought of touching the frog, but, finally, lifted him to the table where she fed him and he danced on top of the golden ball. This amused the king but the daughter was angered and ran crying to her room. Up the stairs the frog leaped, step by step, carrying the golden ball with him in an effort to comfort the princess. The frog knocked on the princess's door.

Hearing the rap on the door, the princess opened it, took the ball, and kicked the frog out of the doorway. When the disappointed frog began to cry, the princess reconsidered, opened the door, and began to play with him. As she tossed the golden ball to him, the ugly frog unexpectedly turned into a handsome prince who entreated the princess to be his wife. The king gladly gave his consent and ". . . they all lived happily ever after."

### Appraisal

With black paper, a pair of scissors, and imagination, Lotte Reiniger creates a unique technique called "silhouette animation" achieving life-like movement while retaining the magical quality of make-believe. *The Frog Prince* is but one of over a dozen such films produced in this manner which can be profitably used by teachers of kindergarten and primary grades. Their effectiveness in using two-dimension illusion to tell a fairy tale suggests a wide usage in story-telling activities. Students in motion picture production will find the technique used in these films interesting to investigate. The musical score is especially noteworthy as it corresponds, mood by mood, with the narrative line of the story. For this type of photography, however, a completely darkened room is recommended to bring out the full range of blacks, grays and whites in the film.

## IRON CURTAIN LANDS (Post-Stalin Period)

(Grover-Jennings Productions, Inc., 4516 North Hermitage Avenue, Chicago 40, Illinois) 20 minutes, 16mm, sound, color or black and white, 1958. \$175 or \$90. Teacher's guide available.

### Description

This narrated documentary film presents an introductory profile to the Post-Stalin communist society. The production reveals many activities and much of the environment of the people in the Soviet Union. Their culture seems to contrast intense, state-centered communism to strong, long-lasting traditions and a basically enduring independence of the peasant class to that of a thoroughly propagandized mesmerized working class and party mem-

bers. Some orientation is given to two contrasting satellite countries — Poland which has a strength of tradition that has resisted changes and Czechoslovakia which has been dominated with a pattern which is more typically communistic.

A map visually demonstrates that the Soviet Union is an immense land mass straddling Europe and Asia. The productive farmlands lie within a very small belt. Russia is seen as a vast plain stretching outward toward all horizons. Its rivers move slowly through it and, being knit together by canals, form important means of transportation in modern times as they did in the past. Most of the Russian towns have been built near these waterways around the forts or "kremlins" of the early Viking rulers.

The peasant life of rural Russia continues almost as it did before the Revolution. The farm land has been collectivized and the machinery is pooled and tightly controlled by the communist overseers. Scenes are shown of a chicken farm.

The scenes of Moscow etch a sharp contrast to those of rural Russia. Moscow is characterized by the beautiful Russian Orthodox Churches, palaces of the Czars, better dressed populace, and the shops and buildings. Gum, the government department store, is a three-storied building with open corridors that are thronged with people — as many as 200,000 in a day. The ornate splendor of the subway is contrasted with the sordidness of the large slums which crowd Moscow. Building construction is shown to be clumsy, slow, and of poor workmanship.

Moscow's streets do not appear as crowded as ours. They have modern cars and busses, but not enough for the existing population. Consumer goods

in Russia are generally scarce and high priced, though the quality is poor.

One of the 80,000 Pioneer Camps open to children from 8-13 years of age is pictured and the philosophy behind the existence of these camps is discussed. A series of short sequences deals with Moscow University, mass communications, juvenile delinquency, artists, and the ballet. Religion is treated more extensively. People are shown attending churches which, though fewer than in pre-communist Russia, are crowded.

Warsaw appears in the film much as it did before it was almost completely destroyed during World War II. The determination which the Polish people demonstrate as they rebuild their

city and open worship places is revealed to be a result of their stubborn clinging to tradition. Czechoslovakia makes a strong pictorial contrast because it is dominated by blaring loud-speakers and other evidences of colonial status to a much stronger power.

In one scene Krushchev arrives at an airport and his act of shaking hands seems symbolic of the immense power that those hands unfold. The narration states that the way in which they wield this power will partly depend upon our understanding of the communist world, as well as our wisdom and faith in our ideals.

The mausoleum housing the bodies of Lenin and Stalin in the heart of Red Square is both a literal and figura-

## on your "must" list— a new TSI Projector

This is your invitation to stop at the TSI exhibit at the NAVA Convention — particularly to inspect the entirely new TSI Teelite 16mm projector. It is our sincere belief that this addition to the TSI family will give you a new set of standards by which to judge projectors engineered for educational use.

If you will not be attending, we respectfully suggest that you remind your audio-visual dealer that you want full information on this new TSI projector as soon as available.

*may we put you on our list to  
receive information?*

**RATEOMETER**

**MAKES IT EASY  
TO IMPROVE  
READING**

**★ EASY FOR THE STUDENT**

For ages 10 to 80, the AVR Reading Rateometer encourages self-help in reading improvement. Reading rate is shown above guide bar on ingenious face scale. Students learn its use in minutes; enjoy its guidance in rate improvement.

The easy-to-use Rateometer is now in use in thousands of schools, high schools and colleges.

**★ EASY FOR THE TEACHER**

Teachers require minimum guidance in using the Rateometer. Reading rate improves from 30 to 300%. The Rateometer is adaptable to any program, any length of practice session, any comprehension testing program.

Lifetime electric motor insures clock accuracy and trouble-free service for many years.

Lightweight (2½ lbs.), small size (8½" long) and carry-case carton allow portability and home use by students evenings or weekends.

**★ EASY ON THE BUDGET**

The Rateometer is budget priced at \$35.00—lower in quantities. Equip a whole classroom for the cost of a few pacers of less functional and less effective design.

Actual experience over a 5-year period shows that Rateometer cost runs as low as 37c per pupil.

tive symbol of the heart of Russian communism. The long rows of people filing through the mausoleums are the final lines in this profile.

**Appraisal**

Photographed by Charles Dee Sharp and with educational supervision by Dr. Michael Petrovich, associate professor of history, University of Wisconsin, *Iron Curtain Lands* should be a valuable instructional film for junior high, senior high, college, and adult groups interested in the geography, history and problems of the iron curtain lands. The producer states that there was neither supervision nor censorship by communist officials in the filming of this production. The music was recorded in Russia; the bells are the actual Kremlin bells. The reviewing committee found the film interesting, and felt that it represented a factual film record of the people of these lands. The film was organized, edited, and narrated to provide an overview of life in Moscow and rural Russia. It should lend meaning to some conceptions of the communist lands and provide a stimulus for further study and reading about Soviet Russia and her satellites. The emphasis of the film is on the people—their adaptation and resistance to communism which seems to cause a molding of the communist society. The color of the film which is less than excellent and the too detailed to be easily understood maps do not detract seriously from the general value of the film. Included in each film can is a helpful teacher's guide with footnotes on the film, an outline of the film content, words for reference, correlated text list, production incidents, and a complete narration.

—Wayne Howell

**ANSEL ADAMS — PHOTOGRAPHER**

(International Film Bureau, Inc., 57 East Jackson Boulevard, Chicago 4, Illinois) 20 minutes, 16mm, sound, black and white, 1957. \$150. Produced by Larry Dawson.

**Description**

*Ansel Adams — Photographer* blends into stirring harmony the grace notes of captured, priceless moments with the melody of infinite meaning and emotion. It surveys the person of Adams, his tools and methods, and the product of his artistry.

The music of Scriabin casts a spell upon the viewer before the film has quite begun. In an environment of romance and a setting twice enchanted — first by music, and next by photographic art — Mr. Adams is introduced.

The color and charm of the bearded, dignified, middle-aged artist show

through as he plays the piano seemingly oblivious to any intrusion. He is described as musician, mountaineer, writer, teacher, photographer, and his pictures on the studio walls are referred to in terms of mood, illusion of substance, and universal inspiration.

Follows next a swiftly moving sequence in which the gamut of photographic equipment used by Mr. Adams is identified — cameras, lenses, holders, meters, filters, tripods, and other miscellaneous items including "one ancient eight-passenger limousine with 5 x 9 camera platform on top." The materials are loaded and the sedan pulls hastily away.

On location the meticulous care and high standards of the master photographer are observed in his concern with the image selected on the ground glass of his view camera, the measurement of light reflectances, and the detailed recording of all data — film, lens, filter, lens extension, lens aperture, shutter setting, exposure scale values, and development required.

Back in the dark room, key steps in the process of developing the negative and achieving the final print are shown and evaluated. The mounted print is used to introduce a series of original prints from earlier portfolios. As if to prove that reproductions of his photographs by engravers and printers are also of high quality, another portfolio is presented — "My Camera in the National Parks." Any differences in quality are not readily apparent.

Other phases of the varied work of Mr. Adams are briefly shown — such as performing an assignment for an industrial client and conducting a film test as consultant to photographic manufacturers.

Turning to portraiture, the film next presents an impressive and diverse selection of photographs. The same high standard of excellence is achieved regardless of subject — Papago girl, Father Bonaventure, Jules Eichorn, or Edward Weston.

The culminating sequences constitute an extravaganza of photographic art. The extensive and skillful use of dissolves and camera movement take the viewer as if by magic carpet through a numberless and delightful variety of scenes. Mr. Adams' pictures

seem to be a sort of universal interpretation of the eternally inexpressible. His photographs are presented, in his words, "as images of the endless moments of the world."

#### Appraisal

The evaluating committee feels that the film will appeal to a wide variety of viewers and for a variety of reasons. Classes and clubs concerned with elementary photography will obtain information and motivation needed for greater achievement. The professional or advanced groups will be more impressed and concerned with the outstanding production techniques and artistic qualities.

The film is so designed and treated as to be of value as an interesting and inspiring presentation for various community clubs and organizations. Some viewers will feel that the music which is much in evidence adds a powerful dimension, others will be distracted, and perhaps a few will be annoyed.

The more sophisticated viewer would doubtless prefer a greater depth of treatment into the character, personality, and techniques of Mr. Adams, and happily forego the somewhat extensive accounting of photographic equipment and some rather meaningless tinkering. Regardless of the level of photographic proficiency or sophistication, however, it is believed that all who possess a sensitivity to art should see *Ansel Adams — Photographer*.

—Preston Mitchell

Orkney Island by Dr. William Sladen, medical officer and biologist with the Falkland Islands Dependencies Survey.

It opens by showing the movement of the adult penguins to their breeding grounds by walking and "tobogganing" where eventually twenty thousand of them will gather to form this colony. The film then shows the "ecstatic display" of both the adelic and the chin strap penguins with the accompanying sound effects. This mating display repels other male penguins and attracts the females; however, the film shows that fights between male penguins occur to determine the recipient of the female's affections.

The film continues by showing the building of the nest of stones by the expectant parents some of which are energetic and "honest" in their searching for stones while others steal from their neighbors' nests. Later, two eggs are laid in each nest. The next sequence pictures the female searching for more stones and going to the sea to feed while the lonely male must remain at the nest to protect and shelter

the eggs not only from nature's elements but also from birds which will peck through the unprotected egg and eat the contents. The female finally returns from the sea after two-and-a-half weeks of feeding. Then pictured is the mutual display (the nest relief ceremony or changing of the guard). The well-fed female relieves the undernourished, stiff male who promptly begins a search for more stones. It is then the male's turn to go to the sea and recover some of the forty percent body weight which he has lost. The film shows the male penguins swimming by their magnificent "porpoising" movements which will give them a maximum speed of thirty miles per hour.

Next, the film tells that the incubation period is thirty-five days and pictures the newly hatched adelic and chin strap penguins which are fed by regurgitation by the parents. Then it shows a short sequence of the large elephant seals lying near the nests of the comparatively small penguins. However, the penguins stand their

ground since the seals do not eat them. Also, briefly shown is Dr. Sladen's method for putting metal identification tags and painted numbers on the adelic penguin's flippers.

The film then returns to the chicks which are now five weeks old and group in the "nursery" while the adults go to the sea for food. After the adults return to the colony consisting of thousands of penguins, chick and parent recognize each other and the feeding chase begins. The film shows the chick running after its parent who frequently pauses to feed it by regurgitation.

Next, the film pictures the large, brown, gull-like skua birds as they kill a young penguin that had become separated from the others. Another isolated weakling chick is shown as it fights off the pecks of the skua and hurries back to the safety of the group. Continuing, the film shows an adult penguin being tossed about by the surging water as it desperately tries to reach land. It is successful and hurries to the colony to feed its young.

It is now nearing the close of the season and nine weeks after hatching the young penguins receive their last feeding. They plunge into the water and their awkward swimming movements are a sharp contrast to the beautiful "porpoising" of the adults observed earlier in the film. These awkward movements make them an easy prey for the leopard seal. The film pictures a young penguin being skinned alive and gulped down by a seal; however, many of them survive and will return to the breeding grounds to again complete the adelic penguin life cycle.

#### Appraisal

This film is an amusing, dramatic, interesting presentation which will be appealing to audiences of all ages but will be of particular educational usefulness to junior high, senior high and college groups. It presents an excellent study of animal behavior and adaptation to environment. It shows the constant struggle for survival, the menace of the ever-present enemies of the penguin both on land and in the sea, the struggle with the rigors of the climate, the surging sea and its rocky shores, the competition with other penguins, and the trials of the young, growing chicks. The film also shows the beautifully effective adaptation of the penguins to their snow and ice environment. Since this film is a scientific documentation — actually part of a doctoral thesis — and the first record of the life history of a penguin, it will also be of considerable interest to the advanced zoologist.

—George Vuke

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

## A-V for English Teaching

Junior high school English teachers have had a recent bonanza of audio-materials suitable for instructional purposes and well adapted to library collections either for in-school small group listening, or for loan collections.

Last month we reported on *MANY VOICES-I* recently released by Harcourt Brace. They also have released several other volumes of recordings in this series and *MANY VOICES-II* (Harcourt-Brace XTV 26315/6) designed to accompany and to make more meaningful their "Adventures in Literature, Book 2."

Artistic performance and effective delivery are of great importance in the presentation of the spoken word to students. Some teachers, but not all, are very capable readers and do not need the assistance of such materials as those with which we are concerned. But the most capable reader-teacher can afford to encourage critical comparison of reading abilities to develop listening abilities in students. *MANY VOICES-II* boasts such readers as Martyn Green, the Savoyard of reknown, Carl Sandburg, Alexander Scourby who is developing a fine reputation as a reader, Arnold Moss, Hiram Sherman, Melville Cane and E. Martin Browne. Mary Martin, acting as narrator and reader, offers essential variety which gives the recording a roundness of sounds which is needed.

The recording is organized into six bands involving "Laughing Together" which includes selections from Ogden Nash, W. S. Gilbert and Carl Sandburg; "James Thurber" in which Hiram Sherman reads the hilarious prose selection, "The Night The Bed Fell"; "Henry Wadsworth Longfellow" in which Alexander Scourby delivers "Paul Revere's Ride" with exceptional

effect; "Favorite American Poems" in which such well known American poets as Holmes, Whitman, Whittier, Frost, and Longfellow are represented; "Poems of Suspense and Danger" including "The Charge of the Light Brigade" and "Lochinvar"; and, "The World of Nature" in which the poems of Shakespeare, Wordsworth, Shelley, Sandburg, Cane and Frost are heard.

We are delighted that the editors of *MANY VOICES* have elected to include at least one prose passage in each of the first two recordings in the series. This is, in a sense, a renewal of the old and delightful custom of "reading aloud" which was integral to the family scene not too long ago.

To delight your class, and at the same time give them worthwhile practice in aural discrimination, we suggest that you play for them "Lochinvar" as read by E. R. Johnson on *FAMOUS POEMS: THAT TELL GREAT STORIES* (Decca DL 9040) in contrast and comparison with the same Tennyson poem as read by Alexander Scourby on *MANY VOICES-II*. Similar treatment may be given to Paul Revere's Ride which is read by Scourby on *MANY VOICES-II* and by Frederic March on *FAMOUS POEMS: THAT TELL GREAT STORIES*. There are nuances of interpretation and delivery in each instance which can be employed to good advantage in instruction.

Both of these recordings have a definite place in instruction in the classroom as well as in school and public library loan and reference collections.

In addition to the two readings already cited the Decca recording includes *GUNGA DIN* (Kipling), *ABOU BEN ADHEM* (Hunt), *INCIDENT OF THE FRENCH CAMP* (Browning), *CHARGE OF THE LIGHT BRIGADE* (Tennyson), *THE BRIDGE OF SIGHS* (Hood), *ANNABEL LEE* (Poe), *MANDALAY* (Kipling). *THE*

*HIGHWAYMAN* (Noyes), *THE CREATION* (Johnson), *MY LAST DUCHESS* (Browning), and *NANCY HANKS* (Benet). The readers are eminent in American theatre, including R. E. Johnson, Alexander Scourby, Frederic March, Arnold Moss and Agnes Moorehead.

Decca has reissued, as part of their growing Treasury of The Spoken Word series, Charles Dickens' *A TALE OF TWO CITIES* and *LOST HORIZON* by James Hilton. These tales can be heard and read by young teenagers with great relish. Certainly the adventures portrayed in the Dickens novel, and the imagination exhibited in the Hilton novel will hold the attention of these young people. Ronald Colman plays the leading role on both sides of this disc (Decca DL 9059), portraying Sidney Carton on the one hand, and Hugh Casey on the other. In the Dickens recording Colman narrates as well as plays the role mentioned. This recording, too, has instructional values, but can be used most effectively for assigned listening to motivate reading of some of the finest available novels. Certainly the introduction to "Shangri-La" can be no more effective, and the portrayal of passions controlling action is part of the French Revolution if it is to be fully understood in class.

### Recordings for Music Teachers

Music teachers will be interested in the new *THE WHIFFENPOOFS OF YALE* recording of close harmony by the thirteen young men who are this well-known singing organization. This is a "one of a kind" recording which may be used well as an example for similarly composed secondary school singing groups. Included in this recording are many old favorites and,

of course, "The Whiffenpoof Song." The selections are taken from original arrangements by the young artists themselves, from the "Yale Song Book" and the "Whiff Blue Book." Information concerning the recording may be had from the producer, Elliott H. Kone, Yale Audio-Visual Center, 53 Sterling Memorial Library, New Haven, Connecticut.

Moving to the other end of the training program, there are many interesting recordings for the youngest school children, but none we think having the promise of the new *RHYTHMS OF NATURE AND CARNIVAL* (Stratco Audiovisual 101C) which has opened new paths for recorded information for these youngest students.

Under the heading, "Rhythms of Nature" the recording embodies nine separate rhythm sections designed especially to elicit specific rhythmic responses within the capabilities of the children. These include clapping, head nodding, arm movements, swaying, trotting, walking, running, hopping and so forth. There is ample room for creative expression and the records are designed, too, to bring forth spoken responses in which the children have an opportunity to recount personal experiences or to indulge in repetition of heard material. The song, "Mr. Weatherman" offers the accented beat necessary for a simple clapping exercise, and at the same time simple words which the children will enjoy learning and singing.

The "Carnival Rhythms" are exciting as the carnival itself. For an easy stride or skipping rhythm there is "To the Carnival" followed by "Calliope" which is a spirited marching rhythm. Children can dance in a circle to the tune, "Merry-Go-Round" as they can use "Ferris Wheel" to practice the sweeping arm movements so necessary with these young people.

The recordings are carefully arranged so that students may be introduced to certain orchestra instruments including the piano, the guitar, the bass viol (both bowed and plucked) and such essential percussion instruments as sticks, blocks, the triangle, rattles or maracas, the xylophone and the already mentioned piano. Indeed in this latter group is the organization of the percussion band so popular with the children.

Not the least of this exceptional instructional "package" are two filmstrips associated with the recording. Each is designed to implement the primary aural impression and to enlarge the area of the child's understanding. They are designed to focus the thoughts and attention and dis-

cussions of the young viewer/listeners on the central theme of rhythm, providing interesting pictures designed to elicit a ready response and to help children develop good habits of observation. The titles of the filmstrips, "Rhythm in Nature" (22 frames, color) and "At the Carnival" (17 frames, color) indicate the close association of the audio and the visual stimuli. This recording, used in conjunction with these filmstrips, can add much to the kindergarten and first grade classes and by their very nature become integral to both instruction and pleasure listening.

#### Directory Additions

We are gratified with the response given our first RECORDING TRADE DIRECTORY (April, 1958) both by the record publishers and the readers of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE. Four publishers sent information too late to be included in earlier copies of the journal. These are: (1) International Pacific Recording Corporation (854 N. Vine Street, Hollywood 38, California) which publishes 15 ips single track tapes, 7.5 ips single and dual track tapes, sells only to dealers and distributors and solicits mail inquiries; label - Omegatape; (2) Magic-Tone

Records (29 Bruce Lane North, Kings Park, Long Island, New York) which publishes discs at 78, 45 and 33.3 rpm, dual and single track tapes at both 75. and 3.75 ips, offers a special educational catalogue of records of interest to schools, sells direct and solicits mail orders and mail inquiries; (3) Pro-Musics Records (900 Lake Shore Drive, Chicago 11, Illinois) which publishes records at 78 and 33.3 rpm, sells direct and to dealers, and solicits mail orders and mail inquiries; label - Pro-Musica; and, (4) Word Records (P. O. Box 1187, Waco, Texas) which publishes educational 33.3 rpm records, sells directly to schools and solicits mail orders and mail inquiries.

#### New Children's Records

EYE GATE HOUSE, INC., Jamaica 35, New York, announced today the impending release of six new 45 rpm hi-fidelity children's records.

All twelve patriotic songs have been composed specially for Eye Gate, and are performed by nationally known recording musicians, and vocalists.

Eye Gate will offer these records through Audio-Visual dealers exclusively. They will not be sold through record stores or music shops. It is planned to make these records available to boys and girls through their respective schools.

The new Eye Gate STORYSONG records will be heard for the first time publicly at the NAVA Convention. Audio-Visual dealers are invited to audition them at Booth F-35, and in the Eye Gate suite in the Morrison.

#### UNICEF Recording

One single LP Hi Neighbor disc contains five songs and dances native to Iraq, Nigeria, Guatemala, Yugoslavia, and the Philippines. Songs are sung in the native tongue and explained in a leaflet that is included, making it a meaningful experience. Music is rendered with native instruments. Dance directions are enclosed as well. "Hi Neighbor" manual (\$1.15). Record (\$3.00 less 20 per cent discount to schools). Make check payable to U. S. Committee for UNICEF, and send to United Nations, New York.

**TECHNIQUES OF MAGNETIC RECORDING**, Joel Tall. 472 pp. The MacMillan Company, 60 Fifth Ave., New York 11. \$7.95. Historical review, simplified theory and a great many applications of various techniques. Especially useful chapter on educational applications makes good use of illustrations and data from well-known commercial and school sources. A practical yet challenging reference work with how-to-do-it emphases.

## Filmstrip Sermons

Under the series title, "Sermons for Young People," Eye Gate House, Inc. (146 Archer Ave., Jamaica 35, N. Y.) has issued 16 original stories photographed in color and given LP-recorded commentaries. To date I have looked over four titles: *An Acted Lie*, *Perspective*, *Getting Even*, and *How Big Is Love*. In the first we have a fine treatment of a difficult subject, which will hold the interest of Juniors and up. In the second a young married couple, after visiting a skyscraper in N. Y. with their minister, get a new slant (perspective) on their tendency to quarrel. This one seemed a bit contrived and disjointed in content, and over the heads of unmarried youth. The second concerns two brothers, of H. S. or college age, who fall into the getting-even stride of living for a spell. This, too, while a "true story," does not "preach" much of a sermon. The last shows two wise and considerate parents preparing two sons, of junior age or close, for the coming of a baby into the family circle. This is well brought off, and has a dual use: for parents, to show them how; for children, to give them perspective on their self-centeredness. In all four the photography runs from good to very good, and the commentaries are splendidly recorded. Comment on other titles later on. (Order direct; \$5.00 per filmstrip, \$3.00 per record; two filmstrips and one record \$12.00; 16 filmstrips and 8 records, \$94.50.)

## Cathedral's New Series

Across the centuries, God has had many heroes. Six of them get their stories told via full-color art filmstrips, with LP recorded commentaries, in Cathedral's new "Heroes for God" series. Here are the six: *Patrick*, *Francis of Assisi*, *Margaret of Scotland*, *Christopher*, *Martin of Tours*, and *Nicholas*. I have previewed the first three and found them good and useful for Juniors and up when in church school, clubs, classes, or in special programs, you wish to present these stories in a form that is attractive and tech-

nically excellent. I am sure the other three have the same general qualities. (From Cathedral Films, Inc., Burbank, Calif., or your dealer; 6 filmstrips, 3 records in cabinet type box, \$33.75.)

## Jundu's Story

Jundu was a lad of darkness — of the African kraal country — who went to the city for light. He found it — in education, and then in a good job, and in the love of a fine girl. Then a new darkness came: a deeper darkness than that of the kraal. It was the darkness of a mind deadened by alcohol and assorted dissipations. Then light came once more, and we see Jundu as an upstanding young man with his feet planted in the path of religious faith and good citizenship.

How did his redemption come about? Through the work of the Pocket Testament League, Inc., (49 Honeck St., Englewood, N. J.) the organization which produced the film and now circulates it on a free-will offering basis. For this reviewer, a finer film could be edited from this one by dropping out the sequences which show Jundu as totally down-and-out. These shots mar for me a good, true, and useful film. There are a few amateurisms in shooting which can be easily overlooked, but the exaggeration of Jundu's loneliness is certainly not essential to his salvation — in my mind.

## New Christmas Film

All week long a Junior girl tries to solve a riddle set before her Sunday School class by the teacher. It has to do with something that you don't have any less of when you give it away; something that may be given right back to you; and something that you don't always deserve — as I remember it! At last she solves the riddle. The answer comes to her in her home, amid Christmas preparations, and it makes the title, *God's Christmas Gift*, mighty fine for this technically beautiful and satisfying film. As with all the titles in Family Film's "Our Children" series, this film has three-way useful-

ness: with the whole family; with children alone; with parents alone. It can be followed by talks, meditations, but best of all, perhaps when parents constitute the audience, by quiet and thoughtful reflection and discussion.

## News Notes

- In October, 1944, the Southern Baptists brought out the first issue of their "Audio-Visual Aids" bulletin. Issue No. 6 of Vol. XV (June 1958) brought news that this useful publication is discontinued. The main reason given is significant, and bespeaks real A-V statesmanship: "In an effort to reach more of our leadership in a way more directly related to each person's needs, the information now carried in AUDIO VISUAL AIDS will be expanded and incorporated in the regular department and organization periodicals, beginning in July." This is a solid recognition of the need for the integration of audio-visual aids into the total program of the church.

- News comes out from the A-V Department of the NCC that the First Executive Consultation and the Fifteenth International Conference on A-V Christian Education to be held at Penn State University, August 15-23, are both securing a good advance registration, especially the 15th Conference. It is possible that a change of date and place has been helpful, and certainly the new-look to the program will be no hindrance to a fine attendance.

- While not available for preview before the deadline for this copy, the two films, made especially to give background for the study themes of the churches this year, are: *Mid-East Profile*, 29-minutes, and, *North American Neighbors*, 27-minutes. Both are in color or B&W and rent for \$12.00 and \$8.00. These two important films will be available to the churches "from denominational film libraries and local audio-visual dealers specializing in religious films." They are released by the Broadcasting and Film Commission, 220 Fifth Ave., New York 1.

## Another A-V Illusion

In a recent survey\* ministers were asked to check the "items of audio-visual equipment NOT OWNED by the church but readily available." Their checking indicated this type of pseudo-availability for quite a lot of film, slide, and filmstrip projectors; and, of tape recorders, record players, and even opaque projectors.

We are grateful for this datum. It is good to have the facts turned up. Let's see what they mean.

On the basis of my experience over more than three decades of constant use of all kinds of visual and audio equipment in local churches, I would call this sort of "availability" an illusion. Being dogmatic on this: If you don't own it: it's not available. Any type of "availability," this side of outright ownership, is an illusion. I have borrowed (and loaned) from friends, from members of the church, from businesses, and from neighboring churches. I know what that means in terms of real availability. Then, there came a time when I quit borrowing short off.

Unless it is there for preview and for study, and for rehearsal, and for early set-up, you do not have real availability. What of advance book-

ing, of conflicts, of last minute changes in plans and of the sudden disappearance of this false availability?

Effective utilization, where the educational juice is squeezed out of audio-visual material in contrast to semi-educational use, requires the ownership of the means of projection. Besides, nothing stimulates usage more than the presence of good equipment which is really readily available.

*\* Report of the Ad Interim Committee on Mass Communications, Presbyterian Church, U. S., April 24, 1958.*

In support of this pseudo-availability of equipment is advanced the old and worn-out "too poor" argument. Poverty, when it comes to the church and such matters as these, is in the mind: not in the pocketbook. Churches afford what they are convinced about. The seat of the trouble is that they are not convinced, as yet, that audio-visual aids are essential.

Why should churches, dedicated to building the Kingdom in the hearts and minds of children and youth, limp along on the availability of other folks' equipment? Do we follow this policy in our homes, in our stores, in our shops, on our farms, in our fac-

tories? We do not! Why, then, in the church?

When it comes to audio-visual equipment of all kinds, if you don't own it, it's not available, and the adequacy of all arrangements short of downright ownership is an illusion. —WSH

## Two Films on Russia

Because of space limitations, reviews (both very favorable) of Julien Bryan's new 30-minute color documentary, **Russia** (released by International Film Foundation, Inc., 1 East 42nd St., N. Y. 17), and **Iron Curtain Lands** (Post-Stalin Period), a Grover-Jennings Production (4516 N. Hermitage Ave., Chicago 40), will run in this Department in September. This much can be said now: Bryan's picture is full of the fine pictorial and informational characteristics which we have come to expect from this competent documentary producer; and, the Grover-Jennings film is a good, useful, and interesting 25-minute color film, by a promising newcomer, out to make a place for itself and likely to succeed. Both are excellent pictorial-holes in the Iron Curtain that a lot of church, college, university, and service club people should peek through this fall and winter.

30 major denominations cooperate through the Broadcasting and Film Commission to bring you powerful, realistic motion pictures produced with professional skill and dramatic talent.

BFC Films are designed for churches to meet specific church needs.

BFC Films MAKE LASTING IMPRESSIONS

**Three Atlantis Film**

By some revisions, Apryl and Her Baby Lamb, has been made even more delightful, interesting and instructive for Kindergarten and Primary children. The music is lovely and the story simple. The implied attitudes are good: cooperation in play; responsibility for pets; and, honesty in returning things found—even a lost lamb. In church and school the creative teacher can use this 13-minute film to delight children and teach them many important things.

**Himalaya: Life On The Roof of The World** is a remarkable documentary film by a producer who knows that an interesting film will always be entertaining; who appreciates the fact that people want to understand what they see; and, who gives a context and background for this understanding. In all, Himalaya is an exciting film, filled with breath-taking shots of terrain and human activity. It is highly recommended for youth and adult groups, in and out of church, who want to visit a little-known part of the world via a competently made color film running close to 30 minutes.

**Tibetan Traders** is a fascinating human film document. Here we see, for 20-some minutes, the spring-time activity of Tibetan tribes as they journey through great mountains, across great rivers, and over impossible trails to come together for their primitive barter-trading each year. This is the kind of film that you want to run immediately a second time—to get a better, longer, and more satisfying look at things so different, unusual, absorbing, and instructive. Highly recommended for youth and adult groups of church, school, and community. It will win general applause for its fine color photography and interesting commentary. (For sale and rental rates, write Atlantis Productions, Inc., 4415 Santa Monica Blvd., Hollywood 22, Calif.)

**What Limits A-V Usage?**

A large group of ministers were asked to rate in the order of importance certain factors which might limit their use of films, filmstrips, slides, recordings and such.\* Here is the way their checking stacked up:

	<i>Times checked</i>
<i>The Factor</i>	
1. Rental cost	600
2. Purchase cost	143
3. Leaders don't understand how to use	127
4. Inadequate equipment	103
5. Leaders don't know what's available	103

6. Unsatisfactory distribution system 58
7. Can't get materials when wanted 39
8. Local church program too full 36
9. Don't know where to order 10

In what order would you rate these factors—minister, director, A-V coordinator, library operator, equipment salesman, church school superintendent, A-V producer, and equipment manufacturer? Whatever the real factors limiting usage by these churches, these are the ones which their leaders thought were real. As a churchman, I am very suspicious of the rank of both No. 1 and No. 2, and venture that they are 40% fact and 60% plain rationalization and lack of real interest. Or, could I be wrong?—WSH

\* From Report of the Ad Interim Committee on Mass Communications, Presbyterian Church U. S., April 24, 1958.

**Drug and Alcohol Films**

**H(eroin): The Story of A Teenage Drug Addict**, 22-minutes, is strictly for adults; for community groups and leaders to alert them to danger of addiction among young people.

**None For The Road**; 15-minutes; for high school and college youth; dramatic presentation in which some teenagers drink and others do not. Recommended for fellowship groups, and to the leaders and teachers of youth, when used wisely.

**What About Drinking**; 11-minutes; discussion of pros and cons of drinking by teen-age group; useful as background for discussion by church group, if used carefully under adult guidance.

(From McGraw Hill, Film-Text Dept., 330 West 42nd St., N. Y. 36; write for rental and prices.)

**Love and Marriage**

They do go together, if we understand aright three films of usefulness to young people, their leaders in church and school, and especially their parents. Is This Love hold up to the light of rational discussion teen-age affection and attraction; **When Shall I Marry** seeks a sensible answer based on solid considerations; and, **How Much Affection** highlights seriously this important question all young people must ask and answer for themselves. Not seeking to put over "answers" to these questions, these films outline the main pros and cons in way to provoke discussion by the group, the leader of which should have balanced and mature judgment plus a lot of tact and skill in leading discussions. (About 20 minutes each; McGraw Hill; New York 36.)

# New Filmstrips

Described and evaluated by **ROBERT CHURCH, WALTER PILDITCH, and HAROLD WARD.** Producers should send review copies of filmstrips to **Robert Church, Audio-Visual Coordinator, Herman Felsenthal School, 4101 S. Calumet Ave., Chicago 15, Illinois.**

## CURRENT AFFAIRS SERIES

Current Affairs Films. 527 Madison Avenue, New York 22, New York. Filmstrips are in black and white. Grade range—High School and Adult. Subject area—Current Events and individual subject noted. These filmstrips are produced with co-operation of various newspapers located throughout the country.

**THE TRANSPORTATION REVOLUTION** (41 Frames). This filmstrip does a very fine job of contrasting modes of industrial transportation in the 1920's and today. It could well be used to introduce a unit on transportation in a senior high school or adult course planning to make a detailed study. It would be very good summary material in any unit on transportation from junior high school level and up.

A discussion and picture guide accompanies this filmstrip and the pictures were judged to be of excellent quality. The filmstrip would be outstandingly meaningful to its designated grade level group and the linguistic level is excellent for the grade level intended. The filmstrip contains very enriching material and it both raises and answers questions. Overall rating given the filmstrip is excellent.

**WATER RESOURCES—AMERICA FACES A NEW PROBLEM** (37 Frames). This filmstrip contains much information to supplement a unit stressing the need for conserving water and using it wisely. It very adequately presents the problems of water shortage and suggests way of solving these problems.

This filmstrip was provided with a good discussion and picture guide and would be very meaningful for persons of the above grade level group. The pictures were of excellent quality with excellent linguistic accomplishments well within the grade level. The filmstrip would be very enriching as it

both raises and answers questions. Intended for use as supplementary subject matter, the overall rating was excellent.

**OUTER SPACE—THE NEW FRONTIER** (38 Frames). This filmstrip presents the subject of explorations in outer space in a very interesting and meaningful manner. It is well suited to introduce science units on rockets or current event lessons on outer space.

The pictures in this filmstrip were judged to be of exceptional quality and the story is excellently told through pictures. The captions were excellent for the intended grade level and the publisher's guide for discussion with pictures would be of great help for the teacher. This filmstrip would be very enriching for a class viewing it and it both raises and answers questions. The overall rating given it was outstanding.

## ARITHMETIC SERIES

Society for Visual Education, Inc., 1345 Diversey Parkway, Chicago 14, Illinois. Filmstrips are in color. Grade range includes upper grades—seventh and eighth grade. Subject area is mathematics. Teaching guide furnished. Cost of individual filmstrip is \$6.00; entire series is \$39.50.

### USING AND UNDERSTANDING NUMBERS SERIES

1. **INSURANCE** (57 Frames).
2. **STATE AND LOCAL TAXES** (52 Frames).
3. **FEDERAL TAXES** (47 Frames).
4. **MEANING AND UNDERSTANDING OF PER CENT, PERCENTAGE** (41 Frames).
5. **BUYING AND SELLING, Applications of Per Cent** (46 Frames).
6. **COMMISSION, Meaning and Application** (48 Frames).
7. **INTEREST, Borrowing and Investing** (59 Frames).

This series of filmstrips has a wealth of practical applications of percentage problems. The quality as well as the continuity of the illustrations provide learning situations which will make percentage interesting and meaningful. Each filmstrip contains a listing of concepts to be developed, utilization suggestions, and a vocabulary guide. Throughout the strips are illustrated problems pertaining to such subjects as income tax, automobile insurance, interest on savings, tax rates, profits, etc. The class can work these problems together. Additional problems or questions are found at the end of the strips to summarize or review the

### Color Filmstrip Service for Educational Producers

A scene in the Manhattan Color Lab filmstrip on "Robinson Crusoe," processed for Dr. William Lewin's series of Photoplay Filmstrips.

Let us do all or part of the work you require in color processing. No order too small or too large for our special educational department.

**Manhattan Color Laboratory**

210 W. 65th St., New York 23

material covered. The filmstrips in this series would be excellent to introduce or supplement the various phases of percentage. This series is highly recommended to any teacher who is interested in creating interest and understanding in per cent and percentage.

The pictures were judged of exceptional quality with very meaningful captions for the grades intended. The filmstrip material is very enriching and outstandingly done. The strips both raise and answer questions and may be used before a unit for introducing it as new material or for supplementary information during a teaching unit. The overall rating given was outstanding.

### SOCIAL STUDIES SERIES

Visual Education Consultants, Inc., 2066 Helena Street, Madison 4, Wisconsin. Filmstrips are in black and white. Grade range includes intermediate and upper grades. Subject areas include geography, history and social studies. Supplementary teaching guides are furnished. Cost of each individual filmstrip is \$3.50.

**A VISIT TO WEST GERMANY** (35 Frames). Current information on West Germany is presented with a story of the land and the people who live there. Pictures show characteristics of the country along with farms, churches, schools, and other features of the area. Similarities in appearance and customs to those in the United States are made apparent in many of the photographs. This up-to-date strip would be excellent for providing supplementary pictorial information concerning present-day West Germany.

The pictures were judged of average quality with acceptable captions for the grade level intended. The publisher's teaching guide was adequate as the filmstrip both asked and answered questions in its presentation. It was judged to be enriching for the average classroom and could be used as supplementary material or for a summary of material already taught. Overall rating is excellent.

**BALTIMORE** (26 Frames). Pictures taken in and about the City of Baltimore show many places of historic and national interest. The port and industrial importance of the city are emphasized. There is a picture of Fort McHenry where Francis Scott Key wrote our national anthem. Many such photographs are incorporated into this strip to help make it a useful teaching aid for any lesson concerning the City of Baltimore.

The story of the filmstrip was excel-

lently told through the use of pictures of excellent quality. The captions were very meaningful and within the linguistic attainments of the intended grade level. The filmstrip would be enriching for the classroom and mainly answered questions. The publisher's guide included a vocabulary lesson, quiz questions, and related activities for the classroom. Overall rating is excellent.

**WHAT IS THE JUNGLE?** (44 Frames). The filmstrip gives a good description of the jungle. It would be good supplementary material after the motivation has been accomplished. It suggests many topics which could be the basis for extended research.

The story of the filmstrip was excellently told with excellent quality pictures. The filmstrip would be very meaningful to the intended grade group and the reading material within the linguistic attainments of that group. The publisher's guide was judged outstanding and the filmstrip enriching by both asking and answering questions. The overall rating was judged to be excellent.

**THE GROWTH OF A HARBOR** (37 Frames). This filmstrip would make a good motivating device. The changes in water transportation are excellently shown. It would be of particular interest to persons of the area of Lake Michigan since the story concerns the growth of Milwaukee, Wisconsin.

The story of this filmstrip was told with excellent pictures and judged to be of very meaningful value to the grade group for which it was produced. The captions were outstanding and the teaching guide good. Being primarily induction type material it both raised and answered questions. The overall rating given was excellent.

**A TELEPHONE STORY** (35 Frames). From Alexander Graham Bell to the present day, the story of the telephone and its development is

# Looking for Something New?

HERE IS YOUR **KEY TO THE**  
AUDIO-VISUAL RELEASES OF 1957-1958

## The **BLUE BOOK** of Audio-Visual Materials

Combined with this August issue of Educational Screen & Audio-Visual Guide

- **films**
- **slides**
- **filmstrips**
- **recordings**

the **ONLY** source-book that completely correlates  
all four principal types of instructional materials

**Costs Only \$1.00**

Not only does the BLUE BOOK tell you where to get 16mm films; it also tells you *where to get 35mm filmstrips, slide sets, and educational recordings.*

The new BLUE BOOK lists all these major types of teaching aids under the same subject heads. The listings include: title, type of material, length, silent or sound, color or black and white, television clearance, sale and/or rental price, primary source of distribution, release date, content description, and recommended age level.

The BLUE BOOK lists materials on virtually all subjects — agriculture, armed forces, arts and crafts, cinema arts, education, entertainment features in many languages, personal and vocational guidance, health and safety, home economics, industry, transportation, industrial arts, languages and language arts, literature and drama, mental health, mathematics, science (physical, biological, general, medical and allied), physical education and sports, social studies (geography,

history, anthropology, government, social problems) and many more. No matter what your field of interest, the help you're looking for is in the BLUE BOOK.

For more than 30 years the BLUE BOOK has been the desk-top reference and work-book of leading audio-visual education administrators. Its first 28 editions, revised annually, were cumulative, those following list only the new releases of their year. This year, again, the Blue Book issue lists, classifies and indexes the new offerings released during the past academic year. Every subscriber gets the BLUE BOOK — and a great many extra copies are sold for all-year reference use in film and other libraries. A-V administration offices, research and production centers, in short — everywhere that accurate release data is needed quickly, handily, constantly! *This makes the annual BLUE BOOK issue a doubly useful one for our subscribers — and, consequently, for our ADVERTISERS.*

### An Ideal Combination

To keep your BLUE BOOK up-to-date, each monthly issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE now carries a special section of listings of new audio-visual materials presented in the same helpful format as in the BLUE BOOK. A year's subscription to the magazine costs \$4.00; the annual BLUE BOOK issue costs \$1 each; and the 28th (separate cumulative book) edition that makes your file complete is priced at \$2.00.

## Looking at the Literature

**LEARNING FROM FILMS** by Mark A. May and Arthur A. Lumsdaine. Yale University Press, 1958. 357 pp. \$5.00.

This book is highly recommended to all graduate students contemplating doctoral studies of the use of films in education. Those who are having difficulty in choosing and isolating a research problem will find many suggestions here. Candidates with topics already selected will use the book in their reviews of related research. They also will be well advised to heed the warnings of hazards in experimental design. One of the values of the book is its candor about what worked and what did not, and intelligent discussion of possible reasons and alternatives.

*Learning from Films* is the directors' report on the Yale Motion Picture Research Project, an eight year program supported by the entertainment motion picture industry. Started in 1946 with a grant from the Motion Picture Association of America, the project was continued until 1954 by funds from Teaching Film Custodians, an independent affiliate of the MPAA. Many, but not all, of the films used in the project were excerpted or produced by TFC.

Part I of the report describes a group of experimental studies of the acquisition of knowledge from films as measured by test scores. Audience variables were grade level and previous instruction on the topic. Some of the film variables were pictorial quality and color, live dialogue and off-stage narration, readability of the commentary, inserted questions, and patterns of words and pictures. Content analysis and test construction for two films, *Osmosis* and *Seasons*, are discussed both in Part I and the two appendices.

Part II contains reports on another educational potential of films, their motivational or enrichment effects on subsequent learning. Evidence was gathered on activities such as reading the book on which a film was based, improvement in reading comprehension, participation in class discussions, and changes in attitudes and interests. Some of the results were meager, and some were more suggestive than definite, but all of the problems are interesting and worthy of further investigation.

Part III is concerned with techniques for evaluating instructional films, and the method called "road testing" is one of the most promising developments from the project. The results of road tests are outcomes of classroom experience, less precise than the find-

presented with interesting facts to emphasize the importance of this means of communication. Useful as supplementary material for a unit of study, the pictures are of good quality and help make the contrasts of present-day telephone operations with early development meaningful.

The filmstrip was judged of average quality for use with the intended grade level. The captions were judged outstanding and acceptably meaningful for the linguistic attainments of the intermediate and upper grades. The filmstrip was somewhat enriching and intended for use as supplementary material which mainly answers questions. Overall rating given this filmstrip—good.

## HANDWRITING SERIES

Charles Scribner's Sons, Inc., 597 Fifth Avenue, New York 17, New York. Filmstrips are in color. Grade range includes second grade. Subject area includes language arts with emphasis on handwriting. A teaching guide is provided for use with series. The entire series was reviewed as a whole.

**MANUSCRIPT BASIC HANDWRITING—BOOK TWO SERIES:**

1. FORWARD SLANT—One Guide Line and Review of Letter Forms, Forms (24 Frames).
2. REVIEW AND NEW FORMS—Numbers and Tests of Good Writing (22 Frames).
3. REVIEW OF CAPITALS—Periods and Question Marks (23 Frames).
4. PREPARATION FOR JOINING—Drills for Rhythm (22 Frames).
5. FIRST REAL JOININGS—Upper Joinings (23 Frames).
6. SECOND JOINING STROKE—The Short Retrace—Reviews and Test (23 Frames).

This series of filmstrips presents manuscript writing in a very meaningful way to the student. It would be a very good aid to the change from manuscript to cursive writing. The developmental sequence is good. It is based on the Stone and Smalley method of handwriting.

The pictures were of excellent quality in all filmstrips of this series. The telling of the story through pictures was outstandingly done. These filmstrips would be very meaningful to a lower grade group and the teaching guide furnished is excellent. The material is very enriching while it both asks and answers questions. Being intended to introduce new materials for the student, the overall rating given was excellent.

ings of controlled experiments, but broader and more objective than any preview ratings.

Part IV discusses the use and potential of teaching films, and is based largely on the conditions and practice of audio visual education in Connecticut public schools. The investigation supports the belief that it is the better teachers (by various standards of judgment) who use a variety of instructional materials and the largest numbers of motion pictures and filmstrips. Further, teachers used more films if their school had an AV coordinator or the system an AV director, and the town had a film library.

The report concludes with a discussion of some of its implications for mass instruction. Recommendations to producers are for clear visualization adapted to pupil level of prerequisite information, verbal clarification of visuals, simple language, and enhancement of pictorial cue and overt response factors. Recommendations to school administrators are to use educational films in assembly halls or in classrooms, with or without supplementary instruction, and to develop a program that will realize the full potential of audio visual education.

## News in the Trade

### IDEAL APPOINTS NEW MANAGER

Mr. Thomas S. Roberts has been appointed manager of the Chicago branch office for Ideal Pictures, Inc., it was announced by Paul Foght, president. This is in addition to Mr. Roberts' position as president of Midwest Visual Equipment Company, Mr. Foght said.

Mr. Roberts brings to Ideal more than 23 years experience in the audio-visual business. After he was graduated from Lake Forest College, he was employed by Bell & Howell Company. Three years later he formed his own company selling and servicing audio-visual equipment and visual aids.

He is a member of the National Audio Visual Association, and an officer of the National Rental Projection Service.

### NEW T-V PREDICTION

Phillip L. Gundy, president of Ampex Audio, Inc., in a talk before the Magnetic Recording Industry Association in Chicago immediately following the big Electronics Parts Show, predicted that it would not be long before home and school TV receivers will be projecting taped picture and sound, including color TV, right on their own sets, at any time their needs require.

He demonstrated the new Ampex Universal "A" (900 series) 4-track stereo recorder which, at 3¾ ips, increases the conventional 48 minutes capacity of an 1800 foot reel of tape to 3 hr. 12 min. of stereophonic recording. New Ampex 900's include the 4-track head at no increase in price; those in use now may

have the new dual stereo head installed by local Ampex servicemen. Ampex consoles are designed to play stereo records, as well as 4-track, 2-track stereo and monaural tape.

Nat Welch, general chairman, and Edward A. Altschuler, executive secretary, were the speakers at a breakfast session; the rest of the morning being split between merchandising and advertising discussions. Recorders and tape may reach the consumer today through some 8,400 music stores; 55,000 drug stores; 3,000 out of 10,000 camera stores; and 1000 AV specialist dealers who serve education and industry, each group serving a distinct and separate function in the distribution pattern. The "case" for each was championed by a qualified representative. For the AV dealer Martin Mendro stated bluntly that unless the recorder and tape makers developed special models, services, and distribution channels for education and industry, they would surely fail to realize the full potential of these markets.

### MPI ANNOUNCEMENT

The Motion Picture Industry Credit Group announce the re-election of J. A. Tanney, President of S.O.S. Cinema Supply Corp., as Chairman and Kern Moyses of Peerless Laboratories as Vice-Chairman to serve another year. The group is affiliated with the National Association of Credit Management, having offices in all principal cities.

The Executive Committee consists of Jack Fellers, Duart Film Labs Inc.; Walter Lynch, Mecca Film Labs Inc., and Everett Miller, RCA Film Recording Studios.

Chartered on April 1, 1953, the Motion Picture Industry Credit Group is

## IN VISUAL PRESENTATIONS

MAKE A  
BETTER  
SHOWING

with

**OPTIVOX**

PORTABLE EASEL

The newest thing for visual aid is this lightweight, portable **Optivox** easel. 29" x 39½" steel board finished in "rite-on" green, adaptable for chalk, charts, or magnets. Aluminum legs fold to convert from 70" floor easel to table model. Net weight, 17 lbs. Comes with eraser, crayons, chalk, pointer, and removable chalk tray. **Only \$44.95**. Carrying case and lamp fixture are extra equipment.

### and PIXMOBILE PROJECTION TABLE

...lets you prepare your presentation in advance, roll it in, and use it when you're ready. Sponge rubber top, 4" swivel wheels, with brakes that hold on incline. Vibrationless. Several models and heights. **42" table only \$32.95**

**WRITE FOR LITERATURE AND DEALER'S NAME. SOME DEALER TERRITORIES STILL OPEN. WRITE...**

**THE ADVANCE FURNACE CO.**  
2310 EAST DOUGLAS WICHITA, KANSAS

composed of the leading motion picture processors, export dealers, suppliers, service and financial organizations in metropolitan New York, Washington, D.C. and Chicago, covering the entire Atlantic Seaboard and Middle West. Meetings are held monthly where credit experience and industry practices are discussed. A weekly Flash Report is issued concerning emergencies, lawsuits, ownership changes, accounts placed for collection and other financial information.

**CORONET OFFERS TEACHER EDUCATION FILMS AT LOW COST**

Coronet Films announces a revolutionary new cooperative plan to make a selected group of fifty films available at extremely low cost to teacher-education institutions. These fifty films, valued at more than \$3,000, will be deposited with a college or university for one year at a cost of only \$250. The films may be used without limit in teacher education courses and in practice teaching, but may not be offered for rental.

Leading institutions have taken advantage of the plan and many more are expected to participate: The only requirements participating institutions must fulfill are to keep the films in proper condition, encourage their use, and report teacher and pupil reactions to Coronet.

The fifty films are divided into four basic units: "Teacher-Education," including a new series of three films on **Education in America**, and **Audio Visual Materials in Teaching**; eight films which show good "Teacher-Student Relationships in Counseling Situations"; 23 films including "Classroom Situations for Method Analysis"; and fifteen "Outstanding Subject-Area Films."

Inquiries concerning the Coronet program to provide "Films for "Teacher-Education" should be directed to Coronet Films, Coronet Building, Chicago 1, Ill.

**COLBURN CONFERS AWARD**

John Weigel, dean of Chicago motion picture narrators, received an award of merit plaque from the Geo. W. Colburn Laboratory in recognition of his contributions to the 16mm motion picture industry.

For over two decades his performances as a narrator and actor have established and maintained a standard of excellence that has contributed greatly to the growth and quality of 16mm industrial and commercial films.

The presentation was made by Clyde Ruppert, Director of Producers Services.

**NEW SOUND, TV, AND SAFETY SYSTEM FOR SCHOOLS**

An all-new communication, signaling, safety, and teaching system was exhibited in Chicago recently by the manufacturer, DuKane Corporation, St. Charles, Ill.

Through the use of an ingenious electronic network which combines into one system the functions of a public address system, emergency alarms, fire sensing and detection equipment, telephone-intercoms, clocks and class-break signals, and closed-circuit TV, the manufacturer claims greater efficiency and educational effectiveness at far lower cost than previously possible.

DuKane engineers emphasized that the system is not a "dream system" for some time in the future, but is ready for installation now in schools anywhere in the U. S. Or, parts of the system can be installed with provision made for future installation of the remaining features, with greater savings in overall cost.

# Check these 10 points in selecting 16 mm sound projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full sound track.
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level surface, even the floor.
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

## ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

# HI-FI PROJECTION

WITH  *Viewlex* "V-500"

*As new in design — as modern in concept as the new ranch type schools!*

**\$109<sup>50</sup>**  
INCL. CASE.

The PROJECTOR that has all of TOMORROW'S FEATURES TO-DAY...

A combination 35mm filmstrip and 2 x 2 slide Projector — 500-Watt Fan cooled

## 4 WAYS EXCLUSIVE

- ① **Completely LIGHT TIGHT lamp house**  
Not a ray of light can escape. The exclusive Viewlex Light-Multiplier optical system provides more effective illumination than ever before possible.
- ② **Vertical FAN MOUNTING behind lamp**  
For the first time cold air is drawn FIRST over the film plane, then past the condensers against the lamp and then immediately forced out the side grills.
- ③ **AUTOMATIC take-up reel**  
No more threading. Completely automatic take-up accepts film from projector channel and automatically winds it neatly.
- ④ **Built-in OPTICAL ENLARGING Pointer**  
It's more than a painter. Emphasizes by enlarging the area you want even larger than the projected image. Fixes attention on details under discussion.

### And there's MORE!

NEW Simplified Threading. One turn click stop for single and double frame — vertical and horizontal. All aluminum castings. F/2.8, 3, 5, 7, 9 and 11-inch lenses available. Guaranteed for a Lifetime.

Other VIEWLEX Projectors from 150 to 1000 Watts

Priced from \$39.25 to \$238.50

# It's **EMDE** for the Best in SLIDE BINDING MATERIALS

## **EMDE** MOUNTS FOR 2 X 2 READYMOUNTS

Employs one-piece aluminum frame and ultra-thin micro glass for mounting transparencies in Eastman standard Readymounts. Films are not removed from Readymounts. Sandwiched between the glass sheets, Readymounts are simply inserted into aluminum frame, and frame end folded over—and slide is finished. Frame is standard size and thickness—fits any projector or viewer.

No. 20 (20 frames and 40 glass).....Per Box \$2.00  
No. 202 (100 frames and 200 glass).....Per Box \$8.00

## **EMDE** 2 X 2 ALUMINUM FRAME & 35MM D. F. FOIL MASK

New double-fold aluminum mask and one-piece 2x2 frame is designed to meet most exacting demands of color film users who desire ease of assembly and all possible protection against Newton Rings, film bucking, moisture, fungus, etc. All metal and glass attracts utmost minimum of moisture—the real cause of steaming and fogging of slides.

No. 35-D (20 frames, 20 masks and 40 glass).....\$2.00  
No. 135-D (100 frames, 100 masks and 200 glass)...\$8.00

## **EMDE** 2 X 2 FRAME AND MASK FOR SUPER-SLIDE & 127 COLOR FILM

New aluminum foil mask accommodates either Super-Slide films cut down from 2 1/4" square films (Rollei size), or new 127 color film. The 2 1/4" square film is merely cut to exact size of double fold mask, placed in folded mask between glass, and inserted in familiar Emde 2x2 aluminum binder. The 127 film is slightly smaller than folded mask, so film is merely taped to one or two edges of mask before folding.

No. 127-SS (20 frames, 20 masks & 40 glass).....\$2.00  
(100 frames, 100 masks & 200 glass).....\$8.00

## **EMDE** 2 3/4 X 2 3/4 ALUMINUM FRAME & 2 1/4 X 2 1/4 ALUMINUM FOIL MASK

For 120 and 620 film used in ever-popular reflex cameras. This binder offers a new idea in binders of this size by providing aluminum foil double fold mask to eliminate direct contact of film and glass. It is designed to meet the most exacting demands of color film users who desire ease of assembly. This all metal and glass binder provides utmost protection against Newton Rings, film bucking, moisture, fungus, etc.

No. 12 (12 frames, 12 masks, 24 glass & data labels) . \$1.75  
No. 50 (50 frames, 50 masks, 100 glass & data labels) . \$6.95

# Leadership

IN "MOST USED" EDUCATIONAL FILMS\*

● Encyclopaedia Britannica Films once again demonstrates its leadership in the field of audio-visual education by producing *eight* among the ten most widely used teaching films — \*as determined by the latest survey of its membership conducted by the Educational Film Library Association.

Through its research and production departments, EBF continues to build into every motion picture, as in the new titles below, the authenticity and the teaching effectiveness that over the years have given EBFilms first place in the classroom.

**\*PUSS IN BOOTS** — 16 minutes. Black and white. The well-known fairy tale is retold with animated puppets. *Primary and Middle grades.* No. 1617.

**\*MOTHER CAT AND HER BABY SKUNKS** — 11 minutes. Color. A mother cat adopts some orphaned baby skunks. *Nursery school, kindergarten, and primary grades classes in language arts and nature study. Excellent applications for social studies units on family living.* No. 1598.

**\*LEARNING ABOUT LEAVES** — 11 minutes. Color. Demonstrates how leaves are important to plants, animals and man through time-lapse photography, animation and skillful close-ups. *Middle grades.* No. 1624.

**\*CHILDREN IN AUTUMN** — 11 minutes. Color. Two children observe the signs of autumn. *Primary grades.* No. 1604.

**\*ROY: Sheepdog of the Scottish Highlands** — 18 minutes. Color. The story of young Jamie's faith in a sheepdog named Roy and how he enters his dog in the national sheepdog trials. *Primary and Middle grades language arts and social studies.* No. 1672.

**\*CHILDREN OF SCOTLAND** — 15 minutes. Color. Latest addition to EBF's Series "Children of Many Lands." The children of a Scottish fishing village. *Primary and Middle grades in geography, reading, and language arts.* No. 1677.

# KNOWING WHAT'S AVAILABLE

With the publication of this August 1958 BLUE BOOK ISSUE of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE, the magazine becomes an around-the-calendar, throughout-the-year publication. For the first time we have published twelve full issues in a year. It is a symbol of the reality that now the use of audiovisual materials in schools and in other educational programs is a full-time, twelve-month responsibility.

For the past two years the BLUE BOOK ISSUE of SCREEN has been published in December. There seemed good and logical reason for publishing it then as a kind of year end summary. But we have come to the conclusion that this BLUE BOOK service to our readers will become far more functional and valuable if published just preceding the beginning of a new school year. It is thus a summary and reference tool that can then be used at the beginning and throughout the entire school year.

## Complete Year Round Coverage

In this issue we have attempted to list all the audiovisual materials produced during the previous year between June 1 and May 30. This sets the pattern for the future, too. Each August issue, hereafter, will provide a listing of the new audiovisual productions of the previous year. Each succeeding monthly issue will list the new productions for that month. Through this continuous thorough coverage and service SCREEN makes a major contribution toward keeping audiovisual materials users informed of what is available.

Knowing what's available is the first essential step in making good use of audiovisual materials. How could a teacher possibly use a film if he didn't know it exists? We recall an audiovisual director who made a detailed study of the way materials were being used in his school system. (He was really trying to develop evidence to prove to others what he was sure about, that his administration of the audiovisual program was just about perfect!) One of the startling things he discovered was that twenty-one per cent of the teachers studied didn't know what materials were available for their use. He thought he had told them by publishing a single bulletin. You can be sure that he proceeded to remedy that situation. You can be sure, too, that readers of SCREEN, with its new and more complete 'round-the-calendar listings of audiovisual materials, will have no difficulty in keeping informed about the materials that are being produced for their use.

## Inter-related Listings of All Materials

One of the unique and valuable features of SCREEN's listings is that all kinds of audiovisual materials are listed under each of the many subject matter classifications. This is done for good and sound reasons. It provides a listing based upon best instructional practice. Teachers who are making best use of audiovisual materials are not concerned with one audiovisual medium only. Good teachers do not get stuck on one layer of Dale's "Cone of Experience." Good teachers must constantly strive to provide for their pupils a wide range of learning experiences. They must make use of a wide variety of audiovisual materials in their teaching.

Dr. Mendel Sherman and others on "Ole" Larson's staff at Indiana University have recently been talking about the "cross media" approach to learning. As we understand it, this is another approach to the fundamental idea that the inter-related use of many materials of instruction is basic to best instruction. It is not enough just to use a motion picture to provide a background for reading, or to show a single picture to illustrate a point. But when a motion picture is used, and a filmstrip, and a related recording—and if all of these rich, concrete experiences are provided for pupils at the right time, and are presented in the right way with due consideration of the relationships of the materials to one another, then meaningful and memorable learning results.

Good audiovisual directors, if they are to serve their teachers well, likewise cannot be concerned with but a single medium. They must be concerned with the same wide variety of audiovisual materials that good teachers need. The way that materials are listed in SCREEN recognizes this concern for the inter-relatedness of audiovisual materials. The important thing is not whether the new "Story of Abraham Lincoln" is a motion picture, or a recording, or a filmstrip. But it is important to know the facts about the new production and its relationship to other materials on the subject. Then the evaluation of this and other related materials will determine which ones, and which combinations, will most likely meet the instructional needs.

### An American History Preview

Earlier this summer we had the worthwhile and illuminating experience of working with a committee of teachers selecting audiovisual materials for American History instruction. Motion pictures, filmstrips, and

recordings were reviewed, and for the most part they were reviewed in the sequence in which they would probably be used in the classroom. They were also reviewed within the context of other instructional materials that were already available, the textbooks, maps, charts and other audiovisual materials. The wide variety and excellence of the materials available today for the teaching of American History provide teachers with unprecedented opportunity for making history more real and comprehensible than ever before. And we're sure that this is equally true of other areas of today's curriculum.

With new and better materials being produced all the time for all subject matter areas there is constant challenge in the selection of best materials to meet local teaching needs. One observation about the newer motion pictures available for American History was the remarkable contrast with the pictures available eight or ten years ago. Then, practically the only films available (and there weren't too many of them) were the edited versions of theatrical productions. Today there are almost countless films produced by experienced educational film producers covering a range from the early explorers to Sherman Adams. And in addition there are many excellent teaching films available that are the by-product of television, such as the "You Are There" series. With this constantly increasing wealth of materials, the task of knowing what is available and then evaluating and selecting the best from these materials is becoming increasingly complex. You need all the help you can get.

### A Reference Tool

So, this issue of EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE has been designed to help you in solving your problems in locating the best audiovisual materials available for today's teaching. It brings together the past year's productions in all subject matter areas and at all grade levels. The annotations will help you to know what the materials are about and to make up your mind which materials you will want to review to round out your own collection of instructional materials. This issue is a reference tool that you will want to keep on hand to use continually, whenever additional funds are ready for the purchase of materials, and whenever inquiring teachers find new instructional needs for new and better materials.

# San Francisco's Audio Visual Materials Card Catalog

As a result of three and a half years of research and production in the Department of Audio Visual Education, The San Francisco Unified School District, each public school in the system has received its own 15 drawer Audio Visual Materials Card Catalog. For curriculum reasons applicable to our system we have found it advisable to furnish each school, elementary, secondary or special, with a complete listing of our materials rather than a specialized or limited catalog of materials for a particular grade, subject, or level. The catalog is an alphabetical index by title and subject, with up to as many as four cross filings if necessary.

It became obvious that our communication with administrators and teachers in the form of printed or mimeographed audio visual catalogs was unsatisfactory. The volume of materials held by the department made it impossible to re-issue a practical and complete mimeographed catalog each year, therefore a series of colored "supplements" were initiated. The result was the original catalog plus a stratification of seven supplements and reaching a thickness of five inches. Everything we held was in the catalog, alright, but very difficult to find. It not only became physically unmanageable but like all yearly issued items it was well out dated before reaching the teacher. The situation was certainly not promoting the use of the excellent audio visual materials in the department. Something had to be done and we were given the strong support and encouragement of our Superintendent, Dr. Harold Spears, and his staff.

As a library of instructional materials we concluded it would be best to employ basic library techniques and provide card catalogs to replace the mimeographed units. This was not a hasty decision and was reached from the over-all standpoint of long-range economy of operation, improved efficiency, as well as professional effectiveness. Our approach was based on a desire to use the general, and familiar, format of the library card catalog, but to adapt this tool to fit audio visual materials, our curriculum, and the specific departmental organization of the San Francisco schools.

Within our own Department of Audio Visual Education, Miss Bess Landfear, Research Librarian, guided the project. We pooled all related

experience and information we could gather from institutions, business and industry on cataloging, modifying and adapting those ideas we wished to incorporate in our audio visual materials card catalog. Teachers and administrators in San Francisco received word of the card catalog with both relief and enthusiasm and made many excellent practical suggestions during its development. We capitalized on teacher interest and kept them informed regarding our progress by means of departmental memoranda as well as progress notes in the Superintendent's Bulletin.

In terms of production we found it absolutely necessary to produce our own cards. We use a Multilith Model 1250 which is used for other Central Office projects, but the audio visual card catalog initiated its purchase. It has proved a versatile machine, and by using Multilith card masters we are able to obtain excellent results. The machine must be operated by a trained operator, but the card masters can be produced by any typist familiar with typing cards. Using an electric typewriter produces a much more even card master than manually. Our running card stock is cream white in color and 100% rag content. Incidentally, card stock color will vary slightly on different factory lots, even from the same manufacturer.

For housing we use a 15 drawer standard library unit, such as produced by Remington Rand; one of which was obtained for each of the 132 schools in the district. Fastened to the cabinet top is a 4"x4" adhesive aluminum plate which gives the key to the catalog's "color-keying" as well as grade level symbols.

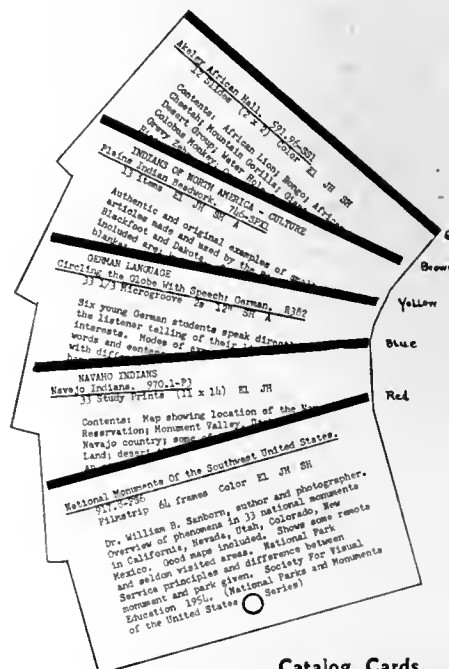

Our standard run on each individual card is 200, giving us one each for the 132 production catalogs and the remainder as a cushion for growth, loss and replacement. As cards are run off they are sorted into a special cabinet containing pigeon holes for each school. Every two months the cabinet is emptied and a packet of new cards sent to each school, thereby keeping them up-to-date and posted on additions in the department. A special bulletin on *How To File Your Audio Visual Materials Card Catalog* was prepared by the staff under Miss Land-

fear's direction; it is simple, easy to follow and has met with favor. Adding new cards in the school *has not* proved a problem.

Now for a few points regarding attributes of this catalog. Many of these factors are obvious but perhaps you can find an item or two that you can modify and use in your own program.

The catalog includes all of the various types of instructional aids and materials held by the department which serves all levels and schools of the District.

One of the most unique aspects is its color-keying. Each card is banded across the top with a 1/8" colored band designating what type of material it represents. For example; a red band is for filmstrips, blue for study prints, yellow for recordings, brown for exhibit, specimen and realia materials, green for slides, and pure white for motion pictures. Not only does this make a very attractive catalog, but actually makes an audio visual teaching aid out of the audio visual materials catalog itself. At a glance it dramatically points up that there is much more to audio visual education than just motion pictures! It is also of considerable value in helping teachers lo-

by  
**William B. Sanborn, Ed.D.**

**Supervisor, Audio Visual Education,  
San Francisco Unified School District**

cate quickly a particular type of subject material without first having to read all of the card data. The color-keying is also of value to us in terms of indicating strong and weak holdings in terms of amount of coverage.

Appearing on each title and subject card is an objective, descriptive and critical note regarding the material. These notations have been prepared by our own teaching and administrative staff in the District under the constant all-year previewing program administered by our Department. All card copy is reviewed and edited by this supervisor and Miss Landfear. The cards note, briefly, the subject matter coverage and a comment indicating the grade level or aspect of the curriculum where it is most useful. Notes are also included regarding any specialized use of the material in question.

Each card also contains information common to many catalog cards, such as the type of aid or material, producer, date, in the case of motion pictures the running time in minutes, and of filmstrips the number of frames, series, and the recommended grade levels by the coding P EL JH SH A and In-service.

The catalog is primarily for teacher, not student use, although some very worthwhile and carefully directed student activities have centered around it. In organization it closely follows that of a standard library card catalog. Each item is given an appropriate Dewey classification number, and our own material type number, such as MS for motion pictures, FS for filmstrips, etc. The material type number (MS, FS, etc.) is numerical under each class, the number showing how many films, for instance, in the particular class. For example; No. 598.2MS1, MS2, MS3 shows we have three different films on birds, and print copies of each title are indicated by Cop. 1, Cop. 2, etc., on our control or shelf list master card. For our subject headings we use the *Sears List of Subject Headings*, but adapt and modify them as our curriculum needs indicate. Our catalog subject heading cards were carefully drawn up by our staff and ordered to meet this need.

The cards themselves are similar in format to regular library cards, but again have been adapted to fit our needs. The title is carried to the left margin and is followed by the call number, both *underlined*. By using a

specially designed Audio Visual Materials Requisition, the schools merely have to copy the underlined data in making a request for a particular item, plus their request dates. This device by itself has greatly minimized errors in ordering and makes the catalog a more efficient tool.

As each catalog reached the school it initially contained approximately 15,000 cards, all of which were written, produced and processed in the Department of Audio Visual Education. Needless to say, it has been a major undertaking to prepare, file, and arrange these cards and many teachers, administrators and parent groups have helped with the final filing. In each secondary school the regular audio visual building coordinator handles the additions to the catalogs, and in the elementary and special schools usually one teacher has accepted this as a professional responsibility.

In summary, what are the advantages of this catalog? Most important, it makes readily accessible, in one spot, and under any given heading or subject, all of the materials held by the department. The color-keying is good psychologically in helping focus attention on the wide variety of fine materials available. It greatly facilitates departmental communication with the teaching staff as to new and current materials. We no longer contend with a constant problem of an out-dated catalog—it is current. Once established the maintenance costs are low and easily adapt themselves to regular routine processing procedures. Also, it is invaluable in the elimination of out-dated, damaged and non-replaceable materials by allowing us to send out a list of cards to be pulled and destroyed. And last, but not least, a factor that was a surprise to us. The public relations aspect of the catalog was underestimated, not only from an in-service standpoint, but with the parents! During the last year we have been asked to present explanatory programs on the catalog to a number of P.T.A. and similar groups.

**Dr. Sanborn holds cards from Catalog concerning materials shown; Apache baskets, Kachina dolls, films, filmstrips, etc.**

**Mrs. Geneva Videen, Preview Consultant, looks up a title in the Card Catalog.**

**Audio Visual Department staff members, Mrs. Violet Orchard, Mrs. Alice Simpson, and Mrs. Geneva Videen, complete filing in the last bank of card catalogs for distribution to the public schools of San Francisco.**

DIRECTORY OF LISTED SOURCES ..... Pages 440-441

## How To Use the Blue Book

Audio-Visual materials of all kinds are listed in the following pages and are grouped according to the classifications shown above. For the most part, the materials listed have been released during the past academic year, as they were available, and have appeared in preceding issues of Educational Screen for 1957-58. In addition, many entirely new materials have been incorporated in this issue's listings.

The producer or primary distributor of each item is indicated by name or coding appearing in CAPS following the title and classification of material. You should contact such sources for purchase or rental, or any additional information desired. Addresses will be found in the Directory of Listed Sources at the end of this BLUE BOOK.

# YOUR GUIDE TO THE NEW, LOW-PRICED KODAK PAGEANT 16mm Sound Projector, Model AV-085

When you select a sound projector, demand more than just a machine for showing movies. Use as your standard the new Kodak Pageant, Model AV-085, at just \$439.\*

1. **Easy setups**—No muss or fuss for you (or your students). Film path is printed on projector. Reel arms fold into place; drive belts are permanently attached. You're sure every show will be off to a good start.
2. **Image brightness**—Don't settle for washed-out pictures, even in hard-to-darken rooms. Get the sparkle and details that the Pageant's Super-40 Shutter provides—40% more light than an ordinary shutter at sound speed.
3. **Full range sound**—A speaker must be baffled to make the low tones fully audible throughout the room. The Pageant's NEW, compact 11 x 6-inch oval is *baffled* in an attractive case that forms the cover for your projector.
4. **Permanent lubrication**—The most common cause of projector failures is improper oiling. You never have this difficulty with a lubricated-for-life Pageant. It's always ready to go when you are!
5. **Rugged and compact**—Printed circuits in the new 8-watt

- amplifier are rugged, help make this unit compact and easy to service. You can easily move it from room to room, set up to show almost anywhere.
6. **Fidelity control**—This feature is important because a sound track can be on *either* side of a film. Only with a focusing control like the one on the new Pageant can you get the optimum sound, *no matter* which side the track is on.
7. **Protection against wear**—The pulldown claw moves the film 28,800 times during a single showing of a 20-minute movie. A tungsten carbide tooth on the new Pageant makes this part virtually wearproof.
8. **Grounded power cord**—New 3-wire cord (complete with adapter for 2-wire outlets) meets electrical codes in all locales.

This exceptionally fine projector is only \$439. Ask a nearby Kodak Audio-Visual Dealer to demonstrate the AV-085. Or, write for new Pageant booklet giving all the facts.

\*List price subject to change without notice.

EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

## TO GET MORE INFORMATION

If you wish further information about any of the following materials, use the Reader's Service Coupons on pages 441-442 or write **EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE**, 2000 Lincoln Park West Bldg., Chicago 14, Illinois. We shall be happy to forward your requests to the sources of these materials.

Prices given for audio-visual materials are subject to change. Check with the producer or distributor of a particular title for the latest sale or rental price.

## AGRICULTURE

- Americo's Farms: \$12 Billion Problem** fs NYTIMES 58fr si b&w \$2.50. Ever-increasing production of farm commodities and the steadily shrinking role of the farmer; impact of the machine revolution; ramifications of the problem of surpluses; "parity" and the Soil Bank.
- Can We Solve the Farm Problem?** mp 20TH 20min sd b&w \$90. Today's agricultural surpluses, according to the film, result from the planting of more land and the use of newer equipment in World War II. Farmers need to be given a fair return and at the same time surplus stocks must be reduced.
- Enemy Underground** mp MODERN 13min sd col free. Cotton growing problems and solutions.
- Eradicating the Khapra Beetle** mp USDA 14min sd col. Striking scenes of control measures for the world's worst pest of stored grain.
- Farm Fathers** 5fs LONG si col \$22.50 ea \$4.80. Work on wheat, truck, fruit, cotton and dairy farms as seen through the eyes of children living there. Pri Int
- Farm Machines for a Land of Plenty** fs VEC 36 fr si b&w \$3.50. Development of power machinery that revolutionized American farm methods and raised the standard of living in America to the highest in the world.
- Fruits for the North** mp MINNESOTA 20 min sd col \$160. Efforts of scientists in breeding fruits adapted to the northern climate of Minnesota where early pioneers found only wild plums and inedible crabapples.
- Hold Your Horses** mp MODERN 22min sd col free. Maintenance problems of farm tractors.
- How to Make, Store and Feed Quality Silage** sfs MEREDITH 56fr LP sd col \$6.95. Planting, seeding, mixing, preserving, harvesting, storing, feeding and mechanizing the handling of silage as a major source of digestible protein. SH C A
- Japanese Beetle** mp USDA 13min sd col & b&w. History of the pest and tested methods of battling the beetle; Federal and State control programs and quarantine regulations.
- Land Changes** mp USDA 14min sd col loan. How wornout land acquired for national forest purposes was improved by reforestation, protection, and proper management.
- Marketing Farm Products** mp USDA 17 min sd col loan. To promote world marketing of U. S. farm products, Department of Agriculture Attaches serve as eyes, ears, and voice of American Agriculture in 60 foreign locations. Promotional efforts shown.
- My Conservation Reserve Acres** mp USDA 5min sd loan. Story of how a farmer and the local Soil Conservation Service technician work out a plan for participating in the conservation reserve part of America's Agricultural Soil Bank Program.
- New Look at Electric Farming** mp USDA 10min sd col loan. Uses of electricity in modern farm production and the farm kitchen.
- Old Mac Donald** mp MODERN 27min sd col free. Story of meat, milk and egg production on a modern farm.
- Our Magic Land** mp USDA 17min sd col or b&w loan. No greater magic exists than the wonder of life itself—a seed dropped in the earth magically pushing through the soil to become a stalk of full-kerneled corn or a fine tree sheltering and feeding the wildlife of the forest. Nature asks only man's efforts in conservation.
- Story of California Agriculture** mp AVIS 18min sd col \$150. Beginning with the days of the Spanish padres, through the gold rush and the coming of the railroad, agricultural development is depicted.
- Story of John Porter** mp NCA 25min sd col free. Careers in the field of horticulture explored. Shows men and women continuing the search that results in new discoveries in breeding, growing, harvesting, and marketing fruits and vegetables. SH.
- Successful Farming** fs (series) MEREDITH si b&w. Titles include: **How To Build Fence** 43fr \$3.50; **How to Save More Pigs** 34fr \$2.25. SH C A
- Western Carrots & Western Head Lettuce** 2fs WGA 50 & 54 fr col \$2.50 ea. Int.
- What is a Farm Worth** mp USDA 19min sd col loan. A young farm tenant couple views an appraisal demonstration. **For more information circle 113 on coupon**

## ARMED FORCES

- Armed Forces Films** A catalog listing hundreds of fine films that may be borrowed, at no cost other than return postage, may be obtained by writing: Department of Defense, Office of Public Information, Audio-Visual Div., Room 2E791, Pentagon, Washington 25, D.C. Army, Navy, Air Corps and U. S. Marines film distribution centers, as indicated, should be contacted directly. Full particulars are given in the general Armed Forces Films catalog. Additional titles are released through the U. S. Office of Education, Visual Education Service, Washington 25, D.C.

**Corporal Story** my ASSOCIATION 17min sd col or b&w free. Development and test-firing of the Army's rocket-powered, surface to surface guided missile and what this new weapon means to America's defense.

**Defense and Disarmament** fs NYTIMES 59fr si b&w \$2.50. Quest for the reduction of armaments that has been intensified as a result of the dread weapons of the Atomic Age and the ever-increasing burdens of national security; changing defense patterns; vital issues of global strategy and national defense.

**New U.S. Air Force Films** 8mp UWF **Thunderbirds** (14min sd col) shows jets in action stunts; **Winged Wizardry** (3min sd) shows more jet tricks in formation; **Sentinels in the Air** (15min sd) emphasizes role of Air Force Reservists; **Techniques in Aircraft Fire-Fighting and Rescue** (29min sd col); **Air Force News Reviews** numbers 11, 12, 15, 16.

**Revolution in the Navy** mp MH 55min sd \$195. Effects of atom power and guided missiles on the U. S. Navy.

## ARTS AND CRAFTS

**Adventuring in the Arts** mp GSA 22min sd col r \$4.25. Girl Scouts, inspired by visit to county fair, embark on many creative arts and crafts projects. JH

**Alaskan Eskimo Arts** 24sl ART COUNCIL \$18. With written commentary.

**American Painters 1815-1865: Part I.** 45 sl ART COUNCIL. \$34. From Boston Museum of Fine Arts Karolik Collection, shows still-life, portraits, genre, marines, primitives. Written commentary.

**American Painters 1815-1865: Part II.** 31sl ART COUNCIL. \$24. Also from Karolik collection, shows landscapes. Written commentary.

**Appreciation of Pictures** (series) 12fs BOWMAR col single-frame set \$55 ea \$6; double frame \$75-\$75.00. **The Artist's Medium; Line and Linear Construction; Space; Volume and Tone; Movement and Colour; The Content of Art; Religious Art—Symbolic; Religious Art Combined with Realism; Idealism; Realism—Portraiture; Genre and Still Life; Man's Environment; Modern Art.** (Visual Publications, Ltd., London, England) SH C

**Art and You** mp FA 10 min sd b&w \$50 col \$100. Art as a way of expressing our feelings and thoughts. People, nature, world in art. For appreciation and creative exercises Int.—HS

**Art Council Aids** (additions) sl 2x2 Kodachromes. Australian Bark Painting (8) \$6; Primitive Indonesian Art (13) \$9.50; Alaskan Eskimo Arts (24) \$18; American Painters 1815-65—Karolik Collection Landscapes (31) \$24; Portraits, genre, etc. (45) \$34.

**Art in the Western World** mp EBF 30min sd col \$360. Artistic production from the XIII to the early XX century is related to historical and cultural trends of its times. Eighty works of art in the National Gallery at Washington are featured. SH C A

**The Art of Leather Carving** mp SULBRUCE 20min sd col \$160 b&w \$90. Joey Smith, expert craftsman, demonstrates professional results with kit of only nine basic carving and stamping tools. JH—A

**The Art of Rouault** 6fs LIFE col \$30 (set), \$6 ea. Brilliant paintings create 1893-1952 in rich beauty of their original colors, also the stained glass windows designed for the chapel at Assy. SH—C

**Art Slide Sets** sl ART COUNCIL 2x2 Kodachromes with written commentary. **Primitive Art, Children's Art, Foreign Poster Art, Design Elements, Modern Jewelry, Historic Textiles, Japanese Masks, Prints, Toys.**

**Australian Bark Painting.** 8 sl ART COUNCIL \$6. Map and printed commentary included.

**Child Art and Nature Series** 3mp BAILEY 6min sd col \$165 (set of 3) ea. \$60 r \$3. Children in the films interpret their own experiences by using inexpensive art materials. Titles: **Birds and Etching, Insects and Painting, Weeds and Mosaics.** Produced at University of Wisconsin. Prim. C A

**Children Who Draw** mp BRANDON 44 min sd. Delightful and perceptive portrayal of small children's thoughts and actions as reflected in the pictures they design. Photographed in Japan.

**Cornelius Krieghoff** fs NFBC-BOWMAR 59fr col \$5. Captions and Manual. Dutch artist's paintings of French-Canadian life of 19th century. For both art and history. SH

**Cubism** mp CINEMA 16 17min sd col r\$12. Aims and techniques of this school of art explored in a consistently provocative survey featuring many outstanding Cubist paintings from European museums unknown in this country, accompanied by an authoritative English narration.

**Design Sources: Human Face and Figure** fs VEC 28fr si b&w \$3.50. Some of the many ways in which the figure and face may be used as a source of design problems.

**Design Sources: Living Things** fs VEC 30fr si b&w \$3.50. Over 100 different designs motivate the student's creative expression.

**Drawing a Portrait** mp EBF 10min sd col \$120. Eliot O'Hara sketches an ellipse on paper and then draws a facial hoop to orientate face and features. He then draws the eyeline and locates the eyes. Other steps in drawing are carefully delineated. SH.

**Educational Miniatures LIBRARY** \$5 per set of 32. Two-inch high plastic figures of people in colorful native costumes from around the world.

**Exploring Art Systems** mp PORTAFILMS sd col \$100. What are "systems?" An artist may approach design in many ways. The same figure is rendered according to a variety of systems. In each the artist explains just what he is doing—and why. TT SH C A

**French Paintings in European Collections: Late Nineteenth Century & Modern** — Loan collections of 30 and 20 paintings, respectively — FACSEA loaned by subscription. Fine color reproductions mounted on gray board under plastic. 15x20 to 25x30 inches.

**Goya** mp HARRISON 20min sd b&w \$110. Life of the artist told through his work. Original score composed and played by Vincente Gomez, Guitarrist.

**SUDDENLY**  
*they respond...*

when you teach with the  
**AO Spencer Opaque Projector**

**SO EASY** Teaching and learning are much easier with this unique projector. You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them... subjects become dramatically alive... and your class responds as a unit. You teach more effectively because you show what you mean. Learning is more fun this way.

**SHARPEST IMAGE** Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen... *edge to edge... corner to corner.*

**1,000 WATT INTENSITY** High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up. The entire system is cooled by a quiet, motor driven fan... a constant stream of air over projected copy keeps it safe.

**STURDY, PORTABLE** The projector is built of rugged, light-weight, lifetime aluminum. Carry it anywhere. Precision mechanical fitting throughout assures permanent optical alignment.

**The Teens** mp MH 26min sd bGw \$140. Latest in the "Ages and Stages" series, shows the normal behavior of three teenagers in the everyday life of an urban middle-class family. Shows

## Scratches on Film Irritate Audiences

Scratches are havens for dirt, and refract light improperly. On the screen, they mar the picture and may distract attention. If on the sound track, they produce offensive crackling.

Fortunately scratches can almost always be removed — without loss of light, density, color quality, or sharpness.

## RATEOMETER

**MAKES IT EASY TO IMPROVE READING**

### ★ EASY FOR THE STUDENT

For ages 10 to 80, the AVR Reading Rateometer encourages self-help in reading improvement. Reading rate is shown above guide bar on ingenious face scale. Students learn its use in minutes; enjoy its guidance in rate improvement.

The easy-to-use Rateometer is now in use in thousands of schools, high schools and colleges.

### ★ EASY FOR THE TEACHER

Students require minimum guidance in using the Rateometer. Reading rate improves from 30 to 300%. The Rateometer is adaptable to any program, any length of practice session, any comprehension testing program.

Lifetime electric motor insures clock accuracy and trouble-free service for many years.

Lightweight (2½ lbs.), small size (8½" long) and carry-case carton allow portability and home use by students evenings or weekends.

### ★ EASY ON THE BUDGET

The Rateometer is budget priced at \$35.00—lower in quantities. Equip a whole classroom for the cost of a few pacers of less functional and less effective design.

Actual experience over a 5-year period shows that Rateometer cost runs as low as 37c per pupil.

## WHEELIT - 49 to 1 Choice

-of California audio-visual co-ordinators

The non-folding WHEELIT No. 4102 does a remarkable job of solving the transportation problem for audio-visual equipment in a rapidly growing number of the nation's schools and colleges.

Answering a questionnaire after a demonstration of competing equipment, 49 out of the 50 co-ordinators present in California gave WHEELIT the nod over all other makes.

Asked to state their reasons in detail, these co-ordinators cited the saving on heavy lifting and fatiguing carries, the exceptionally easy steering, large Formica top wooden platforms, sound absorption and lack of vibration. WHEELIT is your first choice too!

All-steel construction (except platforms) . . . Precision workmanship . . . accurate assembly . . . ease of maneuvering and smooth, efficient operation characterize all WHEELITS . . . made both in non-folding, and folding models for interior, or car and outside purposes. Heavy straps secure all loads.

For complete specifications and prices see your nearest audio-visual dealer or write:

# **DYNAMIC** *CREATIVE* **QUALITY** in the **67 Newest Coronet Films**

**incorporating the most modern, effective techniques developed in 19 years of successful educational film-making.**

- ... skillfully correlated to teaching units
- ... devoted exclusively to classroom subjects
- ... prepared with the help of world-famous educators
- ... reflecting the entire curriculum at major grade levels
- ... produced in full, natural color

Since 1939, Coronet Films has been producing outstanding 16mm sound motion pictures regularly. The rich experience of these years has reached its zenith in the films described on these pages—among the finest available today. And these are only a fraction of the more than 800 Coronet films now available in your choice of full color or black-and-white.

The keynote of Coronet's huge production program is "Creative Quality"—that essential added ingredient of fine filmmaking which combines: the courage to pioneer . . . the skill to create improved film techniques . . . the unflinching devotion to high standards of quality in every step of production. This creative quality has won for Coronet Films overwhelming acceptance in all fields of education—and has helped build the largest, most up-to-date group of teaching films in the world.

The films described on these pages are the Coronet releases from September 30, 1957 to October 1, 1958. Each is a distinctive, meticulously planned motion picture. Several have been more than two years in the making. Each serves the unique purpose of presenting, clarifying, and explaining a single subject authentically and dramatically.

**Beginning Good Posture Habits (1 reel)** The components of good posture, their effect on body growth, and how youngsters can improve their posture habits.

**The Frog Princess (½ reel)** A charming tale in animation about a frog princess, a handsome prince, and a wicked magician.

**Leonardo da Vinci and His Art (1 1/4 reels)** A close examination of this artist's famous works increases appreciation of his particular style and the beauty of his art.

**The Metric System (1 reel)** This history of the metric system compares the English and Metric units, showing the advantages of computations in the latter.

**\*Poe, Edgar Allen: Background for His Works (1 1/4 reels)** Major events of Poe's life are outlined with narrated excerpts and re-enactments from many of his works.

**Reproduction in Plants (1 reel)** Explains the processes involved in asexual and sexual plant reproduction and indicates how strains are improved through selective breeding.

**\*Rice in Today's World (1 reel)** The importance of rice throughout the world, with emphasis on the Orient and factors contributing to its growth and culture.

**Rubber in Today's World (1 reel)** A review of the history of rubber, including primitive methods of manufacture and vulcanization, and a look at the role of synthetics.

**The Sea: Background for Literature (1 reel)** Dramatic excerpts from some of the world's great sea literature are visualized to encourage further reading and develop understanding.

**Simple Plants: Algae and Fungi (1 1/4 reels)** Describes the major characteristics of simple plants and their value to mankind.

**Simple Plants: Bacteria (1 1/4 reels)** Reveals through photomicrography the characteristics of the three known groups of bacteria.

**\*The Sun and How It Affects Us (1 reel)** Telescopic motion pictures show the physical nature of the sun and how it affects life and weather on the earth.

**United States Expansion: The Northwest Territory (1 1/4 reels)** Recreates major events leading to the opening of the Northwest Territory to large scale settlement.

**\*United States Expansion: Overseas (1893-1917) (1 1/4 reels)** The changing policy and new problems of overseas expansion into Hawaii, Cuba, the Philippines, and Central America.

**The Vikings and Their Explorations (1 reel)** Through costumed dramatizations and authentic Viking artifacts, the film recreates Norse culture and history.

**The War of 1812 (1 1/4 reels)** The causes, broad strategy, and ultimate results of the War of 1812, showing the major areas of battle.

**Wolfe and Montcalm (2 1/2 reels) (B&W only).** Preparations for the Battle of the Plains of Abraham, the strategy of attack, and the death of the two great generals.

**Yugoslavia (1 reel) (B&W only).** A survey of the geography of Yugoslavia, including city life in Sarajevo and Belgrade, farming conditions, and economic developments.

**FILMS FOR COLLEGE AND ADULT GROUPS**

**Education in America: The Seventeenth and Eighteenth Centuries (1 1/2 reels)**

**Education in America: The Nineteenth Century (1 1/2 reels)**

**Education in America: Twentieth Century Developments (1 1/2 reels)**

A unique series of motion pictures surveys the momentous events in three hundred years of American education. These films provide excellent information on the beginnings of our educational system and its adjustments to social change through the years.

**Profiles of Elementary Physical Education (3 reels)** Stresses successful methods used in teaching elementary physical education, with many ideas for the guidance of class activities.

**\*Films to be released between July 15 and September 30, 1958.**

*All films are available in either color or black-and-white, except for three as indicated.*

**CORONET FILMS**

Dept. ES-758 Coronet Building Chicago 1, Illinois

**HOW TO OBTAIN CORONET FILMS**

# A SIGNIFICANT ADDITION

## to Religious Filmstrips

### BROADMAN'S BOOK OF ACTS FILMSTRIP SERIES

#### Based on Broadman's popular motion picture series

Sixteen filmstrips, carefully produced from beautiful full color stills shot on location during the filming of the Book of Acts Film Series, make up this imposing new addition in religious filmstrips. Comprising four new series, these filmstrips bring to life the early disciples and their courageous adventures in faith. Each filmstrip is a striking portrayal of these men who carried Christ's message to the world.

#### The four series are

##### HOW TO BE SAVED SERIES

Designed to present the plan of salvation. Each deals with a different group of people who, under different circumstances question the new salvation.

- A LOST PHARISEE—35 frames
- A LOST SOLDIER—44 frames
- A LOST CITY—39 frames
- A LOST JAILER—39 frames

A LOST SOLDIER

##### PERSONAL WITNESSING SERIES

- Big Animals of Africa** mp EBF 11min sd col \$100 b&w \$50. Zebras, giraffes, wildebeest, eland, Thompson's gazelle; cheetahs, leopards, lions; hippos, elephants, rhinoceros; ostrich, baboon, monitor lizard, crocodile, armadillo. Int.
- Biology and Geography of Pacific Northwest** sl THOMPSON col 2x2 35c ea. Several thousand subjects, arranged in sets of 30-100 slides. Trees, birds, Indians, human physiology.
- Birds of Canada** (series) fs BOWMAR. **The Common Loon** 36fr col \$5. JH **The Kingfisher** 26fr col \$5. Int JH
- Canadian Animals** (series) fs NFBC-BOWMAR col @ \$5. Captions and Manual. **Toads and Frogs of Eastern Canada; The Raccoon; The Pocket Gopher; Snakes of Canada.** JH SH C
- Chameleon** mp IFB 8min sd col \$80 r\$4. Characteristics and habits of the chameleon are depicted in color with extreme close-ups to show details of feet, eyes, tail.
- Climbing Plants** mp UWF 10min sd. Speeded up photography shows how weak-stemmed plants grow, entwine, and attach themselves; sharpthorned climbers, aerial-rooted ivy, tendril clinging pea.
- Collection and Shipment of Insects** fs USDHEW 70 fr 10min sd col loan (purchase from UWF). Correct methods of collecting, preserving, and shipping insects and certain other arthropods. Collecting equipment and techniques are shown; methods of pinning and labeling with pertinent data; and packing for distant shipment.
- Elephant Baby** mp EBF 14min sd col \$150 b&w \$75. Training of a work elephant from the time it is born until it takes its place in the work line. Pri EI
- Flat Pictures** 3 sets DODSON col \$1 per set of 22 pictures 7x9". a) Birds, b) Flowers, c) Animals.
- Flat Pictures** 9 sets DONOHUE 10x12" in 4-color offset \$1—12 to set: **Traveling with the Birds, Wild Animals, Domestic Animals, Birds at Home, Animal Babies, Animal Ancestors, Wildflowers.** Pri. Int.
- Forest Tent Caterpillar** mp NFBC 18min sd col \$160 b&w \$80. Damage which this voracious insect inflicts on deciduous forests; closeup photography shows life cycle, feeding habits.
- Fossils: Clues to Prehistoric Times** mp CORONET 11 min sd col \$100 b&w \$55. Where fossils are found, how they were formed, and what they tell us about life on earth. Museum dioramas, animation, and fossil specimens are used to explain the work of scientists and their findings. Int.
- Fossil Invertebrates** 11sl GBS \$10.20. Color transparencies of dioramas of fossil invertebrates by George Marchand, taken at the Chicago Natural History Museum.
- Fossil Vertebrates—Paintings of Restorations by John Conrad Hansen** 37sl GBS. Paintings and exhibits in the Chicago Natural History Museum.
- Frog (Second Edition)** mp EBF 11min sd col \$100 b&w \$50. Reveals the fascinating life story of the frog, utilizing close-up photography, amazing time-lapse and slow-motion sequences. Traces the frog's development from eggs to adult, with interesting details of its way of life. Int.
- Growth of Seeds** mp EBF 13min sd col \$125 b&w \$62.50. Designed to help the student understand and appreciate the importance of seeds to man, to know the function of plant seeds in the reproductive process, to observe the structure and different parts of the seed, and to learn the conditions most favorable for seed germination. JH.
- Habitat Groups of Mammals** 60sl GBS \$57.80. This comprehensive set includes all of the slides offered in the Chicago Natural History Museum's exhibits of mammals.
- Hippos** mp MH 11min sd col \$110 b&w \$55. Life of the hippopotamus in New York's famed Bronx Zoo and in its native Africa. Scenes show two hippo babies in the zoo; then life on the spacious veldt below Mt. Kilimanjaro in Tanganyika.
- How Green Plants Make and Use Food** mp CORONET 11min sd col \$100 b&w \$55. Stressing the concept that all living things depend directly or indirectly on food made by green plants, shows the factors required by plants for life and growth: sunlight, carbon dioxide, water, and soluble minerals. Describes process of photosynthesis. SH.
- How Living Things Change** mp CORONET 11min sd col \$100 b&w \$55. Man is able to effect changes in plants and animals but living things have been slowly changing for millions of years. Explanations offered for these changes include the major evolutionary theories of Lamarck, Darwin, and de Vries which are examined, illustrated, and compared. SH.
- Human Body: Digestive System** mp CORONET 14min sd col \$125 b&w \$68.75. Animation, X-ray, and live action scenes of the major digestive organs give a detailed account of the function of this system—to break down chemically the complex nutrients, carbohydrates, proteins, and fats into simple food materials. Indicates roles played by the salivary glands, esophagus, stomach, pancreas, liver, gall bladder, and intestines. SH.
- Learning About Flowers** mp EBF 11min sd col \$100 b&w \$50. Illustrates that the main function of a flower is to produce seeds. It is designed also to help the pupil appreciate the beauty of flowers and to recognize some of the more common flowers of our fields and gardens. Pri.
- Learning About Leaves** mp EBF 11min sd col \$120 b&w \$60. Varieties, functions, relationship to other parts of the plant, seasonal changes, usefulness. Int. JH
- Life Cycle of a Plant** mp UWF 10min sd. Growth is traced from seed to miniature plant to new seed.
- Life in a Cell** mp WORLD WIDE 14min sd col \$145 b&w \$72. Based on the life cycle and behavior of the Amoeba shown through dark-field cine photomicrography. Planned to facilitate the teaching of such biological concepts as: What does it mean to be alive? How can a single cell perform the basic life functions? How are the one-celled animals classified? Why are scientists interested in life in a single cell? SH.
- Life in the Sea** mp EBF 11min sd col \$120 b&w \$60. Three types: the microscopic, the mainly stationary, and the moving. Importance of sunlight; primary search for food and avoidance of being eaten by others. Int.
- Life on a Dead Tree** mp FA 10min sd col \$100 b&w \$50. Dove and Tommy find an old dead tree in the woods. As they explore it, they find that it is the home of many different plants and animals: lizards, beetles, crickets, slugs, fungus plants, tree salamanders, ants, gopher snakes, and many other living things. Int.
- Life Story of Fern** mp UWF 16min sd. Study of two generations of the fern showing structure of male and female organs and process of fertilization.
- Lions at Home** mp MH 11min sd col \$110 b&w \$55. Filmed on location in Africa, shows hunting habits, favorite prey, enemies, sociable family life.
- Living and Non-Living Things** mp UWF 10min sd. Explains differences between plants and animals and non-living things. The chicken and the runner bean are compared with each other and with a kite, railroad engine, crystals. Animated sequences add to the clarity of the presentation. Int.
- The Living Desert** 6fs EBF si col \$36 ea \$6. Based on Walt Disney motion picture classic. The life and environment of the desert is portrayed very clearly. JH SH C
- Looking at Cells** fs SYRACUSE 28fr si col. Color drawings illustrate structure, function and activity of various types of cells. Captioned. JH SH
- Man Against a Fungus** mp NFBC 37min sd col \$280 b&w \$140. Struggle waged each year against the wheat rust fungus. Animation, time-lapse, and cinephotomicrography illustrate the life cycle.

**Microscopic Life; The World of the Invisible** mp EBF 14min sd b&w \$75. The life to be found in a jar of pond water. Amoeba, euglena, volvox, rotifers, cyclops, daphnia, bryozoa, hydra, algae, diatom, and desmid. Int JH

**Mr. and Mrs. Robin's Family** mp CORONET 11min sd col \$100 b&w \$55. Story of a robin family from early spring until late fall.

**Nitrogen Cycle** mp UWF 14min sd. The route followed by nitrogen in its circulation between the atmosphere and compounds making up protoplasm of living organism. Photomicrography and cineradiology show actual functions of the root-hairs associated with nodules, fungi, and bacteria.

**Ostrich** mp IFB 7min sd col \$70 r\$3.50. Shown in their natural habitat on the Karroo in South Africa, their appearance, close-up details of structure of legs and feet, neck, head; feeding; movement; nesting and hatching eggs.

**Photosynthesis** mp UWF 15min sd. Chemical changes within the plant are explained by actual photography plus animation; carbohydrates formed in chlorophyll-containing cells; manufacture of glucose.

**Plant Fossils** GENERAL BIOLOGICAL **Small Set of Coal Age Plants** gives examples of five different species (\$2.50). **Introductory set of Coal Age Plants** consists of ten specimens, mostly fossil ferns (\$4.50). **Advanced Set of Coal Age Plants** consists of 12 selected specimens of ferns, lycopodiums and equisetums (\$14.50).

**Plant Survival** mp UWF 11min sd. Shows self-protective devices used in stages of plant growth and defenses of flowers and leaves against damage by roin and animals.

**Prehistoric Life — Mural Painting by Charles R. Knight** 38sl GBS \$35.30. Paintings and exhibits from the Chicago Natural History Museum.

**Protozoa** mp EBF 11min sd col \$100 b&w \$50. Vividly portrays the variety and life functions of one-celled animals. Photographed by one of the masters of color photomicrography, Dr. Roman Vishniac. Shows how Protozoa are classified, how they eat, and reproduction. SH.

**Reproduction in Plants** mp CORONET 13½min sd col \$125 b&w \$68.75. Sexual and asexual reproduction; self-pollinization, cross-pollinization. How plant strains are improved by selective breeding. SH JH

**Root Development** mp UWF 9min sd. Photography speeded up 30,000 times reveals root structure and growth. Action of root mechanisms and sensitivity of the root tip are demonstrated.

**Roots of Plants: 2nd Edition** mp EBF 10min sd col \$100 b&w \$50. Depicts types of roots, root growth, and osmosis. JH.

**The Salmon's Struggle for Survival** mp NFBC 27min sd col \$200. Because salmon must spawn at river headwaters its survival as a species is threatened by natural and man-made obstacles to the migration survival. JH SH

**Seed Dispersal** mp UWF 14min sd. Close-up photography shows devices that scatter, plant, and protect seeds—wind, animals, exploding fruits, seed burial.

**Seifritz on Protoplasm** mp EFLA 26min sd b&w \$105. Classic science teaching film, the "stuff of life" is demonstrated, its organization, response to stimuli, powers of adaption. SH C

**Simple Plants: Algae and Fungi** mp CORONET 14min sd col \$125 b&w \$68.75. How simple plants differ from higher plants; major differences between algae and fungi. SH.

**Simple Plants: Bacteria** mp CORONET 13½ min sd col \$125 b&w \$68.75. Useful and harmful varieties; growth, culture; antibiotics. Photomicrography reveals varieties and bacterial digestive process. Enzymes. SH JH C

**Spring Flowers of Eastern Canada** fs BOWMAR 92fr si col \$5. Forty-three of the most common spring flowers. EI-A

**Story of a Frog** mp UWF 13min sd. Slow-motion and X-ray photography together with animated diagrams explain the processes of digestion, assimilation, elimination, and circulation.

**Story of a Trout Hatchery** mp ATHENA 13min sd col \$135 b&w \$75. The life cycle of various kinds of trout as presented from the time of hatching to the planting in streams; part played by the state in operating fish hatcheries. **For more information circle 211 on coupon**

**Story of Bees** mp UWF 20min sd. Life cycle of the bee; collecting and storing nectar and pollen; work of the Queen; remarkable community life.

**Trees: How We Identify Them** mp CORONET 11min sd col \$100 b&w \$55. Students are motivated to greater interest in trees of their area; evergreen and deciduous; identification by shape, bark, leaves and fruit. Int JH

**The Vanishing Prairie** 6fs EBF si col \$36 ea \$6. Scenes from Walt Disney classic motion picture. JH SH C

**Walt Disney's The Arctic Wilderness** 6fs EBF col \$36 ea \$6. Based on the motion picture theatrically released. Each strip contains review and discussion questions: **The Northland, Rodents of the Northland, Marine Mammals of the Northland, Arctic Foxes and Wolves, Wolverines and Weasels of the Northland, Birds of the Northland.** Int.

**Water Birds** mp DISNEY 31min sd col lease. Product of the patient and painstaking three years' work of sixteen naturalist-photographers with narration and music added to create an Academy Award film. One of the True Life adventure series. Shows rare glimpses into the behavior of seaside and marshland feathered creatures.

**Wildlife and Timber** mp USDA 7min sd col & b&w. The interesting management relationship between wildlife and timber in the Ocala National Forest in Florida.

**Woodcock** mp IFB 6min sd col \$60 r\$3. Plumage, natural camouflage, nesting and feeding habits.

## CAMART Dual Sound Reader

- 16 or 35mm — Single and Double system
- Optical or Magnetic sound track
- Synchronized to any picture viewer
- Right to left or left to right operation
- 16 or 35mm Magnetic Model \$195.00
- 16 or 35mm Optical Model \$195.00

## WORKING WATER

How water is stored and brought to dry lands. Nature's balance of sun, soil, and water. Modern irrigation methods.

(Suggested for Resources and Conservation, Elementary through Junior High).

Write for catalogue and previews

PAT DOWLING PICTURES

1056 S. Robertson Blvd.,  
Los Angeles 35, Cal.

**Work of the Blood** mp EBF 13min sd col \$125 b&w \$62.50. Composition, function, circulatory systems, red and white cells, clotting and healing, transfusion technique. JH SH

**You and Your Eyes** mp DISNEY 10min sd col \$100. Unique characteristics (rods and cones) distinguish the human eye, allowing judgment of distance, color, closeup vision. JH-A

## SCIENCE: GENERAL

**Astronomy** 2fs UWF si b&w ea \$3.50. **The Planets, The Stars.** JH SH

**By Their Deeds** mp USDIBR 28min sd col free. Engineering and scientific aspects of water resources development in the fields of irrigation, hydroelectric power, flood control, recreation, navigation, etc. HS C A

**Climate and the World We Live In** mp CORONET 14min sd col \$125 b&w \$68.75. Shows the determining factors of climate — latitude, altitude, nearness to water, ocean currents, prevailing winds, and mountain ranges; similar types of climate. JH.

**Continental Glaciers** mp OSU 13min sd col \$130. A scientific tour of the Western Hemisphere's great Greenland Glacier by means of ice-breaker, snowcat, and helicopter. The anatomy of the glacier is graphically portrayed in an animated cross-section showing how snows build up and melt off as the vast interior ice streams out in ribbon-shaped outlet glaciers. SH.

**Conservation of Our Resources** 9fs EYE Set of 9 in color \$25 ea. \$4. Vital importance of natural and human resources and the basic need for their conservation. Titles include: **This Land of Ours, Waste of Our Resources, Need for Conservation, Water and Its Conservation, Soil and Its Conservation, Conservation of Our Forests . . . Wildlife . . . Minerals . . . Human Resources.** Int.

**Earthquakes and Volcanoes** mp FA 10 min. Causes and relationship to one another. Int.

**Elementary Science Series** fs VISUAL si col. Teacher-made productions in biology, physics, chemistry, safety, JH SH

**Exploration with a Space Satellite** 24sl AMNH Set of 24 2x2 slides \$14.40 r \$1.20. Prepared by American Museum-Hayden Planetarium astronomer Thomas D. Nicholson, the series illustrates and explains the development of the satellite program, the specific design and performance of research satellites, the kinds of studies which satellites can make possible, and the use of the Vanguard rocket in satellite launching. Discusses possibilities for observing satellites in space.

**Exploring Space** mp LdR 26 mi sd col \$175 r\$15; b&w \$100 r\$10. Development of rockets, fuels, mechanisms, jet propulsion, views of earth taken from V-2. Historical origins and perspective. SH C A

**500 Mile Adventure** mp RCA 30min sd col free. 1957 Memorial Day auto race at Indianapolis Speedway. Shows how a micro-miniature radio receiver is used to coordinate the filming of the race.

**Fundamental Elements of Weather** 10fs EYE Set of 10 in color \$25 ea \$4. **Weather and Life, Weather Powerhouse, Adventures of a Raindrop, Our Ocean of Air, Whirling Winds, World of Clouds, Thunder and Lightning, Weatherman at Work, Changing the Weather, Weather Folklore.** Int.

**Fundamentals of Science** 9fs EYE Set of 9 in color \$25 ea \$4. Deal with science in terms of the youngest children. Helps them to develop skills in making observations, doing simple experiments, interpreting pictures and diagrams, and developing and understanding general concepts in science. **Spring and Summer, Autumn and Winter, Air Wind and Weather, Just Animals, Animals Grow and Change, Plants Grow and Change, Experiences with Water, Sounds Around Us, Rolling Along.** Pri.

**The Geophysical Year** fs CUAF 42fr si b&w apply. Purpose and international participation. Arctic bases. Electronic calculators. Rockets, earth satellites. JH SH

**How We Explore Space** mp FA 15min sd color. Shows instruments with which astronomers observe and measure; color films of the planets, recession of Mars ice caps, Jupiter and its moons, spectacular display of solar prominences. JH

**Let's Visit the Smithsonian** fs SVE 50 fr col with record \$10 with guide \$6.50. History of its founding, authority by which it is administered, various museums and other facilities which make up its organization and carry on its work, representative exhibits. JH.

**Man in Space** mp DISNEY 35min sd col \$300 lease. Authoritatively traces rocket development from ancient Chinese weapons to modern missiles. Predicts the establishing of a man made satellite and depicts in detail how man will make his first flight to outer space.

**Meteorological Series** 6fs UWF **Cloud Formations** (25 fr, b&w), **Weather: Fog** (46), **Condensation Trails (Contrails -48 fr)**, **Thunderstorms** (63), **Turbulence** (51), **Low Ceilings and Low Visibilities** (40).

**Minerals and Rocks: Stones of the Earth** mp EBF 16min sd col \$150 b&w \$75. Proper methods of examining rocks, use of standard tests to identify and classify specimens, differences between minerals and rocks, formation of three kinds of rock, importance of geology and geologists. Int.

**The Moon and How It Affects Us** mp CORONET 11min sd col \$100 b&w \$55. Size, movement, distance in relation to earth; "seas," craters, mountain ranges; eclipses; phases; effect on earth's tides. Int JH

## VISUAL SCIENCES

Box 599E

Suffern, New York

**Primary Science** 6fs EBF si col \$36 ea \$6. For grades 2-3-4. **Night and Day, The Seasons, Our Weather, The Air, The Earth, The Night Sky.** Prim. Int.

**Restless Sphere** mp SCREENCRAFT 80 and 56 min versions b&w sd. Complete report on the International Geophysical Year, filmed in 17 countries and narrated by Prince Philip, The Duke of Edinburgh. Discusses studies of the earth's interior, the earth's surface, and the outer atmosphere.

**Road of the Stars** mp ROCKET 26min sd col free. History of rocketry; German leadership in World War II; current theory and experimentation; spectacular news reel footage of tests. SH C A

**Russian Rocket to the Moon** mp BRAN-DON 8min sd b&w \$30. Animation treatment of unmanned baby tank, shot for a 3-stage rocket launched from a cosmic space ship, refueled by another guided rocket in outer space. The tank lands on the moon and radios back its findings. JH SH C A

**Science Adventures** 6mp MOODY 12-15min sd col r\$6. Each film deals with young students' reaction to some natural science phenomenon, and relates science and religion by making God the ultimate reference for both. JH SH

**Science and Transportation Series** 6fs MH col \$35 ea \$6.50. Fundamental scientific facts behind the various means of transportation. **Moving Heavy Objects on Land** explains friction; **Moving on Water** explains flotation, movement, steering; **Overcoming Gravity** explains air travel; **Controlling Airplanes; Getting Power from Engines**—steam and gasoline; **Flying with Jets and Rockets.** Int.

**Simple Machines** fs VEC 24fr \$3.50. Basic facts concerning six simple machines and how they help man by multiplying his strength. Int.

**Space Scientist** mp NEUBACHER 11min sd col \$110. Scientist, in space suit, performs experiments inside a unique vacuum chamber, simulating phenomena of outer space. JH SH

**Space Technology** (series) mp UC 17 programs each 2½ hours r\$2300. A roster of 36 world-famed scientists presents a sound and imaginative exposition of the fundamental principles of very long-range ballistic missiles. Each of the programs may be retained 4 days and used as often as desired during that period. Lecture notes are supplied. C

**The Sun and How It Affects Us** mp CORONET 11min sd col \$100 b&w \$55. Size, distance from earth, physical nature and effect on earth's life, weather, tides. Corona, prominences, flares and sunspots. JH Int

**Things Dissolve** mp MH 10min sd b&w \$50. Using a wide variety of everyday examples, the film demonstrates that some things dissolve; some do not, and explains how important this is to us. Int.

**Treasures of the Earth** mp CHURCHILL 11min sd col \$100 b&w \$50. Animated film shows some of the ways mineral wealth has been deposited in the earth. Geologic changes and their effect. How coal is formed and how oil is trapped in the earth's folds. Selected for showing at both Edinburgh and Venice Film Festivals 1958. El JH Correlated with Heath Elem. Sc. Texts.

**Trip to the Moon** mp EBF 16min sd col \$180 b&w \$90. Utilizes direct observation of the night sky, the best astronomical photographs, and a series of original studies of the moon's landscape on which ore based third dimensional animated model motion pictures creating the illusion of an actual scientific observation of the moon. Int.

**Understanding Our Earth: Rocks and Minerals** mp CORONET 11min sd col \$100 b&w \$55. Detailed description of three main classes of rocks and their origin. Many varied uses of rocks and minerals.

**Voice of Sputnik** rec MRP 45rpm \$1 with booklet "The Earth Satellite." Actual signals from Sputnik 1; reverse side gives imaginative dramatization of carrier rocket. JH-SH-C.

**Whys of Elementary Science: Plants** 4fs FH 30fr ea si col \$20 ea \$6. **What Makes a Seed Sprout, What Makes a Plant Grow, How Do Plants Get Where They Grow? How Do Plants Help Us?** Pri.

**Whys of Elementary Science: Simple Machines** 4fs FH 25-35fr ea si col \$20 ea \$6. **How Wheels Help Us, How Levers Help Us, How Ramps and Screws Help Us, How Wedges Help Us.** Pri.

**The Whys of Elementary Science II** 4fs FH si col \$20 ea \$6. Simple machines: levers, wedges, wheels, inclines, screws, shown by stick diagrams. Pri.

For more information circle 169 on coupon

**The World Around Us: International Geophysical Year** fs NYTIMES 56 fr b&w \$2.50; series of seven \$15. Manual. How man is learning about his own planet and its place in space. Jh,sh  
For more information circle 215 on coupon

## SCIENCE: PHYSICS & CHEMISTRY

**The American Engineer** mp JAM col free. Panorama of achievements of 129 engineers, including atom-powered submarine, TV-phone, hunting uranium with helicopters. JH SH

**Atom Comes to Town** mp CCUS 29min sd col \$160 r\$15. Atomic advances shown include America's first atomic power stations, atomic radiation destroying live cancer cells, giant peanuts grown by atomic energy, radioactive automobile engines, atomic toothpaste laboratory, and other subjects.

**Atomic Physics** (series) 5fs UWF si b&w series \$17.50 ea \$4.00. **The Electron, The Positive Particle, The Nucleus, Atom Smashers, Uranium Fission.** HS C

**Atomic Physics** (series) 6mp UWF sd b&w. **The Atomic Theory** 10min \$60; **Rays from the Atom** 12min \$100; **Atom Smashing** 22min \$120; **The Nuclear Structure** 19min \$115; **Uranium Fission** 24min \$150; **Unlocking the Atom** 19min \$115. HS C

**Atoms for Peace** 3mp UWF ea 20min sd **Scientific Advancement** covers the progress made in production of atomic electric power, atomic radiation in food production and preservation, use of isotopes in manufacturing control;

**Working Together** describes cooperation of atomic scientists through international centers; **Training Men for the Atomic Age** explains the training program in nuclear physics for foreign scientists sponsored by the U. S. Atomic Energy Commission.

**Chemical Conquest** mp NFBC 25min sd col \$200 b&w \$120. How chemical research is battling plant plagues, and probing ultimate effects of toxic substances on food-producing soil. SH C

**Chemistry in College** mp INDIANA 14min sd col. Surveys class and laboratory work included in a chemistry major.

**Elementary Science** (series) fs VISUAL si col. New series in Spectracolor by veteran teacher-producer. El

**Electricity All About Us** mp CORONET 11min sd col \$100 b&w \$55. Jean learns about static, electrical circuits, how electricity is generated and its importance in home and industry. Int Pri

# INDUSTRIAL

# f & A

# AUDIO-VISUAL

# EXHIBITION

*The 2<sup>nd</sup> Annual*

Under the Auspices of the  
**NATIONAL VISUAL PRESENTATION ASSOCIATION**

An Exhibition of current audio-visual equipment, techniques and services in industry and education for conducting training and sales meetings, visual presentations, advertising promotions, etc. . . . A special exhibit on equipment and application of Closed Circuit Television . . . Extensive lecture program as well as continuous showings of outstanding films presented daily.

**OCTOBER 7-10**  
**NEW YORK CITY**  
Trade Show Building—500 Eighth Avenue

The following Associations will hold their Meetings, Workshops, or Seminars in conjunction with the Exhibition:

National Visual Presentation Association	New York State A-V Suppliers Association
Industrial Audio-Visual Association	Metropolitan A-V Council
Film Producers Association of New York	<b>GOVERNMENT EXHIBITS:</b>
Magnetic Recording Industry Association	U. S. OFFICE OF EDUCATION
	U. S. ARMY PICTORIAL SERVICES DIVISION
	U. S. NAVAL TRAINING DEVICE CENTER
	U.N.E.S.C.O.

**Detailed program and admission tickets mailed upon request**

Presented by  
**INDUSTRIAL EXHIBITIONS, Inc.**  
17 East 45th Street—New York 17, N. Y.      OXford 7-4978

**Electronics** fs CUAF 37fr si b&w. Apply Radio, Hi-Fi, radar, TV, and calculators examples of electronics application. History—1906, 1920, World War II. Look into the future. SH

**Energetically Yours** mp SONJ 13min sd col free. Animated cartoon treatment of evolution of power sources from human muscle to atomic fission. JH SH A

**Fuels—Their Nature and Use** mp EBF 11min sd b&w \$60. Principal fuels, their source the sun, how heat is transformed to mechanical energy. JH SH

**Heat—Its Nature and Transfer** mp EBF 11min sd b&w \$60. This is a second edition of earlier film **Distributing Heat Energy**. Theory, sources, transmission of heat energy. JH SH

**I Choose Chemistry!** mp BAILEY 15min sd col \$150 b&w \$75. A ninth-grade student becomes interested in chemistry and mathematics, decides to make science his life career. JH SH

**Introductory Physics** 162 mp lessons EBF sd col b&w. A full year academic credit course as taught by Dr. Harvey E. White. Mechanics (44 lessons); Properties of Matter (15); Heat (15); Sound (11); Optics (18); Electricity and Magnetism (24); Atomic Physics (9); Electronics (8); Quantum Optics (4); Nuclear Physics (7). SH C

**The Joyful Lunatic** mp CAR 26min b&w \$135. Joseph Priestly, scientist, preacher and political writer, driven from England to America; discoverer of oxygen. Alexander Scourby, Peggy Converse. JH A

**Les Cosmiques** mp FACSEA 20min sd by subscription. Work of a crew of scientists stationed at one of the highest peaks in the Alps to study cosmic rays; their nature and usefulness to mankind. French sound.

**Light** (series) 4mp UWF sd b&w. **Refraction** 8min \$45; **Lenses** 10min \$60; **Shadows and Eclipses** 10min \$60; **Spherical Mirrors** 13min \$75. HS C

**Our Friend the Atom** mp DISNEY 50min sd col lease \$350. A definitive story of the atom and its potential future in the service of peace and progress. Available in two 25-minute reels if desired.

**Sound** (series) 3mp UWF sd b&w. **Sound Waves** 16min \$90; **Musical Notes** 12min \$75; **How Television Works** 12 min \$75. JH SH C

## SOCIAL STUDIES: ECONOMICS

**American Imports: A New Look** mp 20TH 20min sd b&w \$90. Suggests that a good export-import policy would be to exchange only the best of one country for the best of another.

**As Consumers We're Owners** mp CO-OP 13½min sd col r\$5. How consumer cooperatives run supermarkets; advantages of customer ownership and control. JH SH C A

**Do Higher Wages Cause Higher Prices?** mp AFL-CIO 13min sd col \$80 r\$2. Semi-animated film loaded with facts and figures to argue why an expanding economy can usually absorb higher wages without raising prices.

**Face of the South** mp BFC 29min. sd col \$180.00. Documentary analysis of relationship of economic status to civil rights. Narrated by George Sinclair Mitchell, Ph.D., southern-born author, economist. Produced by Presbyterian Church USA.

**Lifelines U.S.A.** mp ASSOCIATION 26min sd col free. Story of American shipping.

**Marketing in Mexico** mp FAYERWEATHER 20min sd col \$150 r\$15. Analysis of economic classes, buying psychology, distribution channels, advertising, problems of marketing policy. Made for use in Harvard School of Business and by businessmen. C A

**Measure of a Man** mp ASSOC 28min sd b&w free. The values that life insurance contributes to family living.

**Mr. Webster Takes Stock** mp STERLING 30min sd b&w free. When a father finds his high school son wants to invest in the stock market he checks into this "stocks-and-bonds business" with humorous but highly informative results. SH A

**No Other Way** mp FPA 30min sd b&w free. History, functions and activities of the International Labor Organization. SH C A

**Organizing Begins at Home** mp AFL-CIO 15min sd col r\$2. Designed to be used as a discussion starter on house calls with staff and volunteer organizers. A typical organizer answers questions about strikes, dues money, seniority, and some anti-union questions.

**Protective Tariff vs. Free Trade** mp MH 26min sd \$125. Watches are used in this film to illustrate the considerable controversy centered around tariffs and the Reciprocal Trade Acts.

**Story of Creative Capital** mp CCUS 14min sd col \$110 r\$15. Animated film tells story of what capitalism is, where capital comes from and what it does.

**Trade in the Free World** fs VEC si b&w \$3.50. Free trade versus protectionism is the issue posed for student comment as the importance of interchange of world goods is made clear. SH

## SOCIAL STUDIES: GEOGRAPHY & TRAVEL

**Across the Pacific** mp STERLING 30min sd col free. 17-day trans-Pacific voyage in the luxury liner Orsova, embarking at Vancouver, continuing to San Francisco, Honolulu, Suva in the Fiji's, New Zealand, and Sydney, Australia.

**African Giant** mp EDSERV 30min sd col apply. Panoramic report in film taken by Congressman Frances P. Bolton of 16 African lands south and east of the Sahara. SH C

**African Safari** sl MESTON 2x2 col set (136) \$33.32 pk of 4 ea 98c. Photographed by Attilio Gatti.

**Alaska Today** fs VEC 33 fr \$3.50. History, climate, natural resources education, industry, and people. Int.

**Alaskan Eskimo** mp DISNEY 32min sd col lease. Complete story of a type of family life rapidly disappearing as modern civilization encroaches on these earliest of North American settlers. First of the People and Places series available to schools.

**Algeria Today** fs VEC 34fr si b&w \$3.50. Geographical features; people, their life and work; agriculture, industries; cities and villages; education, transportation; relations with France.

**Algerian Portfolio Series** 8mp STERLING free. Titles include **17 Centuries into Focus, Year of Decision, Eurafrika, Their Land, Their Family, Man in the Blue Kept, Hundreds of Busy Feet, Water Crops and Men, Men of Tomorrow**.

**Alice in Washington** mp ASSOCIATION 19min sd col free. Featuring the Lewis follows the heroine on a tour of Washington, Mount Vernon, and Williamsburg, Va.

**The Amazon** mp EBF 21min sd col \$200 b&w \$100. The story of the largest river in the world is presented in a stimulating film showing the people and resources of Northern Brazil. Int.

**Amish Folk of the Pennsylvania Dutch Country** fs PHOTO ARTS 50fr si col \$7 r\$3.

**Argentina: People of the Pampa—2nd Ed.** mp EBF 16 min sd col \$150 b&w \$75. Illustrates rural and urban life in Argentina by contrasting the rich agricultural areas of the pampa with the industrial, business and shipping area of Buenos Aires. Int.

**Asiatic Lands and People** 5fs JAM si col \$25.95 each \$5.75. Each filmstrip has a short preface of background information. There is a colorful pictorial map to locate each land. Titles include: **Japan** (43 frames), **Pakistan** (40), **Burma** (40), **Thailand** (40), **Malaya** (39). Int.

**The Atlantic Community** (series) 15 mp UWF sd b&w \$37.19 to \$45.08 (depending on length). Official U. S. presentation of the 15 key nations of the western world. JH SH

**Atlantic Region** mp NFBC 23min sd b&w. East coast region of Canada and the life and industry of its people showing influence of geographical factors on the development of the area. Int.

**Baltimore** fs VEC 26fr si b&w \$3.50. Landmarks important in our nation's history, institutions of learning, industrial growth of the city. Int.

**Beautiful Britain** (Series) slidebooks EPGB 32pp 9 photos 8 slides slotted into cover \$3.50. Information on architectural, scenic, literary and historic landmarks; titles currently available: **Canterbury; Oxford; West Country; Westminster Abbey, Scotland, London, The Tower of London, Shakespeare Country, Woburn Abbey**. JH SH A

**Brazil: People of the Highlands—2nd Edition** mp EBF 17min sd col \$150 b&w \$75. Harbor and city of Rio de Janeiro; climate, topography, and geographical divisions of the country; life of a wealthy coffee plantation owner and his family; mineral wealth of the highlands; education. Int.

**Brussels Worlds Fair** sl MESTON 2x2 col set (112) \$27.44 pk of 4 ea. 98c.

**Burma, People of the River** mp EBF 14 min sd col \$125 b&w \$62.50. A form family derives from the river and the jungle all that it needs. Shows frequent trips to the nearest village where the bazaars are held. Portrays the chief port and capital city, Rangoon. Int.

**Canada: People at Work** 6fs EBF av 48fr si col set \$36 ea \$6; **Fishermen of Nova Scotia; Villages in French Canada; Farm and City in Ontario; Wheat Farmers of Western Canada; Vancouver and the Western Mountains; Logging in the Canadian Forests.** JH

**Canada: The Atlantic Provinces** mp EBF 16min sd col \$190 bGw \$90. Overview of Nova Scotia, Prince Edward Island, New Brunswick and Newfoundland. 2nd edition 1958. JH Int

**Canada: The Industrial Provinces** (Second Edition) mp EBF 17min sd col \$180 bGw \$90. Regional geography, Ottawa, Toronto, Quebec, lumber, nickel, mills and factories, hydro-electric power, world trade. Int. JH SH

**Canada: The Pacific Provinces** mp EBF 16min sd col \$180 bGw \$90. Second Edition. Development of British Columbia; importance of Alcan Highway to development of the Yukon Territory. Int JH

**Canada: The Prairie Provinces** mp EBF 16min sd col \$180 bGw \$90. Manitoba, Saskatchewan, Alberta and the Northwest Territories, their geography, climate, occupations, products. Second edition. Int JH

**Canada—Treasure Land of the North** 8fs SCRIBNER'S si col \$28 ea \$4. Designed to give children an understanding of Canada, its people, and its way of life. Stresses similarities between our country and Canada. **Canada—**

**Our Good Neighbor to the North, Canada from Sea to Sea, History of Canada, People of Canada, Canadians at Work** (2 parts), **Canadian Handicrafts, Canadians at Play.**

**Canadian Geography** (Series) fs BOWMAR approx 46fr ea bGw @ \$3. **The Great Plains** (3 strips); **Harvesting the Coastal Forest; Introducing the Topographical Map.** NFBC prod. JH

**Canadian Profile** mp NFBC 53min bGw \$200. The insistent demands of the machine age on people in diverse callings, from coast to coast, where tradition dies hard yet adaptation to industrial expansion must be accelerated. Fishing, mining, farming, lumbering are affected as well as factory work. SH C A

**Canadian Wheat** mp NFBC 31min sd bGw. Animated sequences depict the geological and climatic changes that took place to produce the conditions favorable to grain growing; live-action shows mechanized wheat forming, research, grading and inspection. Int.

**Caribbean Souvenirs** mp DELTA 28min sd col free. Cuba, Jamaica, Haiti, the Dominican Republic, and Puerto Rico as seen by a business girl on flying Caribbean trip.

**Cartograph Visual Relief Globe** DENOYER 16". Combination of relief shading with contour layer coloring gives 3-D effect. Special devices: Ecliptic, Analemma, Equation of Time Scale. \$43-\$65.25.

**The Cascade Mountains**, mp MOYER 20 min sd col. Two great mountain chains join to form impressive scenic barrier. JH SH (geology)

**Country of Islam** mp CHURCHILL 16 min sd col \$150 bGw \$75. Life in Morocco as seen through the eyes of a 12-year-old native boy. EI JH

**Denoyer-Geppert Visual Relief Desk Maps** 15c each. In convenient 17x11" size, the maps feature contour coloring with relief shading. Latest political data superimposed. Titles include: **Europe, Asia, Africa, North America, South America, Australia.**

**Dynamic Southeast** mp UWF 18min sd col free. Shows the tremendous industrial expansion, the prosperous growth of agriculture through scientific management, and the development of natural resources in the Southern Atlantic Seaboard region.

**Eskimo Children on Baffin Island** fs BOWMAR 57fr col \$5 ea. Part I **Late Autumn and Winter.** Part II **Spring and Summer.** EI

**Europe in Color** (Series) Slidebook, 9 color slides, 9 photos EPG 32pp, with slides slotted into cover \$3.50. **Switzerland.** Physical geography, tourist centers, road engineering, winter holidays. JH—A

**Florida Highspots** mp UWF 10min sd bGw \$22.95. Scenic, industrial, recreational aspects draw all-year as well as winter visitors. EL—A

**Follow the Sunset** rec FOLKWAYS 10" LP. Charity Bailey sings 9 songs, "around the world," as narrator explains the alternation of day and night. Fits the Herman & Nina Schneider book (Doubleday) of same title.

**France: The Atlantic Coast** sl LAMBERT 30 for \$7.50. Coastal plains, beaches, towns, fishing, shipping, people.

**France: The Mediterranean Coast** sl LAMBERT 30 for \$7.50. Coastal plains, neighboring highlands, tourist centers, mountain villoges, historic sites, people.

**France: Mountains and Rivers** 60sl LAMBERT \$15 Vosges, Jura, Alps, Pyrenees, central plateau; mountains, valleys, towns, villoges, people; Seine, Rhone, Loire, Garonne, Rhine; rivers and tributaries.

**France Today** mp FACSEA 10min sd by subscription. Paris by night; colleges in the Latin Quarter; working people; French cooking and wines; artists; the Riviera; sports.

For more information circle 184 on coupon

**Germany, People of the Industrial West** mp EBF 16min sd col \$150 bGw \$75. Orientation map, the Rhine, major cities, political division East-West, lumber, vineyards, farms, handicrafts, the Ruhr, industry. Life of an individual mill worker. West Berlin. JH SH

**Great Land: Alaska** mp MODERN 28min sd col free. Alaskan eskimo life, winter sports and carnivols, Nome, Fairbanks, McKinley National Park, the Alaskan Highway, early and modern mining, schools, agriculture, and industry.

**Great New South** mp DELTA 28min sd col free. Pulp and paper plants, oil refineries, steel mills, vast hydroelectric systems, new Southern homes with electrical appliances, farm scientists at work, new cotton mills, synthetic fibre plants, etc.

For more information about any of these items, fill out coupon on pages 441-2.

# NOW it can be TOLD!

The outstanding Documentary films based on the John Nesbitt stories of important historical and cultural events are now available for the first time in 16mm, for school, church and community use. Expertly produced, featuring Hollywood stars.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

### WHEN WRITING . . .

to advertisers or to the primary sources of materials listed in this BLUE BOOK PLEASE MENTION . . . Educational Screen & A-V Guide.

Thank you!

**Assignment Overseas** mp AFOB 15min sd b&w r\$2.50. Throughout the world today there are 14 million sightless people. Who they are, where they are, and what is being done to remedy their plight is the poignant, human interest story of the film.

**Book Banning** mp MH 14min sd \$75. A self-appointed one-woman committee to ban certain books from the school libraries in California explains why she feels books are to be feared and what were the disqualifying aspects of the books and authors on her list. Alternate arguments are also presented.

**The Burden of Truth** mp USWA 67min b&w apply. A Negro worker tries to pattern his life according to the dogmatism of freedom and democracy. Points no finger regionally or racially, shows prejudices and "dark areas still needing the light of understanding and truth." Highlight of human rights sponsored jointly by Steel Union president and government of Pennsylvania. JH-A

**City Decides** mp CONTEMPORARY 28 min sd \$75 r\$7.50. Documentary story of public school integration in St. Louis, revolving around a teacher who was faced directly with a "racial incident" in his high school class. Suggests ways in which integration can be made easier.

**Clinton and the Low** mp MH 54min sd \$195. The desegregation record of one Southern community as written by its citizens. It shows the chain of emo-

tions and events that brought mob violence, community shame, and finally, a strong sentiment to comply with the law, to Clinton, Tennessee. Based on the TV series "See It Now."

**Colorado Cares** mp COLHEALTH 22min sd col free. Community effort to better the lot of migrant workers, health, schooling, housing, social status. SH A

**Crisis in Leavittown, Pa.** mp DYNAMIC 30 min sd b&w \$150 with 50 discussion guides and free sfs "The Good Neighbor." Interviews pro and con on integration of first Negro family to move into that community. Comment, analysis and discussion guide by New York University Center for Human Relations. Community groups only.

**Crossroads at Cedarmont** fs FRIENDSHIP 64fr si b&w \$3. Negro family moves into town where they had reason to expect they would be accepted without incident. The church as well as the community at large has mixed reactions. Open end contributes to further discussion. JH SH C A

**Facts on Film** microfilm SERS 35mm for microfilm readers and projectors. Legal decisions, editorials, original pamphlets, etc., aggregating over 100,000 items on race relations research. C A

**First Impressions** mp FAMILY 15min sd col b&w lease \$160-\$100 r \$8-\$5. A community learns how unfair and wrong snap judgments may be in appraising a newcomer. Int. JH A

**Francesca** mp ASSOCIATION 28min sd free. Produced in the village of Carcchitti, Italy, the film shows Francesca, a 12-year-old girl, unable to go to school because her family is too poor. She is befriended by Fiore whose family exists on the help he receives from the Foster Parents' Plan. He persuades the local Plan Lady to intervene in Francesca's behalf. Film shows her rehabilitation.

**The Good Neighbor** sfs DYNAMIC 90fr LP b&w \$25. A responsible businessman learns of housing discrimination against a Negro veteran and decides to do something about it. JH SH C A

**Harness the Sun and Sweeten the Sea** mp ATS 15 1/2 min sd col free. The role of the Society in fostering the industrial, scientific, economic and agricultural development of the State of Israel. SH A C

**Immigration Quotas—Are They Fair** mp MH 27min sd \$125. The complex and controversial Public Law 414, the Immigration and Nationality Act, is explored in this TV "See It Now" subject.

**The Longer Trail** mp NFBC 30min sd b&w \$120. Young Alberta Indian, discharged for light duty from TB hospital, finds prejudice serious hurdle to his adjustment. SH C A

**Not Left to Chance** mp EFLA 20 min b&w \$100. Indiana University role-playing techniques demonstrate road to concerted action on community projects. SH C A

**Not One Shall Die** mp UJA 29min sd b&w free. Young Jewish doctor, fleeing authoritarian terror, encounters a refugee Jewish Egyptian family on their way to Israel. SH A

**Princess in the Tower** mp CONTEMPORARY 22min sd col \$135 r\$7.50. Introduces children to the fundamentals of intergroup education in terms they can understand; provides a good starting point for discussions of human relations. The story of a newcomer in town and how she turns from a lonely outsider into one of the gang.

**Sociology Series** 5 mp MH ea 15min sd. **Social Class in America** illustrates the factors that determine social class by showing the lives of three boys from these classes; **Cooperation, Competition, Conflict** shows how these fundamental social processes operate in the functioning of society; **Beginnings of Conscience** traces social forces related to conscience; **Our Changing American Family** depicts changes in the last 75 years; **Age of Specialisation** describes increasing specialization of labor since 1900 and the attendant economic and social changes.

**Unlearning Prejudice** mp ADL 30 min sd b&w r \$1.00. Kinescope of "Open Mind" TV show featuring Elmo Roper, Marie Jahoda, Benjamin R. Epstein, Richard D. Heffner, moderator. ADL audio-visuals used. A discussion starter. Sh, C, A.

**The Yellow Leaf** mp MH 30min sd b&w. Grandmother overhears daughter-in-law complain of disruption of her home routines, consents to go to a home for the aged. A

## MAKE SURE YOU GET EVERY MONTHLY ISSUE

Not a subscriber — yet? Subscription running out? Just as this August issue is a surprise bonus for all our subscribers, we've got lots of pleasant A-V "firsts" up our sleeves. SCREEN & GUIDE is on the move — to bring you a **complete** audio-visual magazine . . . one you can't afford to be without.

So — if your subscription has expired, if it's going to expire, or if you're a new subscriber, clip and return this coupon **today**. You'll be glad you did.

# Looking for Something New?

HERE IS YOUR **KEY TO THE**  
AUDIO-VISUAL RELEASES OF 1957-1958

## The **BLUE BOOK** of Audio-Visual Materials

● **films**

the **ONLY** source-book that completely correlates  
all four principal types of instructional materials

● **filmstrips**

● **slides**

**Costs Only \$1.00**

● **recordings**

Not only does the BLUE BOOK tell you where to get 16mm films; it also tells you where to get 35mm filmstrips, slide sets, and educational recordings.

The new BLUE BOOK lists all these major types of teaching aids under the same subject heads. The listings include: title, type of material, length, silent or sound, color or black and white, television clearance, sale and/or rental price, primary source of distribution, release date, content description, and recommended age level.

The BLUE BOOK lists materials on virtually all subjects — agriculture, armed forces, arts and crafts, cinema arts, education, entertainment features in many languages, personal and vocational guidance, health and safety, home economics, industry, transportation, industrial arts, languages and language arts, literature and drama, mental health, mathematics, science (physical, biological, general, medical and allied), physical education and sports, social studies (geography,

history, anthropology, government, social problems) and many more. No matter what your field of interest, the help you're looking for is in the BLUE BOOK.

For more than 30 years the BLUE BOOK has been the desk-top reference and work-book of leading audio-visual education administrators. Its first 28 editions, revised annually, were cumulative, those following list only the new releases of their year. This year, again, the Blue Book issue lists, classifies and indexes the new offerings released during the past academic year. Every subscriber gets the BLUE BOOK — and a great many extra copies are sold for all-year reference use in film and other libraries. A-V administration offices, research and production centers, in short — everywhere that accurate release data is needed quickly, handily, constantly! *This makes the annual BLUE BOOK issue a doubly useful one for our subscribers — and, consequently, for our ADVERTISERS.*

### An Ideal Combination

To keep your BLUE BOOK up-to-date, each monthly issue of EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE now carries a special section of listings of new audio-visual materials presented in the same helpful format as in the BLUE BOOK. A year's subscription to the magazine costs \$4.00; the annual BLUE BOOK issue costs \$1 each; and the 28th (separate cumulative book) edition that makes your file complete is priced at \$2.00.

**Fill Out  
and Mail  
this Coupon!**

**Take advantage of this  
combination offer**

**EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE**  
2000 N. Lincoln Park West, Chicago 14, Ill.

Check  
these 10 points  
in selecting  
16 mm sound  
projectors

QUESTION	WHY THIS IS IMPORTANT
1 Does it have color-coded threading?	<input type="checkbox"/> Makes threading and operating fast and simple, even for beginners.
2 Does it have safety film trips?	<input type="checkbox"/> Stops film movement instantly in case of film emergency. Guards against costly film damage.
3 Does it have Hi-Lite optical system?	<input type="checkbox"/> In connection with Mark II shutter, throws 38% more light on the screen. Assures bright pictures even in hard-to-darken rooms.
4 Does it have stationary sound drum?	<input type="checkbox"/> Assures clear, smooth sound. Has no moving parts to get out of adjustment. Scans full
5 Does it have visible one-spot oil system?	<input type="checkbox"/> Transparent filling tube shows oil level. Reservoir automatically feeds oil to all points as needed.
6 Are both reels mounted on top of projector?	<input type="checkbox"/> No overhanging reels to present a "traffic hazard." Projector can be set up on any level
7 Does it have single drive sprocket?	<input type="checkbox"/> Eases film stress, because same sprocket controls film entering and leaving projector.
8 Does it have compensating film shoes?	<input type="checkbox"/> Automatically adjust themselves to varying film thicknesses. Guard against splices catching.
9 Does it have 180° swing-out lens?	<input type="checkbox"/> Facilitates threading and cleaning of both aperture and film channel.
10 Is it adaptable for magnetic recording?	<input type="checkbox"/> Complete magnetic recording on film and playback can be added at any time by simply connecting Victor Magnesound.

**ONLY VICTOR OFFERS SO MANY IMPORTANT FEATURES**

The above 10 points give a quick picture of the advanced features you should expect in a modern 16 mm sound projector. Only a Victor brings you *all* of them. And with every Victor you also get the "standard" features of all quality sound projectors, including 2 speeds for sound and silent film, still picture, and reverse projection.

Particularly important is Victor's new red, white and blue color-coded threading. Color lines on projector clearly show where to thread and the sequence of threading. Other time-proven features—exclusive with Victor—are safety film trips, top-mounted reels, and power rewinding with no change of belts or reels.

Victor was first to develop 16 mm projectors and through the years Victor has been first to perfect improvements that assure finest pictures—finest sound—easiest operation. Victor long has been the choice of A-V experts in 73 countries.

**Victor Assembly 10** — Lightweight projector for small audiences. Amplifier operates at 10 watts continuous output, 18 watts peak. Available with 9" speaker, top-mounted and fully baffled—or separately cased 12" speaker as shown.

**NEW VICTOR VIEWER**

The first professional 16 mm viewer with "frame counter" priced under \$100. Large 3 1/4" x 4 1/4" screen is brilliantly lighted by 75-watt lamp. Equipped with f2.8 triplet lens. All optics coated.

LEVOLOR A-V  
(AUDIO-VISUAL)  
BLINDS

OPAQUE

GIVE YOU  
THE DEGREE  
OF DARKNESS  
YOU NEED

Many factors influence the instructor in determining how dark the Audio-Visual Room should be: the type of equipment in use, the size of the audience, the age level, whether the picture will be in black and white or color, etc. With Levolor Audio-Visual Blinds you can always enjoy the degree of darkness you desire. Furthermore, Levolor Audio-Visual Blinds enable the in-

structor to change the room from maximum darkness to a soft diffused light—in a matter of seconds—all by an adjustment of the venetian blind slats.

It is, therefore, simple to understand why Levolor Venetian Blinds are specified for Audio-Visual Rooms across the nation. *For full details and specifications write to LEVOLOR-LORENTZEN, INC., 720 Monroe Street, Hoboken, N.J.*

Be sure to specify

## DRAMATIC VISUALIZATIONS OF IMPORTANT SUBJECTS IN NEW CORONET FILMS

The six new films described below continue Coronet's proud tradition as the leading producer of the finest in educational motion pictures. Each will fill a long-felt need in its area . . . will increase the effectiveness of classroom instruction. Films like these set the standard by which all other teaching films are judged.

### FOR JUNIOR AND SENIOR HIGH SCHOOLS:

**English History** (two films, each one reel)

**English History: Absolutism and Civil War** and **English History: Restoration and Glorious Revolution** are the fourth and fifth films of a Coronet series which covers English History from earliest times to the enthronement of William and Mary. Each provides a wonderful background to its period, stressing dress, manners, buildings, and living conditions, as well as historical events. We see conflicts during the reigns of James I and Charles I; the overthrow of the monarchy and the establishment of the Commonwealth; the restoration of the Stuarts and the Glorious Revolution in which James II was deposed to make way for William and Mary.

### FOR INTERMEDIATE GRADES:

**Colonial Family of New France** (1¼ reels)

An industrious Canadian family on a tenant farm near the St. Lawrence in the 1700's shows us everyday hardships and pleasures. With the boy, Francois, we learn the roles of a priest, a soldier, a voyageur, and an habitant in building New France.

**Healthy Feet** (1 reel)

X-ray and animation help explain the structure of the feet, while slow-motion photography shows the function of each part in motion. Prevention of diseases and other dangers through care of the feet is stressed.

**Healthy Skin** (1 reel)

Animation explains the function and structure of the skin and is utilized to examine pores, sweat glands, oil glands, blood vessels, nerve endings and other parts.

### FOR PRIMARY GRADES:

**Woodland Indians of Early America** (1 reel)

The daily life of a Chippewa family prior to European influence is observed during a turkey hunt, harvesting the staple food, wild rice, fishing in the lake, and gathering at the wigwam for the evening meal.

*Each of these films is available in your choice of either color or black and-white.*

### WRITE FOR PREVIEW . . .

if you are considering purchase, use the coupon to request preview prints of the films of your choice; or to request a list of Coronet film libraries—if you are interested in rental.

Re-entered as second-class matter October, 1953 at the post office at Barrington, Illinois, under the Act of March 3, 1879.

ENTIRE ISSUE COPYRIGHT 1958 BY THE EDUCATIONAL SCREEN, INC.

**Put "More Light on the Subject" with the**  
**NEW! School Master 750 and 500**  
**Greater Brilliance on Any Screen for More Vivid Projection**  
**of Educational Filmstrip and Slide Material**

Again, the famous School Master series offers educators a new projector series for increasing presentation effectiveness of visual material. Whether you choose the new 750 or the new 500 you are assured of the greatest brilliance ever achieved from a classroom projector. Increased brilliance—coupled with other famous School Master features—makes your choice of projectors an easy one.

All School Master projectors are completely self-contained—change from filmstrip to slides in a matter of seconds without adding or removing parts.

Whether you select the 750, 750RC, 500 or 500RC, you obtain a projector with "brilliance-ability" never approached by previous models—each projector is equipped with a new Sylvania Tru-Focus lamp, assuring you of proper lamp alignment all of the time.

The School Master 750RC and 500RC provide facility for remote control operation—permit the instructor to face the class and still maintain control of the material being projected.

The School Master 750 is priced at \$99.50; the 750RC at \$131.50; the 500 at \$81.50; and the 500RC at \$119.50. The projector illustrated shows the accessory Rewind Take-up, priced at \$7.50—fits all School Master projectors.

*For additional information on the 750, the new School Master 500 and 500 RC, and School Master accessories, please write: Dept. ES-98, Graflex, Inc., Rochester 3, N. Y. A subsidiary of General Precision Equipment Corporation. Prices include federal tax and are subject to change without notice.*

**Q:** where would I get color slides of the world's art of every era?

**A:** from the educator-recommended archives of the **AMERICAN LIBRARY COLOR SLIDE CO.!**

- ✓ 14,000 Master Slides of the World's Art in Color. 250,000 Color Slides in stock for immediate delivery.
- ✓ Slides mounted in glass and labeled, in paper mounts, or as unmounted film. (For economy buyers who mount their own, we supply film cut to fit any 2" x 2" mount or mask.)
- ✓ Selection Service: you may obtain unmounted Color Slides which you are invited to examine before placing your order.
- ✓ Unique variety of "survey course" slide packages.
- ✓ Free quality Slide Projectors given with "collection" purchases.

## SPECIAL INTRODUCTORY OFFER!

This new Art Compendium & Color Slide Reference Index contains 24 individually bound brochures covering 14,000 subjects, the world's monumental works of art from the Old Stone Age to the present. Compiled by art historians alphabetically and chronologically by classification... it's a "must" for everybody and anybody interested in art education, appreciation and creation! Complete set plus handsome binder (a \$2 value) and free sample slide - all for just \$5! Limited offer, write today!

American Library Color Slide Co., Inc.  
Dept. E, 222 W. 23rd St., NYC 11

- Please send complete Art Compendium Set, sample slide, and special binder -
  - I enclose \$5
  - Bill me for \$5 plus postage
- Please send me further information on your art slide service.

### Cover: "Picture Window"

The cover-photo this month was lifted from an article by Marion Strauss on page 470 that describes the wonderful work the Volunteer Film Association in St. Louis is doing for home-bound pupils. The VFA began as a community organization but its value and importance were recognized by the St. Louis Educational System and the two now work in close harmony to bring class-room instruction to home-bound students. It is another splendid example of the strides Audio-Visuals are making in improving American education.

### Chicago's A-V Story

No one is more qualified to present Chicago's own Audio-Visual story than James P. Fitzwater, Director of Visual Education of the Chicago Public Schools. He tells it here in an article on pages 468-69. The article describes a 55-min. presentation that has been termed by the city's visual experts, an "extravaganza" on the educational use of visual materials. The program requires the use of three 6x8-ft. screens set in a curve similar to a modified cinemascope arrangement so that three pictures may be projected simultaneously. Presentations of the program have been given for the teachers in the Americanization program in the Chicago schools and various PTA groups in the city. The article is packed with material for study and possible emulation.

### In Defense of Education

The National Defense Education Act of 1958 that is on the way to becoming law, is discussed in Paul Reed's editorial on page 462. This will be of vital interest to anyone involved in the use of audio-visuals in education; those in the teaching profession as well as industry. Paul Reed has done a nice job of boiling this law down to essentials so it will be comprehensible reading for everyone.

### Editorial Staff Change

With this September issue of Educational SCREEN, I say goodbye to all those in the A-V Educational field and turn my desk and its duties over to another. Miss Enid (Micky) Stearn will take my place here, while I go on to broaden my scope in the business end of audio-visual activities, rather than the educational. I have enjoyed this connection and all its associations and many of the friends I have made I expect to see again at future A-V Conventions. I hope that all of you who have been so kind and helpful and cooperative with me, will tender the same courtesies to my successor for I am sure she will do her level best to merit it; she comes well qualified to take over this work. So I will not really say goodbye, just hasta la vista. May we meet again.

# OVER THE YEARS

Flexalum Audio-Visual blinds will be your most economical, most practical classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT GLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of black-out and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in...less money goes out—with Flexalum A-V blinds...sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

# The reader's right

Send letters to EdSCREEN & AVGUIDE, 2000 Lincoln Park West, Chicago 14

Editor's note: Paul Reed's editorial in the June, 1958 issue of ED. SCREEN has drawn interesting response. The following letter is being passed on to readers as being indicative of the type of correspondence LOF has received since the editorial was published. The advertisement in question appeared in the April, 1958 issue of School Management, pages 53-56.

**Libbey-Owens-Ford Glass Co.**  
Gentlemen:

Please register my complaint against some of your recent advertising in a school journal with national distribution. This advertising deals with daylight in classrooms.

One of my chief problems now is daylight in classrooms—TOO MUCH DAYLIGHT!

Now I am in favor of daylight in classrooms but not as much daylight as possible. Moreover, the daylight in classrooms should be subject to easy control by the teacher at all times.

Such control should be inexpensive to provide.

Let's consider a specific school building—a new school building—a not yet used school building; but it's obsolete!

The classrooms in this building have vast expanses of glass on the upper two-thirds of the exterior walls—lots of daylight. High-priced shades have been installed to partially control the daylight.

The addition of opaque drapes (plastic or fabric) to cover this glass area would probably reduce the light in the classrooms to a level which would enable the teachers to use projected teaching materials such as films, filmstrips, slides, and flat pictures, the flat pictures being projected with that very useful piece of equipment, the opaque projector.

Yes, the drapes would reduce the daylight through the glass in the exterior walls, but—the upper third of the interior walls is also glass, and there are skylights in the roof of the corridors!

Thus the interior walls will also need opaque drapes, and the skylights will need blinds. But none of these needed drapes have been considered necessary by the builders and are not likely to be provided soon—if ever.

This building can not be used satisfactorily for teaching with modern tools of instruction such as audio-visuals or television. The building is obsolete. No doubt this situation could be found thousands of times across the country with local variations.

I suspect that the designer of this building was oversold on glass. I suspect that his client knows little about school building design and use. I further suspect that your company and/or its advertising agency knows little about school building design and use. Yet you are trying to influence the client and his architect with opinions thinly disguised as fact.

Further, it appears that none of those just mentioned above knows much about modern teaching. Or else knowing, they choose to ignore.

Has your company ever asked teachers what they would like in school buildings? Do architects ask teachers what they prefer as regards their teaching ENVIRONMENT AND DAYLIGHT? Has your company or its advertising agency consulted such school people as principals, superintendents, audio-visual directors?

I think not, and I ask, Why not? I think they should.

Very truly yours,

*William F. Daniels*

Audio-Visual Coordinator  
Crown Point (Indiana) Schools

## We Thank You, Twice!

I just had to write you concerning the July issue of SCREEN. It is a wonderful publication and makes for enjoyable reading from cover to cover. I believe that this kind of approach will be appreciated by all.

*Philip Lewis*

Director, Bureau of Instructional Materials  
Board of Education  
Chicago, Ill.

Your July Convention issue carries the real feeling of what the Convention is and does.

I believe this issue is a real service to the audio-visual field and cannot help but aid in the task of building better use of modern teaching-learning tools.

*Don White*

Executive Vice-President  
National Audio-Visual Association  
Fairfax, Va.

## WHEELIT *Makes it easy!*

**More maneuverable  
Saves heavy lifting  
Locks securely for projection**

With WHEELIT on the job, all the difficulties of handling projection equipment are solved. It steers around corners, goes up and down stairs, and handles heavy equipment safely and with ease. Is it any wonder that 49 out of 50 California audio-visual co-ordinators voted WHEELIT the best after a competitive demonstration?

### Illustrated:

Folding Wheelit C-402 (right) on steps. Fits easily into small storage-areas or car trunk.

Non-Folding Wheelit 4102 (left) for interior transportation and stationary use.

## Two Additional Wheelits Now Ready!

—the industry's most complete line

Two additional models, just announced, complete our line, including the 41-inch high level WHEELIT, the 33-inch medium height and 25-inch low level models, all with two platforms. All-steel construction (except platforms). Precision workmanship. Chromat finish. Heavy straps. Dependable locking device. Good balance. Formica-top wooden platforms absorb sound, eliminate vibration.

For information and prices, consult  
your supply dealer or write Dept. ES

NEW

NEW

NEW

# RADIANT

# LENTICULAR

# SCREENS

### FOR LIGHTED ROOM PROJECTION

Of vital importance to all users of audio-visual aids is this new and different kind of "lenticular" screen surface—the result of more than 7 years research and development work by leading optical engineers and physicists. Actual tests have definitely proven that this surface is extremely effective for projecting in undarkened or even lighted rooms where no extreme or unusual ambient light conditions prevail.

### TESTS PROVE

Special electronic testing equipment is used to check the efficiency of all reflective surfaces by Radiant's engineering staff. This equipment measures accurately light gain (brightness), percentage of fall-off, quality of reflection, and other factors vital to good projection results. The new Radiant "lenticular" surface has been subjected to these exacting tests with the following findings:

- 1 Radiant "lenticular" Screens showed a very high brightness gain with a minimum of fall-off at sides.
- 2 Radiant "lenticular" Screens provide increased brightness to an area 45° to each side of axis, thus offering a 90° good viewing area.
- 3 Radiant "lenticular" screen surface reflects colors with increased vividness and greater contrast.

THERE ARE MORE THAN 100,000 TINY LENSES on each Radiant "lenticular" screen surface—that concentrate and reflect light with maximum brilliance over a wider viewing area. This surface is fungus and flame proof and washable.

THE NEW "EDUCATOR" SCREEN—WITH LENTICULAR "UNIGLOW" . . . screen surface is available in sizes from 37" x 50" through 70" x 70". Exclusive TOEmatic leg lock, all-metal slat bar, extreme height adjustability, and many other features.

### MAIL COUPON FOR FREE DETAILS

# Have you heard?

## Summer Conference at ISNU

"Educational Limitations and Advantages of Closed Circuit T.V." was the theme of the third final day of the annual summer conference at Illinois State Normal University July 17, with Dr. Harold Wigren, N.E.A. consultant on T.V., as speaker, and Dr. Paul Wendt of Southern Illinois State University and William F. Kruse among resource personnel invited by university president Dr. Robert G. Bone. Dean Arthur H. Larsen, ISNU vice-president, chaired the all-day session, which included demonstrations at the university's new closed circuit installation, and the showing of numerous NET kinescopes.

The basic installation of one camera chain came out of Dr. "Linc" Miller's regular audio-visual budget but Dr. Vernon L. Replogel, superintendent of the university's laboratory (Metcalfe) school, gave generously of his own budget so that the initial installation includes three Dage cameras, a Holmes 16mm TV projector, a Spindler-Sauppe selectro slide projector, a Multiplexor, a Singer large screen TV giving a 12 ft. x 9 ft. picture rear-projected on a Commercial Picture Projection "Fold-fast" screen, a Perkins-Elmer zoom assembly and control, Ampex tape recorder 601-620, Shure Unidyne microphone, Dage kine-reproducer with 5" tube and a Berndt-Bach Auricon camera, and tripods, dollies, 5,000 watts of illumination and other accessories from Camera Equipment Corporation.

The university is approaching the uses of this set-up in an experimental, flexible, open-minded attitude. Its "Educational TV Research Committee" includes, besides AV Director Miller and Dean Larsen Dr. Robert H. Moore (chairman), Miss Mary Rozun (classroom teacher), Dr. Chris A. DeYoung, retiring head of the Department of Education and Psychology.

## Iowa State Holds A-V Exhibit

The A-V Archives of the Department of Audio-Visual Instruction, N.E.A., has been presented with an antique Zoetrope and approximately 100 "moving picture" bands which, mounted in the spinning rim of this "Wheel of Life," were viewed through slits and seem to move. This early ancestor of the motion picture is the

gift of Eric Johnston, president of the Motion Picture Association of America. It was made part of an exhibition of audio-visual education history on display at the State University of Iowa during July and August. Other recent accessions include a complete microfilm file of *Educational Screen & A-V Guide* for the past eight years; the 8th War Loan Report on 16mm film distribution (personal copy from the late Merriman Holtz); 28mm Pathe-scope Library film on "Potato Harvest;" MMM Demonstration Tape for Teachers; 1917 ANFA Yearbook; 1931 University of Colorado film catalog; an early 22mm motion picture and slide projector invented by Thomas A. Edison; a 28mm projector manufactured by the Victor Animatograph Company, the gift of Mr. Sam Rose, former president of that company, and approximately 100 other printed materials. Anyone having materials thought suitable for archive preservation should send details to the Archivist, Wm. F. Kruse, Ingleside, Ill.

## Korea to Have Training in Motion Picture Production

Syracuse University's Audio-Visual Center has been awarded through the university's Research Institute a two-year contract by the International Cooperation Administration for improving mass communication techniques in the Republic of Korea.

The project will be coordinated by Dr. Don Williams, director of the Audio-Visual Center, with the cooperation of the Korean government.

Announcement of the contract was made by Dr. Williams who said, "The

project will be centered on training Korean nationals in motion picture production so that they will be able to utilize the motion picture for mass instruction in the areas of agriculture, health and education."

## American Film Festival

A new American Film Festival to show the best films and filmstrips in many fields will be held in New York City from April 1 through 4, 1959, it was announced by Elliott H. Kone, President of the Educational Film Library Association and Director of the Yale University Audio Visual Center.

The Festival is expected to attract several hundred entries in the educational, cultural, religious, medical, and industrial fields. The event will be held in the Statler Hotel in New York City. Sound and silent filmstrips and 16 millimeter films will be screened and judged by panels of film jurors selected on a nationwide basis. Blue Ribbon Awards will be presented to approximately 25 category winners.

The American Film Festival is an expansion of EFLA's long-established program of film appraisal and evaluation. Although more than 3600 films have been rated by EFLA's Evaluation Project, the Association has not previously made awards. However, the lack of any national non-theatrical film festival in the past two years has been felt by both producers and users, and many requests have been made that EFLA conduct such a Festival.

Any non-theatrical films and filmstrips released in the United States during the calendar years 1957 and 1958 will be eligible for awards in the 1959 Festival. Entry blanks are avail-

Top shelf: Pictures for Zoetrope "Wheel of Life."

Bottom shelf: L to R. Foreground: more pictures for Zoetrope. Background: first model 16mm Victor Projector. Center: Zoetrope. Right background: case for Kinoscope (Edison). Right foreground: Edison 22mm Kinoscope.

*Now! You can prepare your own visual aids  
on-the-spot as easily as this...*

## EXPOSE

Place original and Ozalid paper together. Set timer. Expose.

## DEVELOP

Process exposed negative and positive film together.

## PEEL APART

... and you have it... a transparency for projection. For translucent originals, it's even simpler!

# New **Ozalid**<sup>®</sup> *Projecto-Printer Kit*

*Simple, speedy way to make transparencies for overhead projection*

There's no more need to be a photographic technician in order to prepare your own transparencies for overhead projection. With Ozalid "do-it-yourself" Projecto-Printer Kit, *anyone* can prepare on-the-spot transparencies from visual materials contained in textbooks, manuals, charts... in fact, any printed material. You can get dozens of new visual effects and colors,

inexpensively, *in minutes*. No darkroom and no trays! And this amazing new kit is completely portable.

Ozalid has set up a nationwide network of visual aids dealers to assure you of helpful advice and fresh materials. For the name and address of your nearest dealer, plus informative literature, mail coupon below.

## Bob Jones University Produces Festival Film

"The Flying Angel," a color short subject produced by Unusual Films of Bob Jones University, was selected as a United States entry in the 1958 Edinburgh, Scotland Film Festival held August 24 to September 14th. The film was chosen by the Committee on International Non-Theatrical Events (CINE) of the Department of Audio-Visual Instruction, National Education Association. "The Flying Angel" also represented the product of American colleges and universities at the Cannes Film Festival and the Paris Conference of the International Congress of Motion-Picture and Television School Directors, in May. The film describes the motion-picture production and training facilities at the "World's Most Unusual University" and was produced by cinema students under the supervision of the professionally trained faculty and staff of Unusual Films.

## Newsworthy Notes

Indiana University's color film, "The Legislative Process," is one of four being shown in the U.S. pavilion at the Brussels Worlds Fair to explain the American system of democratic government.

"Films and Television in Industry and Education" is the theme of the 84th Semi-Annual Convention of the Society of Motion Picture and Television Engineers, to be held in Detroit, October 20-24. C. E. Heppberger, National Carbon Co., is program chairman; Kenneth M. Mason, Eastman Kodak, is in charge of the equipment exhibit. Nontheatrical production will be considered in both industry and education application, there will be sessions on sound recording, studio lighting, television practices, and 16mm intermediate color negative.

The Wisconsin State Historical Society has set up a "Mass Communications History Center" at its headquarters in Madison. It covers press, radio, television, movies and public relations, and to some degree parallels the A-V Archives collections at Iowa City. An exchange of catalogs is planned.

School and College sessions of the 46th National Safety Congress and Exposition will be held in Chicago Oct. 20-24 at the Morrison Hotel. Information may be obtained from Wayne P. Hughes, director, School and College Div., National Safety Council, 425 N. Michigan Ave., Chicago 11, Ill.

The Frank Spindler Graduate Scholarship in Audio-Visual Education, sponsored by Encyclopaedia Britannica Films, Inc., in memory of its Virginia field representative, Frank Spindler, who died in an auto accident in 1956, has been awarded by the University of Virginia to Mr. Paul Spencer Flynn, of Oakton, Va. This is the second year the university has been given this A-V education grant.

The Audio Visual Coordinators Association of Minnesota in cooperation with the State Department of Education, held an Audio Visual Leadership conference at the M. I. Smith ranch on Clearwater Lake near Chisholm, Minnesota. This is the first conference of what is planned to be an annual affair. The Conference is designed to be a training and planning seminar that will encourage activities and develop goals for the State AV Program.

The new officers for the 1958-59 year are Dudley Parsons, AV Director Minneapolis Schools, President; Curt Lehman, AV Director South St. Paul Schools, Vice President; and Wesley Grabow, AV Materials Advisor University of Minnesota, Executive Secretary-Treasurer.

## Film Industry Loses Leader

Dr. David J. Goodman, president of David J. Goodman, Inc., 245 Fifth Avenue, N. Y., producer of still filmstrips used as visual aids in education, died August 20th in Maimonides Hospital at the age of 45. He had been ill for nine weeks.

Dr. Goodman held B.A., M.A. and Ph.D. degrees from the New York University and was educational supervisor to an audio-visual project of the City Board of Education. His life had been active and very productive. He was executive director of Foley & Edmonds, producers of educational still films, and subsequently headed the audio-visual division of Popular Science Publishing Co. He was to later enter independent film-strip producing and throughout the balance of his life contributed much to the effectiveness of pictorial aids when used in teaching safety education to elementary school pupils.

## People in the News

New York, N. Y.: A. John Platt was recently made Manager of Audio-Visual and Sound Sales at Radio Corporation of America, according to a statement made by M. J. Yahr, Manager, Audio Products Sales, RCA Industrial and Audio Products Department. In his new position, Mr. Platt will have charge of the sale of audio-visual products. Before his appointment to the new post, Mr. Platt was Manager of Theatre Equipment Field Sales. He is also advisory member of the Standards Committee, Division of Audio-Visual Instruction, National Education Association, and a member of the Society of Motion Picture and Television Engineers.

Salt Lake City, Utah: J. R. Morton, dean of the University of Alabama Extension Division, has been named the new president of the National University Extension Association, succeeding Ernest E. McMahon of Rutgers University, New Brunswick, N. J. Mr. Morton, active in NUEA affairs for the past decade, has been with the University of Alabama since 1944. He holds degrees from Southwest Texas Teachers College, University of Texas and Columbia University. The NUEA has 78 member institutions across the nation, all dedicated to the extension of campus facilities and personnel to serve the people.

Syracuse, N. Y.: Dr. Don Williams, former director of the Syracuse University Audio-Visual Center, was elected co-vice president of the International Congress of Schools of Cinema and Television, at the last general assembly held in Paris recently. Formal approval of Dr. Williams' election came from the national schools of cinema, representing 14 countries, that hold memberships in the Congress. Sharing the office of vice president with Dr. Williams is Alexander Groshev, director of the National Cinema Institute, Moscow.

Wilmette, Illinois: Maurice B. Mitchell, president of Encyclopaedia Britannica Films, Inc., was awarded the honorary degree of Doctor of Laws at the summer commencement of the University of Denver by Chancellor Chester M. Alter. The citation, accompanying the degree, praised Mitchell for "his creative, forceful and dynamic stewardship in the increasingly vital field of audio-visual teaching" and his "myriad contributions to the communications industry." Major recent accomplishments of Britannica Films under Mitchell's direction have been the creation, for the first time in educa-

tional history, of complete courses on film. A 162-page lecture and demonstration filmed course in elementary physics, produced by Britannica Films, will be used in more than 500 high schools across the nation this year.

Chicago, Illinois: Ralph Creer of Chicago, was one of less than six Americans invited to speak at the International Film Festival in Edinburgh, Scotland, in August. Mr. Creer, who is Director of Motion Pictures and Medical Television of the American Medical Association addressed an audience of health educators and motion picture producers on the subject of "The Use of Health Films in the United States." He also addressed the faculty of the University of Edinburgh School of Medicine on "Motion Pictures and Television in Medical Education." Following this, he conferred with the motion picture committee of the British Medical Association in London and with members of the medical section of the International Scientific Film Association.

Opelika, Alabama: Robert Sackman, vice-president and general manager of Ampex Corporation, Redwood City, Calif., was recently made a member of the board of directors of ORRadio Industries, Inc., it was announced by J. Herbert Orr, founder and president of ORRadio.

Mr. Sackman is the second Ampex official to be elected to ORRadio's board; George I. Long, Jr., Ampex president, was for the past year an ORRadio director.

ORRadio, as a leading manufacturer of magnetic recording tape and Ampex, as a leading manufacturer of magnetic recording equipment, recently joined forces with Ampex acquiring 27% interest in the Alabama firm.

## Calendar of Coming Events

- Oct. 1-4—PSA Silver (25th) Anniversary Convention, Philadelphia, Pa.
- Oct. 14-17—National Association of Educational Broadcasters, 34th annual Convention, Omaha, Neb.
- Oct. 20-24—National Safety Congress and Exposition, Morrison Hotel, Chicago, Ill.
- Oct. 20-24—SMPTE 84th semi-annual Convention, Detroit, Mich.
- Nov. 21-22—San Diego (Calif.) State College, annual fall A-V conference, Audio-Visual Association of California, Southern Section, Gladys Rohrbough, Executive-Secretary, 801 S. Lorena St., Los Angeles 23, Calif.
- April 1-4, 1959—American Film Festival, New York City

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. **\$7.50.**

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. **\$7.50.**

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. **\$7.50.**

**The Glass Slipper** — The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. **\$7.50**

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. **\$7.50.**

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defae classic, based on the United Artists screen version. **\$7.50**

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. **\$7.50**

**Romeo and Juliet** — Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. **\$7.50**

**Columbus** — Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. **\$3.50.**

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. **\$7.50.**

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. **\$7.50**

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. **\$7.50.**

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. **\$6.00.**

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

10 Brainerd Road, Summit, New Jersey

# 1958 NATIONAL AUDIO-VISUAL

## 18th Annual NAVA Convention

NAVA has announced registration at the 18th National Audio-Visual Convention and Exhibit, July 26-29, was about even with the 1957 meeting. There was a slight drop among groups other than the National Audio-Visual Association, but this decrease was offset by a slightly higher attendance among A-V dealers, manufacturers, producers, distributors and other trade and industry personnel.

Convention action praised NAVA's year-old program for national and local-level public relations activities for the audio-visual field. A resolution was adopted singling out Don White, executive vice-president of NAVA, and Henry C. Ruark, Jr., Director of Information, for "furnishing information and materials required to be used in NAVA's public relations program in a most efficient manner." The national staff was also commended for its part in furnishing public relations information this past year.

Two new AVCOPI publications were introduced at the Convention this year; they were "Launching Your A-V Program" and "A-V On The Air." A-V ON THE AIR, outlines simple and effective ways to use radio and television to communicate the A-V story to state and local levels. The booklet was prepared for the Commission by Harold E. Hill, associate director of the National Association of Educational Broadcasters. LAUNCHING YOUR A-V PROGRAM is a guide for school administrators in setting up an A-V program in public or private schools. It was prepared by the Audio-Visual Leadership Council of New Jersey and the Audio-Visual Directors of Ohio, under the leadership of William King, A-V Supervisor of the New Jersey Dept. of Education.

Another resolution praised Eastman for its contribution on the Commission's first visual presentation, "THE CASE OF THE CURIOUS CITIZENS."

New NAVA officers named at the Convention this year were as follows: P. H. Jaffarian, President; William W. Birchfield, Chairman of the Board of Directors; W. G. Kirtley, first Vice-President; Rev. Harvey W.

Marks, second Vice-President; Malon Martin, Secretary, and Harold Fischer, Treasurer. The new Chairman of the National Institute for Audio-Visual Selling is Al Hunecke of the DuKane Corp.

P. H. Jaffarian, new president of NAVA (right) looks on as Bill Birchfield (retiring president, left) holds gavel received from Morrison Hotel president, W. H. Rubin.

Jasper Ewing, Sr., oldest active member of the National Audio-Visual Association and a past president, was honored by a special resolution and the presentation of a plaque commemorating his service.

## Report On The EFLA Conference

The theme of the 15th Annual Conference of the Educational Film Library Association that took place on the 25th of July, 1958, was — "EFLA's Crystal Ball. . . A Look at the Past, the Present, and the Future." Erwin Welke, EFLA's President and Audio-Visual head of the Extension Service at the University of Minnesota, used this theme as the keynote of his opening address in which he summarized the early years of the organization and its struggles and accomplishments.

Many new films were shown, among them the prize-winning *N. Y., N. Y.*, experimental film by Francis Thompson which won a medal at the Brussels Festival.

Dr. F. A. White of the Bureau of Audio-Visual Instruction at the University of Wisconsin was EFLA's Conference Chairman. He briefed the participants in the various panels and discussion sections to be held.

Discussion sections dealt with the use of audio-visual materials to enrich the program for the gifted child; the development of audio-visual courses in library schools; the use of films to bring new patrons to the public library or art museum; and the use of films in Industry, both in human relations and in technical training.

Dr. Maurice Iverson of the University of Wisconsin was chairman of a

Registering for the EFLA sessions are Dr. Seerley Reid, Chief, Visual Education, U. S. Office of Education; Julien Bryan, famed documentary film producer; Carson Graves of Syracuse University; and Beatrice Simmons of the Illinois Dept. of Education.

# CONVENTION

film evaluation panel and discussions came from the floor. Films shown ranged from the primary level story-telling film LENTIL to the advanced high school or college level films SCIENCE OF THE SEA and ART IN THE WESTERN WORLD.

New members elected to the EFLA Board were as follows: Colleges and Universities, Elliott Konec, Yale University (re-elected); Marie McMahon, Visual Aids Department, Battle Creek Schools, Battle Creek, Mich.; Margaret Divizia, Director of AV Education, Los Angeles City Schools (replacing Helen Rachford); Galon Miller, South Bend, Ind., Schools (replacing Garret Weathers); Charles Bushong, World Affairs Center, Foreign Policy Association, New York City, General and Adult Education.

The announcement of new officers was as follows: President, Elliott Konec, Vice President, Galon Miller, Secretary, Mrs. Carol Hale, Girl Scouts of the USA.

A visual summary of the Conference was given by Neville Pearson of the College of Education at the University of Minnesota. The annual Business Meeting concluded EFLA's Conference.

**EFLA Discussion Group.** L. to R: John Flory, Eastman Kodak Co., Mrs. Marion A. Born; LeRoy A. Born, AT&T Co.; H. A. Tollefson, Louisville Free Public Library; C. Walter Stone, University of Illinois; F. A. White, Associate Professor, and Director of Bureau of Audio Visual Instruction, Univ. of Wisconsin.

John Dostal, acting as Presiding Justice of the Court of Last Retort, refers a knotty problem to a Consulting Justice of the Court. The Court was the climax of the NAVA Convention program, with leading figures in the industry, their identities hidden through use of the shadowgraph technique, replying candidly to controversial questions thrown at them by audience members.

New NAVA Board of Directors pauses during first session for traditional portrait. Seated, l. to r., Eloise Keefe, Eleanor Bell Humston, Harvey Marks, Jeff Jaffarian, Bill Kirtley, Bill Birchfield, Ruth Walsh; standing, l. to r., James Bell, Don White, Bob Abrams, Peter Allinger, M. G. Gregory, E. F. Burke, M. H. Martin, Ty Sidener, Hal Fischer, J. H. Orth, Earl Harpster, Mackey Barron, named to replace Harrison Harries who resigned because of illness, is not shown.

Religious A/V Conference. L to R, Dr. John W. McCracken, Moderator; Mrs. Mae Bahr, Religious Film Library, Chicago, Chairwoman; Mr. Wesley R. Doe, Baptist Film Library, Chicago.

# OUR GREATEST OPPORTUNITY

As these words are being written, the National Defense Education Act of 1958 has not yet become law. It has been passed by both the Senate and the House of Representatives, and the differences between the two bills are being resolved in Committee. When this Act becomes law, everyone concerned with audiovisual programs in our schools will have new and graver responsibilities.

For one thing, funds in large quantities are going to be available for the purchase of audiovisual materials and equipment. For the next four years, hundreds of thousands of dollars are to be used for the "acquisition of laboratory and other special equipment including audiovisual materials and equipment . . . suitable for use in providing education in science, mathematics, or modern foreign language, for use in elementary or secondary schools or both."

This is only part of the legislation, but it is by far the most important part for us who have long known the importance and value of audiovisual materials and equipment. It is a tremendous stimulant to school audiovisual programs that perpetually have been handicapped for lack of funds. But this is no windfall to be recklessly spent for just more equipment and materials. These are funds that must be spent to **improve instruction.**

In the extended hearings preceding the passage of this legislation, Members of Congress were convinced of the place of audiovisual materials in improving instruction. They knew that American education must be strengthened to meet national needs. They focussed their attention upon the necessity for encouraging "an improvement in the teaching of science, mathematics, and modern foreign languages." Then they voted "aye" that audiovisual materials and equipment should bear a part of the responsibility for doing this job.

Funds are to be made available to the States on a matching basis. Each State has an immediate responsibility for developing its plans. Each State must decide upon the principles, the standards, and the procedures,

for its use of equipment funds to carry out the purposes of the Act. This provision challenges the audiovisual leadership of our local communities and states, as it has never been challenged before. AV leaders must work closely with science, math, and foreign language leaders to make sure that the equipment and materials recommended will be those likely to improve instruction. Educators will be accountable for the improvement of instruction. We who are audiovisual educators must make sure that plans in each and every one of the states include the acquisition of audiovisual materials and equipment that will improve instruction.

The National Defense Education Act of 1958 is more than an appropriation of equipment funds. It is a complex law calling for several distinct programs, including student loans and scholarships, all aimed toward strengthening the national defense through education. Two other parts of the Act have special significance for audiovisual people. One of these provides for contracts with institutions of higher education for advanced training in the use of new teaching methods and instructional materials for modern foreign language teachers. The Act also provides for a program of extensive "research and experimentation in the more effective utilization of television, radio, motion pictures, and related media for educational purposes."

Audiovisual educators and the whole audiovisual industry may be just a little bit stunned by the significance of the National Defense Education Act. We should recover quickly, however, and begin to work determinedly to make the most of this greatest opportunity to prove the values of audiovisual materials and equipment. And in our zeal we shouldn't forget how fortunate we are to have such people as Anna Hyer and Don White and Hank Ruark and Irv Boerlin in Washington to represent us and keep us informed.

*Paul C. Reed*

# MORE HOURS OF USE PER DOLLAR

with the Kodak Pageant Projector, AV-085

1) NO UNTIMELY interruptions of your 16mm film schedules because of breakdowns caused by improper oiling. The Pageant Projector is lubricated for life.

2) YEARS OF USE without replacement is provided by the new pulldown tooth of tungsten carbide. Tested more than 2000 hours, it evidenced no grooving.

3) NO MUSS, FUSS, or lost time in setting up. With folded reel arms, attached drive belt, and printed film path, your Pageant Projector is ready to go on a moment's notice.

What's it all mean? That the Pageant AV-085 is the projector that's always ready to go on with the show. Cost? Just \$439!\*

P.S. Naturally you get sparkling, detail-filled pictures along with full, natural sound. Why settle for less? See a nearby Kodak Audio-Visual Dealer for a demonstration. Or write for Bulletin V3-22.

\*Price is list, subject to change without notice.

EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

# NEW SYSTEM IMPROVES SERVICE

## at University of Washington Film Center

photos by The Standard Register Co.

The planning of teaching schedules to utilize audio visual materials to the best advantage has been assured under a system of order fulfillment that has been placed in effect at the University of Washington's Film Center, on the Seattle Campus.

By being completely dependable, the system in effect places at the summons of the schools of the State one of the most extensive university audio visual libraries in the nation.

The library valued at \$168,000, includes 2330 films (about 2100 titles), 360 film strips and sound film strips, 39 slide sets, and numerous transcriptions, tapes and records.

The Film Center services all of Washington, including schools and organizations of many types, and on occasions rental films are shipped to neighboring states. But the school sys-

tems of the State—including the campus—are the Film Center's first concern. The aim is to make the library's film as useful as possible to as many groups as possible. The materials are only valuable as they are used in the educational process.

In 1956, about 21,000 bookings were handled, the vast majority of which originated within the State's school systems. Allowing for a considerable variance in popularity of the films, it can readily be seen that a number of them were used many times during the year. When further allowance is made for vacation schedules and shipping time, it becomes obvious that with a great many of the films, booking is a problem that must be attacked as systematically as possible.

For the convenience of teachers and school administrators, as well as other

users, a biennial catalog is published in conjunction with two other universities in the State. In alternate years, a supplement is published. The catalog lists all the films in three libraries—those of the University of Washington, Washington State College, and the Central Washington College of Education. The three institutions comprise the Washington Film Library Association, and in their combined libraries, there is an aggregate total of more than 4000 titles.

Among these are an extremely wide variety of films ranging throughout nearly every category of education.

Users may order films by letter or on a special order form which has been made up to dovetail into the fulfillment paperwork system that speeds the job of servicing requests. Copies of the form are supplied to those who wish them, and as they are used up, they are automatically replenished. With each confirmation of a booking, a new order blank is enclosed.

Some leeway in shipping dates is provided for on the order form by including spaces for the earliest and latest possible useable dates as well as the desired date. This allows the Film Center some latitude in booking. Also it helps speed the acknowledgment by eliminating possible additional correspondence.

In no case, however, will already confirmed dates be changed. The policy is still first come, first served.

The form has spaces for the listing of several titles, with separate dates for booking for each. Shipping and billing instructions are also provided for, as are special instructions ("Vacations to be avoided, etc.").

Upon receipt of the order, a clerk in the Film Center pulls the appropriate booking card or cards from the

Orders are received by mail or by phone, depending upon whether they originate off-campus or on. Using the order form, the clerk pulls a booking card from the files. One such card is used for each film, and on it are indicated reserved dates.

**On the booking date, the desired films are pulled from the stacks and made ready for shipment.**

master booking file. These are large cards, one per film, on each of which is a pre-printed listing of all dates for an entire year.

Suitable dates for the showing—either the ones requested or those closest to them within the range of dates requested—are selected and marked off on the card to show they have been reserved.

Now the booking can be confirmed. This is done by filling out a five-part form, which serves not only as a confirmation slip, but as a packing slip, invoice, and label as well. It is also used as a schedule-pulling file and a due-back file.

The five-part sets are made up at a single typing, so all are sure to agree. This is an important element in the system. The form, designed by The Standard Register Company, is made up as a Kant-Slip continuous form, marginally punched for positive typewriter feeding and perfect registration. The marginal holes engage with retractable pins fitted in a Standard Registrator Platen mounted on the typewriter.

The forms have one-time interleaved continuous carbons, which speed up the job by eliminating carbon feeding time, and assuring clear readable reproduction all the way through.

The form is a convenient size for filing, both in users' files and the Film Center's. On it, the clerk types shipping date, date due back, catalog number, days of use, total charges, and shipping information.

The confirmation, Part 5, is removed and sent immediately to the customer. One of those forms is used for every film ordered. With it, a new order blank for future use is enclosed.

To make sure that the film will be shipped on the dates booked, the other four parts—held together by staples—are placed intact in a dated shipping file. The day before the scheduled shipping date they are pulled and processed.

Included in the set are the shipping label, packing slip, invoice, and a due-back slip.

All but the last two are used at this time. The invoice and due-back slip are filed by appropriate due-back date, making prompt follow-up automatic when materials do not arrive back on time. Sufficient transmittal time is allowed in the schedules, so delays are a rarity. All that is needed is the complete cooperation of teachers and educators.

When the film comes back to the Center, it is inspected for possible damage before being placed in the stacks. The inspector's evaluation of condition is entered on the due-back slip, which can then be used for further action if needed.

These two steps—follow-up on shipments and inspection of returned films for possible damage—are important in assuring the best possible service to all users with a maximum of fairness and impartiality.

The final step is the completion and mailing of the invoice.

This system ties all parts of the ordering, booking, and billing routines together, which is of direct benefit to the users of Film Center films and materials. Orders are handled uniformly. Having a standardized form means that all the information needed for processing will be included, and in the proper places for easy interpretation.

**The remaining four parts of the stapled set of continuous forms are pulled from the booking date file and placed with the film for shipment. The top portion of Part 1 is pasted inside the case, the lower portion is used for a label. Part 4 goes inside as a packing slip. Parts 2 and 3 are placed in a due-back file.**

# Safety Aspects of Audio-Visual

In the current nation-wide controversy over educational philosophies and methods, an undisputed achievement of American schools has been the recognition of audio-visual equipment as an essential tool of learning. In the modern school room, the projection screen is as prominent as the blackboard. Junior prepares for the push-button future by mastering the intricacies of tape recording or picture projection. Closed-circuit TV is being used experimentally as a solution in easing the burden of understaffed schools. Open-circuit television brings the classroom to the student. Clearly, audio-visual instruction is here to stay, and its influence has spread from the schools to churches, social clubs, business and industrial groups — in fact, wherever people gather together for entertainment or instruction.

The vast number of projectors, recorders, cameras, radios, and other electrically operated appliances in daily use introduces problems of maintenance and operation, and forces a consideration of safety measures. Many devices operated by inexperienced persons in crowded schoolrooms and meeting halls could present serious fire hazards if not properly safeguarded. Fortunately, local regulatory codes for building construction and electrical installation establish safety margins which eliminate many potentially hazardous situations. They can do little, however, about the equipment that is used in the buildings. Properly, the first line of defense is to build the machines to high standards of safety, thus eliminating the hazards at their source. That this is, happily, the current practice is due in large measure to the mutual efforts of the audio-visual equipment manufacturers and Underwriters' Laboratories, Inc.

This nationally known testing organization, so familiar to the American public through its widely recognized UL label or marker, has for years functioned as an independent laboratory for product and material safety testing. Underwriters' Laboratories is not a commercial testing laboratory; its sole concern is with safety through the determination of life, fire, and casualty hazards in devices and materials. The Laboratories, a not-for-profit enterprise, serves as the testing station for the National Board of

Fire Underwriters, an association of capital stock fire insurance companies. Its services are strictly voluntary. Manufacturers desiring to earn UL listing submit their products for an investigation of their potential hazards or effectiveness in fire protection. If the device meets the requirements of a rigorous test schedule, based on standards developed by the Laboratories' engineers and advisory councils, it becomes "listed" by the Laboratories and is entitled to bear the UL label or marker.

A unique and invaluable feature of Underwriters' Laboratories' service is the factory follow-up inspection program. Under this program, all listed products are subject to periodic spot-checks by UL inspectors during production. The inspectors see that the UL label is applied only to those products which continue to meet the Laboratories' specifications. Manufacturers welcome this service as a supplement to their own quality control program. Over the years of its operation, Underwriters' Laboratories has worked closely with inspection authorities, insurance companies, manufacturers, and governmental officials in the interests of public safety. Its scope of operation includes not only the testing of electrical equipment, but

also gas and oil heating equipment, air conditioning and refrigeration devices, burglary protection equipment, building materials and fire protection equipment, hazardous liquids, and other products presenting potential hazards in daily use.

In the audio-visual field the Laboratories accepts for investigation most types of electrically-powered sound and projection equipment. The vast majority of the submittals is the non-professional type equipment, in keeping with the Laboratories emphasis on the safeguarding of devices in everyday use by the technically-naive average citizen. (Not that the professional operator is any less immune from injury, but his equipment, being more complex and involving greater hazards, is recognized as such and constructed accordingly.) This includes slide and motion-picture projectors, recorders, phonographs, TV and radio receivers, amplifiers, public address and centralized sound systems, even such items as electronic organs and jukeboxes.

Electrical appliances, by their nature, tend to produce heat. If not suitably constructed, they may develop fire hazards within themselves or on combustible materials in close proximity. Design practices have long elim-

UL engineers prepare for the Impact Test on a portable TV set, to test the strength of the safety glass window protecting the picture tube. A swinging steel ball strikes the window with a force of 5 ft.-lbs. and must not penetrate into the tube.

# Equipment

by Richard H. Lucas

inated the most obvious dangers, but performance testing is necessary to ascertain that no hazards arise through daily use. This is the special province of Underwriters' Laboratories, which tests for fire hazards under normal and abnormal conditions. In addition, the appliance is closely examined for features which would cause possible shock hazards. These are the major areas of investigation; other hazards, such as the large picture tube in a TV set, are also checked in an effort to uncover all potential trouble spots.

A typical laboratory examination involving a portable phonograph or radio would be conducted under the requirements of Underwriters' Laboratories' Standard for Radio and Television Receiving Appliances. The investigation starts with a detailed study of the construction. Current-carrying components are examined to see that they comply with specifications for proper material, construction, assembly, spacing, and protection against corrosion, overheating, or accidental contact. No accessible part of the appliance should create shock hazard. This includes not only exposed parts, but also enclosed components that might be reached in servicing. To find these latter features, UL engineers probe with a steel rod (with the set disconnected, of course) through openings, and must not make contact within specified distances. Plastic materials used for cabinet, dials, windows, and similar parts, in addition, must not be highly flammable.

Audio-visual equipment in schools and clubs usually undergoes considerable manhandling, particularly portable devices which are carted from room to room and in and out of automobiles. To make certain they can stand up under daily rough treatment, UL engineers, like the man in the TV commercial, test the strength of thermo-plastic radio cabinets—only instead of dropping the radio, they use a swinging 1-lb. steel ball. The cabinet is also placed in a 200 F. oven for seven hours to see if the plastic will warp or deform under high temperatures. The engineers at this point run a heating test on radios which is typical of the practical approach taken by the Laboratories in simulating hazardous conditions. Current into a

radio set is boosted slightly to 130 volts, then the set is turned on and placed on a hot radiator for a full day! Despite the heat, the thermo-plastic enclosure must not warp, melt, or char during this drastic treatment, which frequently occurs in the home.

Once the construction has been accepted, the Laboratories' men turn their attention to operating tests. Power input is measured and compared with the marked input rating. With the set operating continuously for several hours, temperatures are taken on the device and surrounding combustible material. These are measured by thermocouples placed at various locations and with the appliance, such as a radio, phonograph, or TV set, placed 1 in. from a vertical wood surface as it might be placed against a wall in the schoolroom. Temperatures on the wood and other combustibles must be within the safety limits established by the Laboratories.

Further tests measure the ability of the electrical circuit to function safely under various abnormal conditions. Shock-hazard current, maximum voltage, and dielectric strength tests are standard. Devices of unusual design or construction must face special operating tests to find potential hazards. In these tests, cheesecloth is often draped over the unit and the components short-circuited to see if sparks or flame escape the cabinet and ignite the cloth. Because of the large vacuum picture tube, television sets are required by the Laboratories to have a safety glass window in front of the tube. The strength of the glass is determined by the impact of a swinging steel ball, and by an actual implosion of the tube. The safety glass must not shatter and allow large fragments of the tube to fly out into the room.

This has been a brief summary of some of the standard tests performed by Underwriters' Laboratories in their regular investigations of audio-visual equipment. Once the device has met the requirements successfully, notification of acceptance is sent to subscribers to the Laboratories' service. These include the principal boards of underwriters and inspection bureaus, insurance companies, and many federal, state, and municipal departments. With most devices, the general public is informed by the Underwriters' Lab-

oratories label or marker which is affixed to the product. The names of acceptable products are also entered in the annual lists of inspected equipment, which are available to the public free of charge from any of the Laboratories' testing stations.

*The UL label of the Underwriters' Laboratories is familiar to most people who use electrical appliances and equipment. However, few know just what it means, except that it has something to do with safety. The editors of EDUCATIONAL SCREEN, knowing that its readers must be especially concerned about the safety of audiovisual equipment used in schools and other public buildings, requested that this article be prepared exclusively for us by Mr. Richard H. Lucas of the Underwriters Laboratories staff. Photos used were supplied by the Underwriters Laboratories, Inc.*

An engineer measures the maximum DC voltage at the cathode of the rectifier tube during the investigation of a tape recorder.

Investigating possible shock hazards, an engineer measures the ventilating openings on a phonograph to see if additional probing tests are necessary to check accessible live parts in the enclosure.

# VISUALIZING CHICAGO'S VISUAL EDUCATION STORY

Director James P. Fitzwater (left) discusses proper projector maintenance as two of the three screens are in use.

by James P. Fitzwater

Director of Visual Education,  
Chicago Public Schools

A program concerned with visual education should be presented visually.

Basing its plans on this precept, the Division of Visual Education of the Chicago Public Schools prepared what some of the city's visual coordinators and principals have termed an "extravaganza" on the educational use of visual materials.

This fifty-five minute presentation of good audiovisual practices was designed to keep the audience on its mental toes and to illustrate that visual tools do an effective teaching job from the primary to the adult level.

The program required the use of three 6' by 8' screens set in a curve

similar to a modified cinemascope arrangement in order to provide an opportunity to project three pictures simultaneously.

Five projectors were required to handle all of the materials which have been prepared by the staff of the Division of Visual Education for the presentation. All of the materials were illustrative of the type which teachers themselves might prepare for classroom utilization. These included  $3\frac{1}{4}$  by 4 inch glass slides, 35mm colored slides, overhead transparencies, materials for the opaque projector and an eight minute motion picture.

To coordinate the various aspects of the program a carefully annotated script was written so that the operators of the projectors would know precisely when each item was to appear on the screen.

This script covered all aspects of a good audio-visual program and was

narrated by the director of the Division. The selection of the proper film or filmstrip by the individual classroom teacher was the pivot on which the entire presentation revolved. During the program the classroom teacher's role in the utilization of the sound motion picture was demonstrated with a class of first grade pupils who discuss a subject, see a film about it and then carry on with discussion and follow-up activities.

During the actual showing of the film, identical prints were run on two different projectors so that the class and the audience could observe the same film. The sound track on the "class" projector provided the narration for both groups.

Among the key items in the presentations which have been attended by principals and visual coordinators in 150 schools were overhead transparencies reproduced from the pages of "Gateway to Learning"\* illustrating the philosophy of visual education and a set of  $3\frac{1}{4}$  by 4 inch slides pointing out the values of visual education as determined by research findings.

An understanding of the value of visual aids in the classroom has long been considered of prime importance to the staff of the Division. Principals who acknowledge the role these media can play in the teaching-learning situation and who encourage good utilization on the part of their teachers are

Supervisor Emilie Lephthien and a first grade class discuss the film during the demonstration lesson.

\* Publication available from Audio-Visual Commission on Public Information, Room 2230, 250 West 57th St. New York 19, N.Y.

key figures in a good audiovisual school program. A well-informed and enthusiastic visual coordinator is also essential to the smooth operation of a school program and can influence fellow members in good utilization.

For these reasons, to each of the three presentations of the Division's story, the principals and visual coordinators in two of the city's school districts were invited. Attendance at these three presentations was approximately 450 since radio chairmen were also on hand for the program of the Division's sister organization, the Division of Radio and Television.

Utilizing the facilities of the overhead projector, visual coordinators were instructed in the easiest method of obtaining the classroom teachers' requests for films, compiling these orders and submitting them each month to the Division. Methods of providing for the flexible scheduling of equipment in the school were also demonstrated.

The 35mm colored slides illustrated these various steps as they were actually carried out in a school. At this point in the presentation the opaque projector was used to show sample forms devised to facilitate the coordinator's work and the overhead projector provided an opportunity for one of the Division's supervisors to demonstrate the procedures as they were explained by the director of the Division. Thus the audience was provided with a graphic demonstration of the "how" and "why" of a smoothly operating visual education program in a school.

In order to explain the actual work at the headquarters of the Division of Visual Education, the staff produced an eight minute color film tour of the Division's various facilities while one of the supervisors described the services and functions which are performed. When the principals and visual coordinators had an opportunity to visit — via the film — the booking department and realized that in the 1957-1958 school year more than 213,000 requests for films were handled they could appreciate the need to comply with such requests as alphabetizing call numbers, providing an alternate call number, and indicating an alternate date so that better service can be provided by the Division in supplying the teacher with the material she wants when she wants it.

The film also visited the library where 18,000 prints are stored. In the inspection department, the school representatives learned how they can facilitate the work of the Division by returning films without rewinding them, thus saving film inspection time.

**Service Manager Frank Ross operates the 2 x 2 slide projector. The 3 1/4 x 4 inch slide projector and motion picture projectors are in readiness.**

Shipping room operations were shown and the visual coordinators were told how to check in the materials at the school and why it is important to check the delivery box again before it is returned to the Division making sure that every film is returned on time. In the repair department they learned how important it is to tag all equipment properly, indicating not only the school name but the make, model and serial number of the projector and the difficulty which has been encountered so that faster and more efficient service can be provided.

And the audiences also visited the "morgue" where excessively damaged prints are stored awaiting replacement footage. How film damage can be reduced was told to the coordinators.

To present this 55 minute program it was necessary to utilize the services of the director, the two supervisors, and the service manager, and three additional assistants. In addition to the three presentations already mentioned, the program has been given for the teachers in the Americanization program in the Chicago schools and to the audio-visual chairmen of the vari-

ous PTA's in the city.

During the district presentations an opportunity was provided for browsing through exhibits of various types of projection equipment and previewing filmstrips, as well as to learn how to service projectors and replace belts, fuses, and lamps.

A separate supply table was also provided where visual coordinators could make immediate requests for replacement parts to be charged to the school's inventory of supplies.

To assist the visual coordinator the Division prepared an envelope of materials identical with those used on the opaque projector to enable the coordinator to set up an efficiently operating program in his own school. Threading charts for the various makes of projectors were also available to assist the coordinator in training faculty members and students in the operation of equipment.

Principals and visual coordinators have been enthusiastic about the value of these meetings and an improvement in film utilization practices and in the procedures followed by the visual coordinators has been noted.

**Supervisor Reynolds Hungerford (left) and assistant operate the overhead and opaque projectors.**

# School Films For Homebound Pupils

by Marion Strauss

Visual Education Dept. trucks serve twenty-four school districts in St. Louis, plus the Volunteer Film Association.

Ten year old Richard has been homebound since his accident last year. Through the home-teaching program of the public schools, a teacher visits Richard one hour every school day. She tries to give him instruction in all the subjects that he would have if he were with his fourth grade classmates at school. In geography he has been studying about Mexico. Richard's teacher is familiar with several films which would help him to understand and appreciate this country, and she wishes it were possible for Richard to see one of them.

Thus far our story might be taking place in any of a large number of communities, for the program of teaching the severely ill or handicapped child at home has developed rapidly in all parts of our country. But let us continue this story as it takes place in the Greater St. Louis area.

Richard's teacher finds "South of the Border" listed in the Division of Audio-Visual Education catalogue. She

orders it from the Volunteer Film Association. The Volunteer Film Association procures the film from the D.A.V.E. library. The Association schedules it together with a cartoon comedy and the story of a Clydesdale horse called "Big Scot," to round out Richard's sixty minute recreational therapy program. A pair of Volunteer Film Association operators show these films to Richard at his next regularly scheduled evening show. They alert him to the fact that "South of the Border" is a film which his teacher has requested.

When Richard's teacher comes the next day, he tells her about the motion picture. She and Richard discuss it together just as if she had shown it to him and his classmates in a school room. The home teacher has not used any of her limited teaching time showing the film. She has not been burdened with the handling of heavy equipment. Yet Richard has all the advantages gained from viewing, under

supervision, a carefully selected educational film.

To help understand the plan of cooperation that makes it possible for teachers of the homebound in St. Louis and St. Louis County to have appropriate school films shown in the homes of their pupils, let us briefly review the story of the Volunteer Film Association. The organization, started in 1930 by Susan Barnes and the late Marjorie Lang, is now a United Fund Agency. It is made up of St. Louis men and women who give their time on a volunteer basis to do the many and varied jobs that make possible the showing of films not only to our homebound pupils, but to invalids of all ages, in their own homes, in hospitals, and in other institutions.

Now let us see how this community organization became tied up with the schools. Even before there was a home-teaching program in the St. Louis area, the Volunteer Film Association was borrowing films from both the St. Louis and the St. Louis County Public Schools. Although this was contrary to the audio-visual departments' policy of lending films only to their own schools, it was justified in the minds of both Philip J. Hickey, Superintendent of Instruction, and Elizabeth Golterman, Director of the Division of Audio-Visual Education, of the St. Louis Public Schools, because of the large number of school-age children, homebound or hospitalized through illness or disability, who were among the patients being served by the Association. Similarly, in St. Louis County, the late Miss Alma Rogers, of the Visual Education Department of the St. Louis County Schools, cooperated in the plan.

This loan service, which began during the 1946-47 school year, has continued to date. The library of 7,200 educational films in the city and 3,500 films in the County is a readily accessible, rich source of supply that is an invaluable asset to the Volunteer Film Association. Mrs. George P. Bauer, Director of Volunteer Film Association, is most grateful that she can call upon Nelle Lee Jenkinson, in charge

**Volunteer Film Association worker helps Johnny with his study of our Southern Neighbors, by showing the film "South of the Border" which had been requested by his classroom teacher.**

of the film department of the Division of Audio-Visual Education in the city, and Lee Campion, Director of the Visual Education Department of the Cooperating Schools of St. Louis County, to help her meet any situation. Volunteer Film Association is served by them exactly as one of their public schools. They help Volunteer Film Association so that Volunteer Film Association may better help their shut-in children.

It was a logical next step for the Volunteer Film Association to offer its services to the teachers of the homebound after the home-teaching program had become securely established in the St. Louis area under state aid. In 1949 the Association, represented by Susan Barnes (now Director of the Rehabilitation Center) and the writer, cooperated with Miss Jenkinson and Clement Powers, Director of the Division of Pupil Personnel, in developing the plan to give this extra service to the school-age children on its roster. The Volunteer Film Association was then invited by John L. Bracken, at that time Chairman of the thirty cooperating superintendents of St. Louis County, to explain the plan to them at one of their monthly meetings. The program was readily put into action because the teachers were eager for the service, and because the necessary groundwork of cooperation had already been firmly established between the Association and the City and County Visual Education Departments.

Briefly, then, this is how the pro-

gram operates at the present time. Harold C. Smith, Director of Special Education, now in charge of the home-teaching program in the St. Louis Public Schools, and the equivalent personnel in the individual County School Systems supply the Volunteer Film Association with the names and addresses of the home teachers and of their pupils. Mrs. Bauer, or a member of the V. F. A.'s Home Teaching

Committee, contacts each teacher, and, if the teacher expresses an interest in the program, sends her a work kit. In the kit there is an explanation of the program and a catalogue of educational films that are in the V.F.A.'s permanent Library. These films are described and classified; and, that it may be of still further help, the catalogue is cross-indexed with the film catalogues of both city and county visual education departments. There is a referral blank to be used at the discretion of the teacher if the pupil is not already receiving the services of V.F.A., for the plan operates only when the home-taught pupil is one of the Association's patients. There are order blanks on which the teacher lists the educational films she wishes and the approximate dates on which she would like them shown. The teacher may order films from the V.F.A. catalogue in the kit or from the much larger D.A.V.E. catalogues of films which every classroom teacher has. The V.F.A. then schedules the educational films as part of the shut-in's next bi-weekly show, and her pupil becomes the Richard that our story began with.

Volunteer Film Association is happy to help the teachers in their fine work with homebound children. It is proud to be a partner in this unusual program in which a community agency of volunteer workers cooperates with public school facilities. It is eager to continue to render a service that so definitely stimulates and accelerates educational progress of the homebound pupil.

**Since Carol can't go to school, the school comes to her through the home-teaching program of the St. Louis public schools.**

New York City's Mayor Wagner has proclaimed October 5-11 "Audio-Visual Week." Here he presents the proclamation to Herbert Rosen, president of Industrial Exhibitions, Inc. Also at the ceremony, L. to R.: Ken Killian, president of the New York State A-V Suppliers Association; Phillip E. Dodge, president of the National Visual Presentation Association and Nathan Zucker, president of the Film Producers Association of New York.

# Industrial Film A-V Exhibition, October 7-10

"Sound and Vision as a Tool" is the central theme of the Industrial Film and Audio-Visual Exhibition to be held at New York City's Trade Show Building, 500 Eighth Avenue. The Exhibit period, October 7-10, has been officially proclaimed by Mayor Wagner as "Audio-Visual Week." Commercial exhibits will cover 32,000 square feet of exhibit space, divided into 97 rooms designed specially for exhibition use.

In addition to displays by manufacturers and film producers, there will be exhibits by numerous government departments, including the Army Pictorial Services Division, the Navy Training Devices Center and the U. S. Office of Education. UNESCO will show the application of many types of A-V equipment in the world-wide literacy program. The famous Irving Browning historical collection of antique cameras, magic lanterns, stereo and other forerunners of modern equipment, will be on exhibit. Exhibit hours are from noon until six, except on Wednesday when the exhibits will remain open until nine P.M.

An impressive list of commercial and educational organizations have arranged meetings and programs in connection with the Exhibition. The *National Visual Presentation Association* (NVPA) will hold workshop-seminars morning and afternoon of the opening day and a luncheon meeting at the Hotel Roosevelt, in connection with the *Sales Executives Club* of New York. NVPA has arranged for awards to be given in six classifications of visual presentation materials. . . . Point-of-Sale, Public Relations, Employee Relations, Employee Training, Sales Training and Sales Promotion. These awards will be presented at the general exhibition banquet Thursday night at the Hotel New Yorker.

The *Film Producers Association of New York* is holding its monthly meeting and dinner as well as a series of 2-hour show-case sessions on all four afternoons, at which sponsored films and sound slidefilms will be shown and discussed.

The *Industrial Audio-Visual Association* will hold its regional meeting and luncheon Wednesday noon. An Eastern Regional Seminar and meeting is scheduled by the *Magnetic Recording Industry Association* and *The NY State A-V Suppliers Association* will hold a director's conference and luncheon. *The Educational Film Library Association* Board of Directors will meet Thursday at 9 A.M.

The *Metropolitan New York Audio-Visual Association*, in cooperation with kindred professional units in New York State and Long Island, will conduct a workshop session on Thursday at 4.30 P.M., on "Television in Education." This will be under the direction of its president, Dr. Irene Cypher, Associate Professor of Education at New York University and editor of the filmstrip department of this magazine. The New York schools' own TV station, WNYE, will showcase some of its ETV work.

A total of fourteen lecture periods will be addressed by outstanding authorities in industry, education and government. EFLA will conduct a round-table discussion on "The Film Libraries and Industry" from the big Hi-Fi show ending October 4, and from the *Association of School Business Officials* which overlaps the *Industrial Film and AV Exhibition*. A total of 20,00 admission tickets have been distributed to sales and training executives, advertising manager, producers, and educational and religious A-V professionals.

## PROGRAM

### TUESDAY, OCTOBER 7TH

- 9:30 A.M. & 2:00 P.M.—National Visual Presentation Association Seminars  
12:00 Noon to 6:00 P.M.—Exhibits
- 1:00 P.M. & 4:00 P.M.—Film Producer's Association Showcase of Sponsored Films
- 2:00 P.M.—KENNETH H. GODDARD, Manager, Audio-Visual Services Department, United States Chamber of Commerce: "SIMPLE AUDIO-VISUAL TECHNIQUES FOR ORGANIZED BUSINESS"
- 3:00 P.M.—R. A. MAURER, Technical Advisor, Motion Picture Department, International Business Machines Corporation: "IN-PLANT PRODUCTION OF MOTION PICTURES"
- 4:00 P.M.—JAMES A. MOSES, Chief, Film Distribution & Utilization Branch, Army Pictorial Service Division: "THE A-V PROGRAM IN THE ARMY — ITS DISTRIBUTION & UNUSUAL TECHNIQUES"
- 5:00 P.M.—KEITH CULVERHOUSE, Director of Sales Presentations, Television Bureau of Advertising, Inc.: "FILM & SLIDES — RIGHT OR WRONG"

### WEDNESDAY, OCTOBER 8TH

- Noon to 9:00 P.M.—Exhibits  
Noon—Industrial Audio-Visual Association Luncheon and Regional Meeting
- 1:00 & 6:00 P.M.—Film Producers' Association Showcase and Conference on Sponsored Films
- 2:00 P.M.—LT. COLONEL C. S. BAUER, USAF, Chief, Audio-Visual Aids & Manuals Branch, Special Training Devices Division: "THE USAF IN-SERVICE MOTION PICTURE PRODUCTION PROGRAM"
- 3:00 P.M.—RICHARD T. CARTWRIGHT, Naval Aircraft Maintenance Training School Director, Grumman Aircraft: "THE USE OF A-V IN INDUSTRIAL EDUCATION"

This cartoon was drawn by Rich Davis, son of past president Alnsley Davls.

4:00 P.M.—LAURENCE K. HAMILTON, Vice President in charge of Sales, Technifax Corporation: "COMMUNICATION AND HUMAN RELATIONS"

5:00 P.M.—ROBERT P. ABRAMS, Vice President, Williams, Brown & Earle, Inc., Philadelphia, Business & Industry A-V Council, who will conduct: "A ROUNDTABLE SESSION ABOUT THE USE AND APPLICATION OF DIFFERENT AUDIO-VISUAL TECHNIQUES IN INDUSTRY"

7:00 P.M.—R. R. POMEROY, Head of the Visual Projects & Recordings Branch and E. B. NOWICKI, Audio-Visual Division Head, U. S. Naval Training Device Center: "AUDIO-VISUAL ENGINEERING-MILITARY TRAINING"

#### THURSDAY, OCTOBER 9

9:00 A.M.—Educational Film Library Association Board Meeting

Noon to 6:00 P.M.—Exhibits

Noon—Magnetic Recording Industry Association luncheon and meeting

1:00 to 4:00 P.M.—FPA Showcase, Sponsored Films

2:00 P.M.—Roundtable Session, presented by Members of the EDUCATIONAL FILM LIBRARY ASSOCIATION: "THE FILM LIBRARIES & INDUSTRY"

3:30 P.M.—R. C. RHEINBECK, Chief Engineer, C.B.S. News: "MAGNETIC SOUND IN 16MM FILM PRODUCTION"

4:30 P.M.—Workshop sessions sponsored by the Metropolitan Audio-Visual Association in cooperation with the Long Island Audio-Visual Association and the New York State A-V Council under the supervision of DR. IRENE CYPHER, A-V Director, New York University: "TELEVISION IN EDUCATION"

7:30—Banquet — Hotel New Yorker

#### FRIDAY, OCTOBER 10

12:00 Noon to 6:00 P.M.—Exhibits

12:00 Noon—New York State A-V Suppliers Association Luncheon and Meeting

1:00 P.M. to 4:00 P.M.—Film Producers' Association Showcase and Conference on Sponsored Films

2:00 P.M.—ARTHUR GAGLIOTTI, Deputy Representative to the United Nations — U.N.E.S.C.O.: "AUDIO-VISUAL METHODS IN INTERNATIONAL RELATIONS"

3:00 P.M.—LAURENCE K. HAMILTON, Vice President in Charge of Sales, Technifax Corporation: "THRUWAYS TO LEARNING"

4:00 P.M.—CHARLES E. LUMINATI, Director of Audio-Visual Services, Great Neck Public Schools: "THE TECHNIQUES OF MODERN A-V EQUIPMENT AND UTILIZATION IN INSTRUCTIONAL MATERIALS"

TO GET THEIR  
ATTENTION  
AND HOLD IT...

The 310 Ekotope eliminates the unchangeable "canned" presentation, since tapes can be erased and re-recorded, or cut and spliced, to correspond to changes in slides or film sequence.

NEW 310  
**Ekotape**<sup>®</sup>

with AV CONTROL CENTER

Break the spell and you lose attention. In audio-visual presentations with the new 310 Ekotape, sight and sound are always together. There's no "next slide, please," no "beep" or tone signals — nothing to divert young minds. The 310 recorder with the amazing AV Control Center perfectly times your tape with the projector. Automatically! Inaudibly!

And it's so simple. Pressing a button on the Control Center records the signal at the proper points on one half of the tape. On playback, a special amplifier converts the control signal into electrical energy which operates the automatic projector.

Ideal for the classroom — even student operators can run off a perfect presentation every time.

See yellow pages for your nearest Ekotape dealer —  
the man from Webster.

## ART IN THE WESTERN WORLD

(Encyclopaedia Britannica Films, 1150 Willmette Avenue, Wilmette, Illinois.) 30 minutes, 16mm, sound, color, 1958. \$390. Teacher's guide available.

### DESCRIPTION

*Art in the Western World* surveys the works of masters of painting and sculpture from the thirteenth century to the early twentieth using illustrations from the collection in the National Gallery of Art in Washington, D. C.

As the camera illustrates the major movements in art, the narration explains them. This survey begins with examples of the Byzantine style, such as *Enthroned Madonna and Child*, painted around the year 1200, representing a tradition nearly one thousand years old. The formal religious art with its lack of the realistic was prescribed by the church. About one hundred years later efforts to bring a little realism into painting are illustrated by the works of Duccio, *The Calling of the Apostles Peter and Andrew*, and Giotto, *Madonna and Child*.

These two Italians occasioned a new dimension which artists imitated for another hundred years.

The Renaissance brought new realism, depicted by Gozzoli's *The Dance of Salome*, and Angelico and Lippi's *Adoration of the Magi*. Castagno conveyed the impression of motion in his *The Youthful David*. In sculpture, Verocchio revealed traits of character of the stern ruler of the city of Florence with the image of *Florenzo de' Medici*. Raphael took Renaissance painting to its summit, and his *St. George and the Dragon* and *Alba Madonna* are shown in the film. El Greco in the early seventeenth century showed himself a master. *Laocoon* is presented as an example of his work.

Next, the Northern style of Renaissance painting with its precision and detail are exemplified in Van Eyck's *The Annunciation* and Weyden's *Portrait of a Lady*. Holbein shows in his *Edward VI as a Child* the German style of concise recording of fact. Portrait painting attained a special place among the arts in the seventeenth century. *Pope Innocent X* by Velasquez and *Philip, Lord Wharton* by Van Dyke illustrate this area of concentration. During this period there emerged a giant—Rembrandt who used light to focus attention on the important parts of a picture. This technique is demonstrated in *Self-Portrait*,

*trait, The Mill*, and *Descent from the Cross*.

A change took place in western art during this century as the center of fashion and wealth moved to Paris. It was a light-heated world of make-believe and grace which carried on into the eighteenth century. Boucher's *Venus Consoling Love* and *Madame Bergeret* convey this spirit. Goya's work reported the facts and faces of the crumbling Spanish Empire in *Senora Sabasa Garcia* and *The Marquesa de Pontejos*. During the eighteenth century English art sought to perfect the irregularities of nature in portrait and in landscape. Constable's *A View of Salisbury Cathedral* and Turner's *Keelmen Heaving in Coals by Moonlight* are examples of this endeavor. The English style strongly influenced the American painter. This influence is in the American works *The Washington Family* by Savage, *Colonel Guy Johnson* by West, the Father of American Painting, and *The White Girl* by Whistler. Some examples of the works of West's pupils are also shown. The development of an independent American realism is given in Homer's *Breezing Up*.

Impressionism came on the scene in the later years of the nineteenth century. This style was based on the theory that what is actually seen in nature consists of nothing more than minute flecks of color a painter could duplicate with a web of brilliantly colored brush strokes which, from a distance, fuse in the eye to form an image. Impressionism is exemplified in Renoir's *A Girl with a Watering Can*, Monet's *Venice, Palazzo de Mula*, and works of Pissarro, Degas, and Lautrec.

A new group in Paris called the post-impressionists searched for new ways of expressing the mood of their time. VanGogh's *La Mousme*, and Gauguin's *Self-Portrait* represent this movement.

### APPRAISAL

The evaluating committee feels that this film will be of interest to college students in introductory classes of art history and to senior high school students in art appreciation. *Art in the Western World* helps the viewer understand how each work not only reflects the character of the artist but

## TAKE A-V INSTRUCTION TO THE "HOME BOUND"

• DUOLITE MODEL DU6

Audio-visual instruction need not be denied to pupils absent from school for extended periods. The small, light weight Duolite DU6 makes it easy to take 16mm sound motion pictures into a home, any time.

Weights only 25½ lbs. Completely self contained in a 10½" x 17" x 13" case. Built in, TV-type, folding screen gives a fine picture in undarkened rooms. Conventional projection, in darkened rooms, requires only the flip of a tiny mirror.

also how it is related to his cultural background and the mood of the period in which he lived. Inasmuch as the illustrations of the styles were taken from the National Gallery of Art, several of the major artists such as Da Vinci and Michelangelo are not represented. Since the film is a survey, it is very general and has no further application than to serve as an introduction to art. The photographic technique of seeing the pictures in their entirety and then focusing on small parts of the works helps the viewer to appreciate some of the special skills of the artists. All the color details of the paintings are faithfully picked up in the photography.

**EXPLORING SPACE**

(Louis de Rochemont Associates Film Library, 13 East 37th St., New York 16, N. Y.) 30 minutes, 16mm, sound, black and white or color, 1958. \$175 or \$100.

**DESCRIPTION**

The film presents Dr. I. M. Levitt, Director of the Fels Planetarium, in an illustrated lecture-presentation of the principles of rocket engines.

Doctor Levitt begins his presentation with a discussion of the limits imposed upon internal combustion engines at high altitudes by the thin air. Having suggested the rocket as a substitute engine, he traces the development of the pyrotechnic rocket from its possible origin as a "squib" fire-cracker. A discussion of the operation of a rocket introduces the reaction principle. Dr. Levitt further demonstrates this principle with an ordinary balloon.

Through the use of animation, Dr. Levitt describes the hindering effect of atmosphere on the rocket. He emphasizes that the rocket has no need for the air in its operation and actually performs most efficiently in a vacuum.

Using liquid air and alcohol, Dr. Levitt demonstrates the greater energy of liquid fuels as compared to solid fuels. Scenes of a V-2 firing demonstrate some of the problems of using extremely cold liquid air as part of a rocket fuel. Other liquid fuels are touched upon and the use of concentrated nitric acid as a rich source of oxygen is demonstrated.

The film shows a V-2 launching with a long sequence of footage taken by a camera in the rocket. Using a simple animation sequence without narration, the film depicts a three-stage rocket taking off, gaining altitude, and eventually placing a satellite in orbit about the earth.

*Exploring Space* ends with Dr. Levitt's observation that space travel is actually here.

**APPRAISAL**

The previewing committee rated this film above average for use in elementary, junior high, and senior high school classes in science. The title is misleading in that the film is devoted to a simple study of rocket engines rather than to any of the exploratory aspects of space flight. However, the film presents its information in an interesting manner and will be valuable to elementary classes in which transportation and communication are studied. It is equally applicable to general science classes at the junior high level and it provides a discussion of the reaction principle which will make the film useful in physics classes. The film is rather long for the actual content it presents. Extended sequences of V-2 firings demonstrate actual applications of rocket principles but add unnecessarily to the film's length. The high altitude photographs of the earth are interesting but somewhat divorced from the main theme.

—Merlyn Herrick

**WHEN SHOULD I MARRY?**

(The McGraw-Hill Book Company, Inc., 330 West 42nd Street, New York, New York.) 19 minutes, 16mm, sound, black and white, 1957. \$115. Produced by Crawley Films, Canada.

**DESCRIPTION**

*When Should I Marry* presents through dramatized situations some of the questions young couples should consider in making a decision as to whether or not they are ready to marry.

Upon the suggestion of their parents, Pat, eighteen years old, and Jim, nineteen, visit their minister, Dr. Hamilton, to discuss their readiness for marriage. Opening scenes show the young couple with Dr. Hamilton as Pat and Jim relate their plans after marriage and their parents' desire for them to wait two years. Jim's plan for going to college to take an engineering degree and Pat's working to help financially remind the minister of Betty and Bert whom he had married.

Scenes shift to Betty as Dr. Hamilton explains that she had completed two years of college before marrying and then to Bert who had finished college but is continuing his studies toward a degree in law. The minister further explains that Betty had taken a job to supplement Bert's summer earnings and the educational loan he has received.

As Betty enters their one-room

CONTEMPORARY FILMS presents  
**FOOTHOLD ON ANTARCTICA**

The Commonwealth TransAntarctic Expedition, led by Dr. Vivian Fuchs, aims to make the first crossing of the Antarctic Continent. More than half of which is unknown territory. The journey is to be made between the Weddell Sea and the Ross Sea, with the support of a New Zealand team under Sir Edmund Hillary, during the summers of 1956-8.

This film is a record of the preliminary journey of the THERON to establish a base camp in advance of the main party's arrival.

apartment, she finds Bert, exhausted from studying, asleep in the chair. Awakening him, they discuss briefly the exam he has had and then Betty tells him of an invitation to attend a party that evening. Apologetically, Bert reminds Betty that he has to study for an exam the following day and seeing her disappointment, he promises an evening of dancing when exams are over. Picking up a box she has placed on the table, Betty tells Bert she has bought a linen tablecloth and eight napkins that were on sale. A quarrel ensues over her paying \$9.95 for the items when Bert has been saving his quarters for an \$8 book he needs. Betty replies that she'd like to have just one nice thing in the "dump" in which they live. A second quarrel develops when Betty hangs a hand-laundered piece on the clothesline over Bert's study table and during the exchange of bitter words, Betty wonders how they ever got themselves into this "mess."

The scene shifts back to Pat, Jim, and Dr. Hamilton as the young couple react to the story of Betty and Bert by indicating that they have considered the problem of being married and of going to school. Dr. Hamilton raises two more questions: Have they considered the possibility of Jim's not being able to finish school because of illness or because of the birth of a child which would prevent Pat's continuing work? Are they old enough to handle the special problems of marriage that often require more mature experience? The minister again turns to a young couple, Hal and Helen, who married just out of high school and just prior to Hal's induction in the army. He explains that both Helen and Hal looked to marriage as a means of getting away from family restrictions.

The scene shifts to the small apartment occupied by this young couple as the minister relates that following his two year army service, Hal, talented in manual skills, has found a job in a furniture factory while Helen has home and motherhood responsibilities for their small daughter. When Hal arrives home one evening, he finds that Helen has baked him a birthday cake and has invited four of their former high school friends for a party. Helen explains that she couldn't afford both a cake and a present, so she had baked the cake herself. Hal notices a bouquet of flowers and finds that she has borrowed money from their landlady for the flowers. He comments that she knows it is hard to make "ends meet" on the week the rent is due and questions the advisability of spending borrowed money for such luxuries.

After the guests arrive the conversation establishes that Helen's two girl friends and Hank, one of Hal's boy friends, have each completed the second year of college. Hank is working at a filling station during the summer, and with the money he has earned has bought a second hand car. Al, the other boy, is completing a two-year electronics course that summer. Other bits of conversation indicate that Hank has accomplished army service through college ROTC which would give him a second lieutenant rating upon graduation whereas Hal's rank at the end of his two years of service was still that of a private first class. Al, on the other hand, has received a student deferment to complete his technical training. The girls' conversation revolved around her friends' preparations for college in the fall and Helen's motherhood which she remarks, "Sure ties you down."

When the young couple are invited by their four guests to accompany them to a beach picnic. Hal and Helen decline because of the expense of a baby-sitter. The party comes to a sudden end by the baby being awakened and frightened by one of the guests playing a loud, jazzy record. After the guests leave, Hal wonders how much Al will make after he completes the electronics course.

In the concluding scenes of Pat, Jim, and Dr. Hamilton, they further discuss problems relating to marriage. In answer to Pat's direct query, "Should we get married now?" Dr. Hamilton states several questions he usually asks of young couples who are contemplating marriage: Have you known each other long enough to be sure you're choosing the right person? Can you take on the responsibilities

of marriage, such as earning and saving money and managing a home? If you marry now, would you be cutting off a career before you have a chance to get started on it? Are you old enough to handle all the things that can happen in a marriage—the ups and downs, the emotional upsets, and the disappointments?

In addition to considering these questions, he advises them to consider that an early marriage may result in some of their dreams being realized in the very near future, but also that even more important satisfactions may need to be sacrificed. His concluding remark reminds Pat and Jim that only they themselves can answer the question, "When should I marry?"

#### APPRAISAL

The film presents in an interesting fashion some of the problems young people face in the early years of marriage, particularly in reference to social and emotional problems resulting from stringent financial circumstances. The questions at the end of the film raised by the minister, Dr. Hamilton, can provide a springboard for discussion that goes beyond the dramatized situations portrayed. The user who expects to get specific answers may find the open-ending a disappointment. *When Should I Marry* may be used

profitably with senior high school classes in family living, senior high school and college guidance counselors, marriage clinics, and young adult groups. The film is correlated with Landis' *Your Marriage and Family Living*.

The film contains numerous subtleties which will make profitable several showings. A more profound exploration of the situations reveals deep implications. In the case of Hal and Helen, for example, the conversation revolving around Al's technical training and Hal's thought about Al's potential salary when the course is finished imply that Hal recognizes the limitations family responsibilities have placed on him for training beyond his high school education and the limitations his present job has for advancement and for financial improvement and security. Evident also is the wide gap that has developed in two years' time between the married couple and their unmarried friends with no family responsibilities.

The young people play the various characterizations naturally and the viewer can't help but feel that he is being given a candid view into real-life situations. The dialogue, too, has a natural quality, and at no time does the minister sound "preachy."

—Beryl B. Blain

## Enjoy These Distinctive Advantages of Daylight Projection with LENSSCREEN

## "SIGNS WE SEE" SERIES

Long Filmstrip Service, 7505 Fairmount Avenue, El Cerrito 8, California. The series of filmstrips is in color. The grade range would vary widely depending on use made of the series (see text). Subject area could include reading (remedial or primary), driver training, or English as a language. The series includes five filmstrips that would cost \$4.80 each. The cost of the whole series would be \$22.50.

"INFORMATION SIGNS" (43 Frames). The publisher of this filmstrip series suggests several ways in which the strips could be put to use. These include: enrichment material for the lower grades, remedial reading groups at the junior or senior high school level, classes in English for foreigners, tachistoscopic material, and for use in driver education classes. The first strip, in the series shows thirty-six signs to give information to people or to try to sell them something. The types of signs vary widely with many colors and types of lettering. The color photographs are of excellent quality. At the end of the filmstrip three frames list the actual wording of each sign contained in the filmstrip and provide for a complete review.

"WARNING SIGNS" (36 Frames). This filmstrip contains pictures of twenty-eight types of signs designed to warn persons of danger ahead or to keep them from violating laws. The majority have direct application to driving. The signs pictured are listed in frames at the end of the filmstrip for review.

"PARKING SIGNS" (39 Frames). Thirty-one different signs that were intended to control parking make the core of this filmstrip. As would be expected they pertain to directions, hours of parking, parking limits, and no parking signs. Each sign is different and could provide for some conversation. There are review frames at the end of the filmstrip.

"DRIVING SIGNS—(A) Driving Controls" (41 Frames). This filmstrip contains photographs of thirty-three

signs that help control automobile and truck traffic. They are of a type that would be found on any typical highway or city street. Each sign is listed at the end of the filmstrip in review frames designed to summarize the filmstrip.

"DRIVING SIGNS—(B) Driving Aids" (41 Frames). Because drivers cannot tell what is ahead on a strange road without the aid of signs along the highway, this filmstrip is composed of thirty-three types of these signs which help automobile and truck drivers drive more safely. The majority have to do with turns, speed, road conditions, and other driving aids.

This sign series contained color photos of excellent quality. The material contained in the filmstrips was very meaningful because the students would have seen these signs or similar signs in their daily life. The filmstrips contained in this series would help encourage slow students to learn the meanings of unfamiliar words and in addition help raise questions pertaining to signs and their uses. No teaching guide was furnished. The overall rating given to the series was excellent.

## MOREHOUSE PRIMARY SERIES

Morehouse Associates, Incorporated, 516 Fifth Avenue, New York, 36, New York. Filmstrips are color drawings. Grade range includes primary and intermediate grades. Grade level is noted with each filmstrip. Subject area varies and is noted below. Price for each filmstrip is \$4.80 with no price quoted for entire series.

A41 — "WHAT MAKES THE WIND" (Middle grades, Science, 51 Frames). This and all other filmstrips in this series is divided into three parts aiding the instructor in the presentation of the subject. The three parts are the preparation, the lesson, and the test. Indicators are located in the filmstrip for each part. The first filmstrip deals with the facts about air, both warm air and cold air. In the drawings cold air is always blue and the warm air is always red. This fact is explained to the viewer and

helps with the subject matter. Experiments with common items such as a refrigerator and a stove help prove that warm air rises and cold air tends to go down. These facts are later shown to be the cause of wind and pictures of different types of land are shown to produce types of air movement that in turn causes wind to develop. At the end of the filmstrip there are sixteen frames which are designed to test the material taught with picture questions, completion statements, and other methods to cover all material in the filmstrip.

A42 — "WHAT TRANSPORTATION MEANS TO US" (Middle grades, Social Studies, 46 Frames). In animated cartoon fashion, Little Ted has the experience of being delayed several times while on his way to the city to see the circus. While traveling in the family car they meet and are delayed by trains, trucks, boats, airplanes, etc. He is discouraged by the delays and plays he is the Pied Piper and does away with all types of transportation. He soon finds out that living is very difficult without transportation. He would have to live by primitive methods with no travel, cities, roads, nor circuses. He finds out how valuable transportation is to our country. The test section of the filmstrip

includes questions on foods, furniture, clothes, and services that depend on transportation.

A43—"USING PARTS OF A DOLLAR" (Lower and Middle Grades, Arithmetic, 49 Frames). The first part of this filmstrip illustrates the one-time problems men had when there was no money as we know it. Told by color drawings, a man has quite a problem of obtaining wood when he only has animals to trade. The filmstrip shows how money used as a medium of exchange helps men exchange it for goods they desire. The main lesson taught in the filmstrip concerns parts of a dollar. With pictures of coins, the idea is put across that there are many ways to divide a dollar. Sample purchases help student see the equal value of certain parts of a dollar such as fifty pennies equal a half dollar. The testing part of the filmstrip covers the material very well except that in a few frames counting of certain coins would be rather complicated because so many are pictured as one group.

A44—"WE ALL TAKE TURNS" (Lower Grades, Behavior Lesson, 43 Frames). This very interesting filmstrip teaches good manners by illustrating a story by the use of color drawings. The Burns and Shaw families and all

their relations are introduced by use of rhymed verse. In going to grandfather's house for Thanksgiving, the children observe what poor manners the chickens, pigs, and cows have while eating. Grandfather, noticing that their manners need improvement shows them a game which insures that they will take turns getting a drink at the pump. Their lesson learned, they develop better manners and please their parents. The conclusion of the filmstrip illustrates right and wrong pictures for the viewer to comment from ideas gained while viewing the filmstrip. The vocabulary used in several frames would need explanation to lower grade students.

A45—"CLOTHES AND SEASONS" (Lower Grades, Science, 52 Frames). An object lesson is told by use of color illustrations to show how people lose heat from their bodies through their skin. Comparisons with a refrigerator and bath tub are used to show what happens when we have too much or too little heat in our bodies. The story lesson concerns Polly who is sick in bed with a cold. Her uncle puts on a puppet show that tells her what friends her coat, hat, overshoes, and foods are to her. Mr. Colder is always ready to take away her body heat unless she protects herself with

# Challenging-Inspiring-Stimulating Visuals for your **GUIDANCE** Program

## Guidance Discussion Series

7 COLOR filmstrips encourage teen-agers to discuss the problems they encounter in growing up physically, emotionally, mentally and socially. For later elementary and junior high students

Complete Series: \$34.30 Individual Filmstrips: \$5.45

## How Shall We Live?

5 COLOR filmstrips, with recordings, present everyday situations in which decisions of a moral or ethical nature must be made. Junior and senior high school students can develop their own solutions to such problems through discussion.

Complete Series (Filmstrips, Recordings, Leader's Guides): \$49.

## Living Right at Our Work

5 filmstrips, with recordings, stimulate adult discussion groups to choose the right course of action. The everyday situations of choice, leadership, counsel, attitude and outlook are provocative. For adult groups in church, school, industry and community organizations

Complete Series (Filmstrips, Recordings, Leader's Guides): \$49.

## Learning to Study

7 filmstrips help students adopt good study practices, make more effective use of study time. For later elementary, junior and senior high school classes

Complete Series: \$25.65 Individual Filmstrips: \$3.95

# THE PAGEANT OF AMERICA FILMSTRIPS

*The Ultimate in Visual Education*

- **THE FULL HISTORY** of America's growth, now told in one filmstrip series consisting of 30 carefully integrated units. On brilliant black and white 35mm. film.
- **STIRRING PICTURES**, each contemporary as far as possible with the event or person shown, convey a sense of realism — of personal participation in the historic scene.
- **COMPLETE ACCURACY** is guaranteed by world-famous educators and by the outstanding scholarship of specialists in many fields. Series has been approved and adopted by leading Boards of Education.
- **COMPREHENSIVE SCOPE** of the series makes it an invaluable teaching instrument in nearly every phase of the Elementary and Secondary curriculum—government, foreign affairs, science, economics, civics, sports, architecture, art and literature.
- **TEACHER'S GUIDE** containing fascinating background information and helpful suggestions based on actual classroom experience is furnished free with each unit.

*Place your order now*

## YALE UNIVERSITY PRESS FILM SERVICE

386 Fourth Avenue, New York 16, N. Y.

We urge you also to order Yale's famous publications, **THE PAGEANT OF AMERICA**, 15 vols., and **THE CHRONICLES OF AMERICA**, 56 vols. Both series are widely recognized as standard for use in teaching American history.

her friends. The different seasons are illustrated with the proper clothing necessary for each. The end of the filmstrip has an excellent review with questions and matching statements for pictures.

This primary series was outstanding in terms of organization of learning matter. No teaching guide was necessary with the parts of each filmstrip clearly identified as the filmstrip was being shown. The use of color and pictures was excellent and the material would be very meaningful to the intended grade group. In some cases words were used in the vocabulary that were judged too difficult for some of the grade levels the filmstrip were designed for. Each filmstrip is a lesson in itself and could be used effectively for presenting new material.

The overall rating of the series was excellent.

### SINGLE SUBJECT FILMSTRIPS

Visual Education Consultants, Incorporated, Madison 4, Wisconsin. Filmstrips are in black and white. Grade range is wide including intermediate grades through high school. Subject area includes social studies and science. Price for each filmstrip is \$3.50.

"MACHINES FOR A LAND OF PLENTY" (36 Frames). This filmstrip briefly describes the development of farm machines that through the years have greatly changed the methods of farming in America. This

progress is shown to have helped raise our standard of living to the highest in the world. The many pictures of farm machinery would be of questionable value to anyone who is not familiar with farm operation and farming problems. The pictures would be more likely to promote understanding in children who live in farm districts.

The story as told through pictures would be ineffective for many audiences who would not be familiar with basic farm machinery and farming methods. The pictures were judged of average quality, and the filmstrip would be meaningful only with sufficient background. The captions were excellent for intended grade group and the teacher's guide was adequate. The filmstrip answers questions and would be best to present during a unit as supplementary teaching. The overall rating was good.

"HOMES AROUND THE WORLD," (36 Frames). Many homes of vastly different types are shown in this filmstrip from all parts of the world. Shown as a necessity for all men, some of the reasons are discussed such as, climate, protection from weather and dangers and the background of the community. The type of home is discussed in relation to the available building materials and the skill man has in using them.

The story was excellently told with the use of pictures and the pictures themselves were of excellent quality. The filmstrip would be very meaningful to the intended grade group and the rating given to the captions was excellent in relation for the various grades. The publishers guide for the filmstrip was adequate and included a completion test. The filmstrip both asked and answered questions and would be best used to summarize material in teaching. The rating was excellent.

"GREAT LAKES SHIPPING," (28 Frames). The filmstrip takes the port of Milwaukee to discuss incoming and outgoing cargo in a typical lake port. Differences in cargo and ships used is shown throughout the filmstrip. A comparison is made between lake shipping and overseas trade.

The pictures were of exceptional quality throughout the filmstrip. The story was excellently told with pictures and the lesson would be meaningful to the intended grade group. The captions used acceptable vocabulary for the grade level and the teaching guide was judged outstanding. The filmstrip both raised and answered questions and would be best used to introduce material to be taught. Overall rating was excellent.

# SOUND advice

about audio materials  
and equipment

by MAX U. BILDERSEE

Many new recordings are promised for early release; recordings which should contribute to the instructional program in many subject areas.

Although no new titles, per se, have as yet been announced it is reasonable to assume that CAEDMON will continue to offer exceptional material for school purposes. ENRICHMENT has announced eight new fall titles including "Thomas Jefferson," "The Vikings," "George Washington" and "Santa Fe Trail" in their regular series of recordings recounting American history.

In addition, there will be four additional titles under the ENRICHMENT label in a new series spotlighting documents which have been milestones in American History. In the first series of four, due for release this fall, there will be recordings recounting the events preceding and including the delivery of such American classics as Patrick Henry's "Give Me Liberty or Give Me Death" speech, the "Declaration of Independence," "Lincoln's Gettysburg Address" and "The Bill of Rights." We are interested in hearing these recordings for two reasons—first that they will highlight documents rather than people and second that they will be so developed that the music of the time—the folk songs and popular songs of the day, will be employed to crystallize impressions concerning the attitudes of the Americans of another day.

In the field of English Literature for secondary schools we are looking forward to hearing "Twelfth Night," "Much Ado About Nothing" and "The Taming of the Shrew" as they are produced by SPOKEN WORD.

Languages and Music will not be forgotten. OTTENHEIMER is producing, under the CABOT label, several new albums including one on the "INSTRUMENTS OF THE ORCHESTRA" and the "MAGIC OF MUSIC." Ernest LaPrade and Milton Cross are participating in the planning

and production of these records. Mr. Cross is remembered by many as a pioneer in broadcasting and particularly in music broadcasting. He has been the voice for such organizations as the NBC Symphony and the Metropolitan Opera Company on the air. Mr. LaPrade has been active for more than twenty-five years in bringing the best music into the home through radio and television in his capacity of Director of Music Activities for the National Broadcasting Company. Amateur philharmonicists will remember Mr. LaPrade as Director of the NBC Orchestra in their "add-a-part" series of some years ago which invited home participation in orchestra presentations.

In the languages there will be a new series by the WILMAC RECORDERS of Pasadena, California in the area of Spanish. This set of recordings is being developed cooperatively with schools of the Los Angeles area and promises to be very valuable.

In addition, RCA-VICTOR will continue the development of their "History of Music" series and DECCA plans to reissue their classic "No Man Is An Island." STRATCO AUDIO-VISUALS is readying a new recording to be accompanied with special visuals. This will probably be in the rhythm field and will definitely be designed to appeal to elementary school personnel, and their students. It is anticipated, too, that FOLKWAYS will continue their exploration into the area of children's recordings with special emphasis on folk music interpreted for the kindergarten and first graders. EMC of Minneapolis is planning a revision of their tape recording program in an effort to bring it closer in line with the needs of schools.

Pete Seeger sings "AMERICAN FOLK SONGS FOR CHILDREN" (Folkways Records and Service Corporation number EPC 1) is one of those rare joys in instructional recordings

**RECORDERS, TAPE DECKS, TAPES, AMPLIFIERS, Accessories.** Excellent Values, Catalogue. **EFSCO SALES, 270-E Concord, West Hempstead, N. Y.**

in that it employs the simplest form of presentation, does not in any sense usurp the function of the teacher and offers a variety of appropriate utilization procedures limited only by the imagination of the teacher. The four songs presented include "All Around the Kitchen," "This Old Man," "Coming Around the Mountain" and "Train is A 'Coming.'" The latter is an ideal play song for children—simple to sing, with an easy rhythm, and ideally adapted for local improvisation and classroom participation. It is so effective that it can be readily adapted to a simple auditorium presentation involving an entire class not only in the singing but also in simple rhythmic activities which can readily delight either a child or an adult audience. This one is pure and unadulterated fun!

"All Around the Kitchen" is also a participation song calling for such simple activities as "put your hand here" and "close your eyes" and "turn right around" and so forth. This, too, the class can sing, play and improvise to simultaneously. "This Old Man" is fundamentally a counting song using the numbers from one to ten and of course has immediate application, in kindergarten and first grade levels, to the application of play time to learning pursuits. The music is rhythmic and invites body motion and self-expression. It is within the singing capacity of practically every child—no, of every child—and yet it is 'good music' being folk music long accepted. By singing and playing together the children can develop that essential sense of participation in group activity and at the same time make individual contribution to the development of the program.

Dog stories always delight children—and they will enjoy hearing "OLD

**YELLER**" (Disneyland number WDL 3024) which is taken largely from the sound track of the Walt Disney film of the same title. Of course "Old Yeller" is a mongrel and is a hero; protecting his human family from many perils including an angered bear, a mad wolf, and a pack of crazed hogs. In this series of adventures "Old Yeller" develops hydrophobia and in turn has to be destroyed. But the story has a happy ending with the ending involving a pup, "New Yeller" being of course from a litter sired by the hero. Elementary grade children may enjoy hearing this as leisure listening and it can be presented to a group in serial form to last over several days.

Although ostensibly directed to children, "TALES OF HANS CHRISTIAN ANDERSEN" (Caedmon number TC 1073) does not quite succeed perhaps because of the cultivated 'stagy' presentation by Michael Redgrave. Mr. Redgrave's delivery will appeal to adults, and the reacquaintance with "The Tinder Box," "The Emperor's New Clothes," "The Steadfast Tin Soldier" and "The Emperor's Nightingale" is delightful. The latter of these stories, incidentally, runs far beyond optimum listening time for children, occupying approximately twenty minutes. In addition, the language employed is beyond the experience of most children and consequently beyond their understanding despite the broader nature of the listening vocabulary.

However, in teacher training institutions this recording may serve an essential function in helping young people training to instruct in the kindergarten and first grades, develop an acceptable style for story telling. Mr. Redgrave's easy delivery and obvious pleasure can be effectively emu-

SCIENCE

Here are some ways you can use tape to make your science teaching more exciting and alive.

- Let a student amateur radio operator tape the "beeps" from Vanguard or other satellite. Let him also tape the regular code of short wave radio, to offer as contrast.
- Let different groups in the class create, and record, dramatizations of the discoveries of famous scientists.
- Tape a talk from a scientist; arrange a taping of a radio or TV program which was broadcast during class hours.
- Common sounds can be taped and played back for the class to identify the scientific laws illustrated — approaching and passing train whistle: Doppler effect, for example.
- Tape the sounds of nature — birds, animals and insects.
- Build a library of taped experiments. Have a gifted group in your class do an experiment together. Let them record their procedure and conclusion. This can serve as a model and instructor for another group to perform the same experiment. Other groups can tape other experiments. Tapes can be exchanged among groups.

The sound quality of a tape recording can be no better than the quality of the tape on which it is recorded. Educators' critical requirements for fidelity of reproduction and consistent quality are easily met by any of the eight types of Audiotape. This complete line of professional quality recording tape offers the right recording time and the right tape cost for any application. But, regardless of type, there's only one Audiotape quality — the finest that can be produced. For more information write Audio Devices, Box EV.

**audiotape** *it speaks for itself*

AUDIO DEVICES, INC., 444 Madison Ave., New York 22, N.Y.

lated and make the listening training session on both the college and the school level more effective. In addition, those training for library work which will involve children (either school or public libraries) not only should be fully acquainted with the recording but can profit from hearing it for practice in critical evaluation of known materials.

"AS YOU LIKE IT," the delightful Shakespearian comedy so often presented to senior high school and college students, is now available in unabridged recording produced by The Spoken Word (Number SWA4). This is delightfully performed and the producers have wisely resisted all efforts to accept overacting, or to "gimmick up" the Shakespeare script with undesirable additions. There are a few — a minimum — of sound effects used only to indicate scene and to record action which might otherwise be lost. On the other hand, this is purposefully restrained so that the listener can participate fully in the delightful experience of recreating scene and action.

Similarly, performance is kept simple and language difficulties largely eliminated. Orlando and Rosalind are offered in reasonable interpretation as are the other leading characters including Celia, Oliver and both Dukes. Even the comedy portions are played

for the breadth which would appeal to an Elizabethan audience and yet are readily understandable too, and appealing to the twentieth century listener. This performance cannot leave the listener cold, but can be effectively employed either in class or assigned listening to heighten interest in the artistry of Shakespeare.

"GREAT AMERICAN SPEECHES" (Cacdon TC 2016) is a 'must' for the shelves of every secondary school and every library. Herein are delivered with supreme artistry such essential American political documents as William Jennings Bryan's "Cross of Gold Speech" and Patrick Henry's "Liberty or Death." The "First Inaugural Addresses" of both George Washington and Thomas Jefferson are included in this recording as are three Abraham Lincoln presentations. "A House Divided Against Itself," "Cooper Union Speech" and of course the "Gettysburg Address." Robert E. Lee's "Farewell Order to his Troops" is effectively delivered as is Robert Toombs' famous document on "Secession." These alone make the recordings worthy of addition to school, library and home collections but also included are the less well known statements by Josiah Quincy on "The Admission of Louisiana," Henry Clay on "The War of 1812" and Charles Sumner on "The Crime Against Kansas."

# Church department

by WILLIAM S. HOCKMAN

## This and That

### I

The days when the announcement of a film would bring a crowd to the church meeting are over; definitely over, and all to the good. The trouble is that some leaders in the churches don't know it. James P. Thompson, of Concordia Films, thinks that churches should be warned of "the pitfalls of advertising a meeting with the magical words, "a film will be shown." He adds, "If the theme of the meeting will not arouse interest and create a desire to attend," the announcement of a film will do little good. We agree. Let's keep the whole program first, with the film as one of the elements.

### II

Another reader of this department wants me to review films and other materials in the light of the purpose of the producer. This is good advice. I'll try, but it is pretty hard to find out that purpose and goal at times. Some producers are not very specific. They don't have a purpose, but purposes. Some years ago I did a little investigation with some seminary seniors. After presenting a film to them, they were asked to write out what they thought the producer's purpose was and this was compared with what the producer said his purpose was. These students hit mighty few targets, and seldom scored a bulls-eye. I thought that a significant datum; and still do.

### III

We are advised, also, to be less subjective in our criticisms. Fine counsel, but hard to bring off. We are accused of getting 'fun' out of registering our "subjective likes and dislikes." Do not our readers, in the long run, come to understand our subjective biases and make due allowance? The trouble is that getting up into objectivity requires, in this instance, climbing a ladder without rungs. Again, show me objective reviews in other fields—

that are worth reading. We don't find them in the field of books, and art, and entertainment. Why in the field of religious films? While objective criteria can be set up for the medium as a medium, (and this will be none too easy) we will run into great difficulty when you try to develop objective criteria for quality of content. Any one for objectivity?

## Un-Clear Profile!

As this is written, it looks like downhill to a world crisis centering in the Middle East. Thus, the study of this region this year by the churches' is timely, indeed. The 28½ minute color and/or B&W sound motion picture, *Mid-East Profile*, was produced to be an integral part of this study. Church leaders will use it in many ways: as background for reading and special study programs; as background for speakers and panel discussions; as a fast way to give information to church school teachers and orient them on some of the larger aspects of the work of the church.

This film shows Protestantism's concern to bring learning to the common man of the Middle East, to bring education to women, to bring the more productive modern methods into agriculture, to use the printing press to promote literacy and general enlightenment. All this must take place against a background of assertive nationalism. Fraternal workers do not have an easy time demonstrating the Gospel in this region, and their task will grow more difficult by the day. As Dr. Charles Malik remarked, pessimism prevails when we consider Christianity's prospects there for the next decade; optimism, when we look ahead a century. It is to keep this longer view alive that the church must study, and think, and act in these days. For all kinds of uses above the Junior Hi level, this film is highly recommended. (From your local A-V library; color, \$12; B&W, \$8.00).

## New Filmstrips

*God of Creation*, a 60-frame color filmstrip, was produced for use with church school lessons touching upon the theme, "God and His World." The art is by Oliver Grimley; the commentaries by Ruth Curry (adults) and Thora K. Brown (children).

This useful filmstrip shows one family trying to find an answer to the question, "How did the world come to be?" In exploring this question, they compared a Japanese myth of creation with the Bible story given in Genesis, noting important differences.

The filmstrip breaks into these sections: family conversation; the Japanese story of creation; the Bible story of creation; how the two stories differ; man's knowledge of God's creation; and man's response to God's creation. In conception the art work is good and in execution it is acceptable; and, the commentaries are quite satisfactory. Planned for primary through adult age bracket, there are good utilization suggestions in relation to course subjects and age groups. Recommended.

*Members One of Another*, a 59-frame filmstrip, was produced for use with Juniors and up when one desires to show how God intends that we should really come to know each other; not just exist alongside each other. This is a fairly sophisticated religious theme, but the filmstrip, both in its art (J. Thomas Leamon) and in its two commentaries (Ross Snyder for adults; Grace S. Tower for children), brings the job off very well. Of course, the user will need to note with care the symbolism employed, and orient every audience carefully.

"This filmstrip," according to the producer, "seeks to explore a person's inner life, and its main emphasis is the importance of being honest with ourselves as well as with others, and of recognizing others as being persons just as we are." The biblical text for this is Romans 12:5. Very likely the

most effective use of this filmstrip will be found to be with teenage young people and adults. Recommended. (Both were produced by Christian Education Press, 1505 Race St., Philadelphia 2, Pa.; buy direct, or through your A-V dealer).

### Film Document on Haiti

By and large across this country the land and people of Haiti are little known and its culture little appreciated. By and large the church people will know all too little of fraternal (or mission) work on this island. Now that lack can be cured—in 28 very exciting minutes of superb motion pictures. I refer, of course, to the Shilin-produced *Heart Beat of Haiti*. It documents the work of the Episcopal church as it is carried on by bishop, lay preacher, native priest, or acolyte; or by those devoted sisters whose great work is healing and teaching. The color photography is excellent, the commentary sensitive and laden with information having a bias for appreciation. And, as a bonus, this film presents a pleasing amount of the brilliant native art, just now coming to wide notice, and from the first encouraged and helped by the church. Denominational references do not limit this film's general usefulness when the real meaning of 'missions' needs to be shown to young people and adults. Highly recommended for use in connection with this year's study by the churches of our North American Neighbors. (From A-V Dept., Episcopal Church, 281 Fourth Ave., N.Y. 10).

### Youth Seeks The Answer

After a 'hot' argument a group of high school age young people decide to find out what alcoholism really is. By twos they interview people, from judge to housewife, and then report back what they have found. Naturally, there is a wide divergence of opinion as to what (true) alcoholism really is, and strong disagreement among the young people on what to do about it. The technical qualities are good; a useful film to motivate youth groups to undertake 'research' and plan for

informed discussion of a serious social problem. (Eleven minutes; B&W; from McGraw Hill, 330 W. 42nd St., N.Y. 36).

### Three Study Resources

*Jordan Valley*, a 19-minute B&W documentary film available from the International Film Bureau (57 E. Jackson Blvd., Chicago 5), skipping the present political situation, it keeps to history and geography and can assist youth and adult groups in understanding this area of the Middle East.

*Challenge in The Sun*, a 30-minute Alan Shillin-produced color film, tells the story of the first three years of 'missionary' work in Panama by a young couple. The 'script' is good and the pictures fine, and while the denominational reference is Episcopal the film's general usefulness is unimpaired. (From A-V Dept., Episcopal Church, 281 Fourth Ave., N. Y. 10).

*This Is Palmira* is a 63-frame color filmstrip showing the daily life of a little girl in the shrine-city of Guadalupe, Mexico. We see her in relation to the Protestant Center; at play; at school; at home helping with the work; at the market; and at Sunday

School. It has two uses with Primary and Junior boys and girls: a) to spell-out 'missions'; and, b) to present an attractive little Mexican girl and her life and ways. (Printed script; from Congregational Christian Missions Council, 287 Fourth Ave., N.Y. 10).

### Marian Anderson Film

The "See It Now" television report on the highly successful tour of South-east Asia for the State Department by the celebrated artist Marian Anderson, is now available in a 16mm B&W sound film with a running time of about 60 minutes and a rental of \$25.00. It shows her speaking and singing in Korea, the Philippines, Vietnam, Burma, Thailand, Malaya, and India. Before all audiences she is triumphant. While spot-recorded, and often with inadequate equipment, her great singing and her charming speeches come through poorly at times, but even then reveal the supreme artist, fine woman, and great American she really is. Here is a fine feature film for church audiences, beginning with the older young people. (From Contemporary Films, Inc., 267 W. 25th St., N.Y. 1; and for the Midwest, 614 Davis St., Evanston, Ill.)

## FILMSTRIPS WITH A NEW LOOK!

*Family Filmstrips*

A new, different and exciting concept of church filmstrips — all in color, with sound — geared to the churches' needs. Subjects for all age levels (Kindergarten, Primary, Junior, Young People, Adults) include:

**STORIES FOR THE KINDERGARTEN**

"Stories About Jesus" — "Stories About the Seasons" — "Stories About Home and Family." Beautifully illustrated and narrated with the small child in mind, FEATURING ORIGINAL MUSIC and INCORPORATING MANY SONGS familiar to the church school kindergarten children. Kit of 4 filmstrips and 2 records—\$19.50

**TEENAGE TOPICS for CHRISTIAN YOUTH**

Helpful, Christian guidance in boy-girl friendships, dating and marriage, in a manner and style most appealing to the teenager. BUILT-IN UTILIZATION HELPS and RECORDED DISCUSSION BANDS to encourage pupil participation. Kit of 4 filmstrips and 2 records — \$25.50.

# Audio-visual trade review

## NAVA Exhibit Shows Growth and Challenge!

The National Audio-Visual Association's 18th annual convention and exhibition, held July 26-29, in Chicago, drew a record attendance. Approximately 160 booths displayed almost every imaginable A-V device or material, from film cement to teleprompters and professional animation stands. Thirty-three of the 123 exhibitors were at the NAVA show for the first time.

This annual event is essentially a "selling" show. It is attended mainly by dealers who come to meet with the executives of their supplier firms and seek new profitable lines and sources, and by the user A.V "pro" who knows that this is the one best place to learn, all under one roof, what is and what is to be. Excellent as are the formal programs of the six organizations participating, probably the most "educational" feature is the annual trade show (pardon, "exhibit"!).

It is noteworthy that the largest single category of exhibitors, old and new, was the audio group. Having created consumer demand by means of national advertising and well-placed how-we-do-it feature articles, the audio manufacturers are now more actively seeking qualified audio-visual dealers. The better dealers

in turn sense the growing consumer demand and are striving to train their sales and service staffs to win this audio market which for a time threatened to become a radio parts jobbers monopoly.

Similarly encouraging was the increased emphasis on equipment and materials for the production of transparencies and other custom originals for overhead, opaque and non-projected showing. This group now ranks fifth in the exhibitor total; among the first-time exhibitors it was in second place. Also in this area of materials production advertising, articles by users, and manufacturers' convention demonstrations have kindled increasingly active dealer interest.

There seemed to be fewer TV camera makers in attendance, but more exhibits of the incidentals of educational film and TV production. Is this because the TV camera and monitor makers also have found the A-V dealer unprepared to meet the challenge of the new medium, unable or unwilling to learn the technical requirements for sales and service contacts? Some of these "incidentals" are sizable, professional units. The Oxberry animation stand or the Teleprompter would make a nice item on any dealer's sales sheet.

On the basis of his more intimate knowledge of what these items will do in meeting specific educator needs a qualified A-V salesman should be able to promote orders for such major items. If the factory's "sales engineer" is called

in by the dealer as a technical consultant, the dealer would normally write the order. But where the dealer waits for the customer to call in the factory man, the sales engineer will likely double as the order taker, too, with the dealer outside looking in and the customer without a local source of counsel.

There are dealers who are keeping abreast of the ever widening demands of their A-V market. Their men are able to demonstrate reading accelerators, stereo-audio for the language arts, public address, lighting control, acoustic treatment, graphics production, closed-circuit TV, etc.

In the more traditional areas the exhibit was fully up to previous standards. The 16mm motion sound picture projectors were all well represented, with a newcomer added, the Marcellus, formerly "Miracle." Graflex showed the first new "Ampro" machines made in its Rochester plant; Technical Service had a lightweight, attractively re-styled projector based on a modified "DeVrylite" mechanism; Harwald has done the same with its "Moviemite." LaBelle now advances its slides with taped signals; DuKane will soon have a "Flip-Top" sound slide at 33 1/3 to supplement its present 45. Radiant and DaLite both featured new screen materials having greater reflection quality and wider angle; new competition is entering the screen field, there were the screen exhibitors at the show.

The 16mm filmstrip, as exhibited by a newcomer, the U. S. Projector Corporation, has reached the make-it-yourself stage. Polariod has added to its educational applications with a self-contained device for making 60-second paper or transparency copies.

Exhibitors of religious films and filmstrips this year actually outnumbered the displays of strictly school and entertainment films combined. Family Films, Inc., celebrated its 10th anniversary by entering the film-slide field with 40 new titles. Cathedral Films added several new series of filmstrips, among them "The Bible and the Presidents," and the "Story of the Prophets." Moody Institute emphasized its science series. Concordia scored unchallenged "tops" for all-around convention showmanship.

The NAVA business meeting approved a vital constitutional change where, under pressure of the government's anti-trust decree, "Advisory Membership" was abolished. Manufacturers and producers will be asked to continue their financial support, but as "Sustaining Members" without voice in the affairs of the organization except when, as space buyers in the annual trade show, they may elect a 6-man "Exhibits Committee" to consult with the NAVA Board of Directors on exhibit matters.

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top in your projector... your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector... to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops... machine-made filaments assure pictures bright as life.

**Cooler**... Ceramic Blue Top is bonded to the glass for improved heat dissipation... cooler operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

# News in the Trade

## VIEWLEX DISPLAYS NEW LABEL

Viewlex, Inc., 35-01 Queens Boulevard, Long Island City, New York, manufacturers of Viewlex Slide Projectors and Audio Visual Projection Apparatus, announces that all of its Audio Visual Equipment will henceforth be packaged in cartons which boldly feature a new emblem prepared by the Public Service Advertising Council: "Better Schools Build Better Communities."

Having always offered Visual Aid Equipment on a free loan basis to summer schools, teacher training programs, PTA groups and Adult Education Seminars, Viewlex's use of the new emblem is consistent with established company policy.

## MOODY MOVES

Moody Institute of Science has just expanded its operation by taking over the former Bank of America building at 11328 Santa Monica Boulevard (Los Angeles 25, Calif.) for its distribution, shipping and business headquarters. The M.I.S. photographic department, one of the world's most noted centers for the production of science films, continues in the three-story former Masonic Temple, at 11428 Santa Monica.

## USAF USES SLIDING CHALK BOARDS

The new U. S. Air Force Academy will have 6,000 "blackboards" of steel, sprayed with a glass frit porcelain enamel, so they can be used as magnetic "tack" boards and will take removable chalk writing, according to an announcement by the United States Steel Corporation.

## BAILEY'S 20th

Bailey Films, Inc., in marking their 20th anniversary as educational film producers and distributors, have doubled the size of their quarters at 6509 De Longpre Ave., Hollywood 28, Calif. A new subsidiary has been formed, "Film Rentals, Inc.," to handle rental distribution from regional area centers as well as from the Hollywood address. In addition to its own stepped-up production schedule Bailey handles the product of 44 independent producers.

## FAMILY'S 10th

The 10th anniversary of the founding of Family Films, Inc., was observed during NAVA with a dinner attended by more than 200 dealers. Motion pictures, sound filmstrips, tape recordings, P.A. and even a live glee club contributed to the program. The occasion was marked also by an initial offering of 40 new sound filmstrips, a four-unit sound filmstrip training course in the function and use of A-V in the church, and two new motion pictures on evangelism and on stewardship.

Sam Hersh, president and founder of Family Films, Inc., cuts 10th anniversary cake at Hotel Morrison dealer dinner.

## AAFC EXPANDS

The boom in school building and especially the growing emphasis on classroom ventilation in connection with the use of audio-visual materials is a major impetus to the 50 per cent increase in consolidated plant facilities of the American Air Filter Co., Inc. Its Quad-City (Davenport, Moline, East Moline, Rock Island) Herman Nelson Division plant is getting a \$750,000 addition.

## BELLEVUE GETS PROJECTORS

Effective slide projection is assured in Bellevue Hospital's new Alumni Hall (New York City) by the installation of four Genarco slide projectors. The 500-seat auditorium is served by the 3,000 watt model, which delivers over 4,000 lumens to the screen; the three 175-seat classrooms each have a 1,000 watt model. All are equipped with electric slide changers operated from the podium by remote control.

The large auditorium has a throw of 88 feet to a screen 16 feet wide. The classroom screen is 12 feet wide, the throw 40 feet. The changer accommodates 70 glass slides, 3 1/4 x 4 or Polaroid.

## "FIBERBILT" CASES

"THEY LAST INDEFINITELY"

Equipped with steel corners, steel card holder and heavy web straps.

# GET MORE FOR YOUR PROJECTOR DOLLAR

## VICTOR 1600 ARC

If the high cost of 16mm arc projectors is forcing you to "make do" with an auditorium-type incandescent—you owe it to yourself to consider the Victor 1600 Arc. It delivers a full 1600 lumens of light on the screen at 30 amps with Mark II Shutter—more than three times that of any incandescent—yet it's still easier on your budget than other 16mm arcs. It incorporates all advanced Victor projector features and a powerful 25-watt amplifier. The 1600 Arc runs for a full hour on one set of carbons, does not require a special projection booth, and is the only arc projector made with 3-case portability.

### SPECIFICATIONS:

*Selenium Rectifier* has top-mounted controls, swing-out legs, built-in tilt lock, is blower cooled. Also serves as base for projector.

*Speaker case* houses 12" bass reflex speaker and is carrying case for 25-watt amplifier-projector unit.

*Lamphouse* has built-in ammeter with motor rheostat, automatic carbon feed, external arc position marker.

Compare the Victor 1600 Arc side by side with any other 16mm arc and see for yourself how much more you get for your projector dollar.

**PROJECTOR IS...**

*Guaranteed  
for  
a Lifetime*

Many projectors LOOK somewhat alike, in appearance and price — but Viewlex has something extra! Rigidly controlled standards of QUALITY carried through every step of manufacturing assure projectors that are trouble free and a delight in operation. VIEWLEX QUALITY CONTROL is a precious property — it is the real reason why Viewlex guarantees every Viewlex projector for a lifetime!

**V-4S — V-44S**

For single-frame filmstrip. The ideal budget-priced filmstrip projector. Clear, sharp projection; brilliant illumination; simple to operate. Cannot tear film. Model V-4S 150-watt convection cooled. Model V-44S 300-watt motor fan cooled. 2", 3", 5" and 7" focal-length lenses available.

**VIEWLEX VIEWTALK**

Plays standard and long-playing records, up to 16" — two permanent needles on twist arm. 33 $\frac{1}{3}$ , 45, or 78 r. p. m. Model WR — 4" x 6" detachable speaker for 150 or 300-watt Viewlex projectors. Model WHD — 6" x 9" detachable speaker for 500-watt projector.

**V-500**

For 35mm filmstrip single and double frame, vertical and horizontal pictures. Takes 2"x2" and bantam slides in any type mount intermixed. New refrigerator cooling. 500 Watt fan cooled. 5 inch F/3.5 Professional lens. Automatic take up reel and optical magnifying pointer. 3, 5, 7, 9, 11 inch lenses available.

**HI FI  
VIEWTALK**

A top quality sound-slide unit—3 speed record player for records up to 16". Brilliant, sharp projection provided by V-500 35MM combination slide-filmstrip projector. Projector or sound system may be used independently. Microphone jack provided.

**INSTRUCT-O-MATIC**

Completely automatic projection of 2 x 2 and bantam slides. A touch of changer automatically brings new slide in position. Automatic timer—remote control—lets you sit with your audience. 500 watt fan cooled. Interchangeable lenses. Turns room light off when projector is turned on.

**V-2C - V-22C - V-25C**

For 35mm filmstrip single and double frame, vertical and horizontal pictures, 2x2 and Bantam slides, any type mount. Change from filmstrip to slides in seconds. V2C—150-watt, V-22C—300-watt motor fan cooled. V-25C—500-watt motor fan cooled. 3-5-7-9-11 inch lenses.

# OVER THE YEARS

Flexalum Audio-Visual blinds  
will be your most economical,  
most practical  
classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT CLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of blackout and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in... less money goes out—with Flexalum A-V blinds... sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

## On the SCREEN

### This Month's Cover

Workmen in 17th century costume are caught by the camera as they forge a bloom under a water-powered hammer in the restored iron works at Saugus, Mass. They are featured in Bethlehem Films' "Futures in Steel," a color and sound film demonstrating the many opportunities in the steel industry. From early ironmaking, the film proceeds to show the industry's great developments in technology, and the new products and processes they have made possible. In line with the ever-increasing use of films and other audiovisual aids by companies such as Bethlehem Steel, we salute the Industrial Film and Audio-Visual Exhibition, described in the September issue.

Bethlehem Films are available through Modern Talking Picture Service, 3 East 54th Street, New York 22, N. Y.

### Good News from the Filmstrip Department

*Educational Screen and Audio-Visual Guide* is very pleased to announce a new filmstrip editor, Dr. Irene F. Cypher, with the knowledge that our readers will welcome her as happily as does the staff. Dr. Cypher is an associate professor at New York University; she has served as president of the Metropolitan New York Audio-Visual Association and is a Member of the Board of Directors of DAVI, where she has been especially active on the Committee for Buildings and Equipment. Co-author of *Audio-Visual Techniques for Enrichment of the Curriculum* (Noble and Noble), she is one of the widely acknowledged experts in the field.

EDGAR DALE, Head, Curriculum Division, Bureau of Educational Research, Ohio State University, Columbus

### AV and International Understanding

The celebration of United Nations Week, October 19-26, makes us concentrate on the fostering of international goodwill. Two articles in this issue demonstrate how we in the audiovisual field can aid the cause. In one, Laura Osborn describes its emphasis in the Detroit schools and the interesting methods whereby the pupils create their own audiovisual aids to promote better understanding among races and nations.

In *Informing the Philippine People*, William G. Hart writes of the wonderful work being done through audiovisual to enlighten and entertain the rural island people. Mr. Hart, former Audiovisual Director of the Dearborn, Michigan, schools, soon finishes his second term assigned to the U.S.A. Operations Mission to the Philippines. He intends to remain in foreign service for a few years, describing it as "an exhilarating experience."

### "Architectural Solutions for Audiovisual Problems"

With the article by Edwin Carmony on the new materials center at Gary, Indiana, we inaugurate this series of stories on building designs to improve and facilitate the use of audiovisual aids. Those of our readers who have helpful solutions or provocative ideas to suggest are cordially invited to correspond with the editors regarding possible publication in the future.

An accurate and balanced account of a  
resourceful, seafaring people . . .

# the VIKINGS and their explorations

This new Coronet film gives an authentic account of the fabulous adventures of the Vikings—a bold, hardy people whose raids along the coast of Europe created terror throughout the continent. We learn of the important influence they wrought on European history from the ninth to twelfth centuries, as they sailed from their homeland to Ireland, Britain, Eastern Europe, France, Greenland and Iceland.

The film pictures how the earliest Vikings lived—their houses, foods, dress, and the importance of ship-building. Selections from famed collections of colorful artifacts in Swedish and Norwegian museums contribute to the film's visual richness.

The film is designed for use in Social Studies in the intermediate grades, but is also effective in World History in junior or senior high school. Available in either color or black-and-white, **THE VIKINGS AND THEIR EXPLORATIONS** is one reel (11 minutes) in length.

*Other new Coronet films in full, natural color or black-and-white.*

**The Story of Our Money System** (11 min.). From Ancient Greece and Rome to modern times, we see the development of "money" as a medium of exchange. The various forms it took—animals, salt, and metal coins—are shown as a prelude to today's standardized money system, which meets the need of a complex industrial civilization. *Intermediate.*

**Trees: How We Identify Them** (11 min.). Selective views of common trees found in various forest areas of the United States help pupils identify trees in all seasons by a variety of clues—shape, leaves, bark, and fruit or nuts. *Intermediate.*

**Simple Plants: Bacteria** (13½ min.). This film shows the major characteristics of bacteria—useful and harmful varieties—growing bacterial colonies and checking bacterial growth. Photomicrography and animation illustrate the physical appearance and internal structure of bacteria. *Senior High.*

**English Literature: The Seventeenth Century** (13½ min.). The sixth in the series, this film surveys literary efforts of the period to create awareness of the social mainstream from which the literature grew. Herrick, Jonson, Lovelace, Milton, Bunyan, Dryden and Pepys are some of the authors quoted and shown. *Senior High.*

**Electricity All About Us** (Exploring Science) (11 min.). Here is a visual basis for introducing a number of concepts about electricity at the lower grade levels. Static and current electricity, an electrical circuit, conductive materials, and the importance of electricity in the home are illustrated. *Primary, Intermediate.*

**Making Sense With Outlines** (11 min.). To help pupils organize information and ideas and make clearly written and oral presentations, this film stresses the practical aspects of making an outline. We see how outlines help to present topics logically in many phases of education. *Intermediate.*

**Write for preview . . .** if you are considering purchase, use the coupon to request preview prints of the films of your choice. There is no obligation except for return postage, and Coronet films are available at lower cost than comparable films. If you are interested in rental, request a list of Coronet film rental libraries.

TO GET THEIR  
ATTENTION  
AND HOLD IT...

**NEW 310**  
**Ekotape**<sup>®</sup>  
with AV CONTROL CENTER

The 310 Ekotape eliminates the unchangeable "canned" presentation, since tapes can be erased and re-recorded, or cut and spliced, to correspond to changes in slides or film sequence.

Break the spell and you lose attention. In audio-visual presentations with the new 310 Ekotape, sight and sound are always together. There's no "next slide, please," no "beep" or tone signals — nothing to divert young minds. The 310 recorder with the amazing AV Control Center perfectly times your tape with the projector. Automatically! Inaudibly!

And it's so simple. Pressing a button on the Control Center records the signal at the proper points on one half of the tape. On playback, a special amplifier converts the control signal into electrical energy which operates the automatic projector.

Ideal for the classroom — even student operators can run off a perfect presentation every time.

See yellow pages for your nearest Ekotape dealer —  
the man from Webster.

Send letters to EdSCREEN & AVGUIDE,  
2000 Lincoln Park West, Chicago 14

### Travel Footage, Anyone?

"I am interested in procuring eight millimeter color films of scenes in Paris, Madrid, Lourdes, Vienna, Venice and Milan. Kindly inform me if you have any such films available and if so, their price and amount of footage on each city."

*Lucas F. Bruno, Jr.,  
909 National Bank of  
Commerce Bldg.,  
New Orleans 12, La.*

"I am a teacher, and when I return to the United States I will be giving talks on different countries and important cities I have visited here in Europe. . . . Is it possible to obtain films from you on Italy, also on just the cities of Venice, Florence, Rome? I would like to buy them if possible."

*Mrs. Marion E. Shaw*

"Unfortunately, when I visited Nassau in May, 1955, I did not have my movie camera with me and I would like to supplement our own travel movies with a travelogue on Nassau."

*Mrs. Bruce H. Taylor,  
1611 E. 45 Place,  
Tulsa 5, Okla.*

*Sorry! This magazine has NO films of any kind, to sell or rent. Camera stores that cater especially to the needs of the advanced amateur photographer are the best source of material of this kind. The late Bruno Parth, a cruise photographer of outstanding ability, made a specialty of this type of travel footage. His laboratory was located at Mt. Pocono, Pa. Anyone know of other sources?*

### Foreign Influence

"I am not sure that you are aware of the influence of *Educational Screen* in foreign countries. There are a number of subscriptions which reach very important people in the AV field abroad. At Penn State I met an educator from Siam. He told me that the issue that reached them went the rounds and was considered an important window on to the audiovisual world. A letter from India says that a little group of missionaries recently went together to raise the money for a subscription to *Screen*. It is an important source of ideas and guidance for these church workers in India. I just thought you would be interested in this little footnote.

*William S. Hockman*

# WHICH full closure blind is best for your Audio-Visual Room?

1

2

Where optimum darkness is required your Audio-Visual room should be equipped with the Levolor A.V. Blind identified here as No. 1. This venetian blind has light shields and fascia (or light seal). Where normal darkness will suffice for projection purposes, the Levolor A.V. Blind identified as No. 2 is recommended. Closure is the same as No. 1 but a light seal is used at the head and there are no light shields.

Should you purchase blind No. 2 you can at any time add the light shields.

\* \* \*

Full details and specifications will be sent on request. Write to Audio-Visual Department, LEVOLOR LORENTZEN, INC., 720 Monroe Street, Hoboken, New Jersey.

Be sure to specify

# Have you heard?

## Dr. Nishimoto Visits San Jose

Professor Mitoji Nishimoto, of International Christian University, Tokyo, compares developments in closed circuit television at San Jose State College with those of his own institution. Dr. Richard B. Lewis, head of the audiovisual services division, and Mrs. Terry Martin, television consultant (right) for the college, explain details of the SJC closed circuit system as Dr. James W. Brown (left foreground), head of the college graduate division, and Mr. John Westfall, coordinator of television services, look on. Dr. Nishimoto was at this point completing a round-the-world tour, which included a period of study and discussions at a UNESCO seminar in Paris and other visits in England, Denmark, Belgium and the United States.

## Educational TV Programming Shows Great Increase in '58

In a study based upon program logs from its twenty-seven affiliated stations for the test week of April 13-19, the Educational Television and Radio Center, Ann Arbor, Michigan, reports an increase of 382 hours over 1957. This number represents more than twice the increase of 1957 over 1956, which had been the greatest up to that time.

This surge is due to two facts: (a) six more stations were on the air, and (b) the majority were on the air for longer periods. The average number of weekly program hours in 1958 was 38, compared with 31 in the previous year. Program hours totalled 1027, as compared with 1957's 645 and 197 in 1954, the first year of the survey.

The Ann Arbor report further discloses that kinescopes were more frequently used and that in-school programming increased, especially in the line of course work. The number of hours devoted to credit courses nearly doubled, as more stations offered the courses and Detroit's station WTVS developed an extensive program. As can be expected, scientific and technological programs have recently come strongly to the foreground.

## World Film Festival Held at Vancouver

More than 300 films from 28 countries were screened in the selection of the 100 that were shown during the 1958 Vancouver International Film Festival. It is estimated that at least 20,000 people attended the showings during its two-week run.

First place in the documentary class went to the National Film Board of Canada film "City of Gold," largely a filmograph treatment of still photographs of Dawson City during the Klondike gold rush. Special mention went to Britain's "Journey Into Spring," and the Netherlands' "Rembrandt, Painter of Men."

Feature prize winner was India's "Pathar Panchal," the unanimous choice of the judges for its originality of concept and treatment. Two other features acclaimed were "Don Quixote," produced in the U.S.S.R.; and Rene Clair's French production "Porte des Lilas." In the children's category first place went to Japan's "Little Black Sambo," followed closely by the U.S.S.R.'s elaborate fantasy "Old Khottabych." Silver plaques were awarded the winners.

## Hollywood Motion Picture Workshop

A noteworthy example of the use of local resource people for the enrichment of secondary education is seen in the second annual Motion Picture Industry Workshop, held July 7, 1958, at Fairfax High School, in Los Angeles. Scheduled through the cooperation of Robert E. Kelly, Associate Superintendent of city schools, Roger Hyndman, Supervisor of English for the secondary schools, and Lou Greenspan, Executive Secretary of the Motion Picture Industry Council, the workshop was served

by many of the most outstanding leaders of the film industry.

Jerry Wald and Walter Wanger spoke for the producers; George Seaton and Ray Bradbury for the writers; Eddie Albert the actors; Serge Krizman, art directors; Edith Head, costume designers; Harold Rossen, directors of photography; Stanley Horsley, special effects; Sherman Todd, film editors; Hugo Friedhofer, composers; David Lipton, advertising. Edwin Schallert outlined the gadfly role of the motion picture critic, and Geoffrey Shurlock, administrator of the MPAA Code, explained its purpose and effect.

The "lay" panel members included Mrs. Samuel Oelrich of the P.T.A.; Ian Harris, teen-age Fairfax High School graduate; and Miss Araxi Jamgochian, workshop discussion leader. Mrs. Oelrich deplored the double-feature bill and the sensationalism of movie advertising; Mr. Lipton defended the publicity methods by citing poll results on the kind of advertising that brings biggest box office returns.

Young Ferris expressed the opinion that film stories should be less sophisticated, and not be so afraid of "unhappy" endings; he thought producers should make more rather than less use of background settings of other lands.

Jerry Wald called for greater initiative rather than "hitchhiking" attempts to make this year's hits by initiating last year's successes. Walter Wanger visualized Hollywood as the potential cultural and educational center of the world, provided the producers would re-evaluate their concept of the intellectual level of the motion picture audience.

Ray Bradbury lauded the role of the independent producer, as one willing to take chances on films that aim higher, artistically, than most of those turned out by the "majors."

Miss Jamgochian thanked the industry council for providing top-level resource people in each of twelve vital areas of motion picture production, a major industry in the area in which the school is located. She stated that "If we, as teachers, want a high level of entertainment for our young people it is up to us to help them acquire worthy standards of motion picture appreciation—and we must also turn out full force to patronize fine pictures when they come along. By helping to make them box-office successes we will be getting more of them."

# ANNOUNCING **tsi** Teelite

**RUGGED DEPENDABILITY  
FOR DAY IN—DAY OUT  
SERVICE . . . YET IT  
WEIGHS ONLY  
30 POUNDS!**

**NEW  
EASE OF OPERATION**

Setting up is quicker because of new roller film guards, push-button threading check and outside framing knob. Its fingertip controls are centralized. Two speeds and reverse. Loop-setter, self compensating take-up. *Teelite is a dream to operate!*

**NEW  
BRILLIANT PICTURE QUALITY**

Clear, sharp quiet projection through positive yet gentle film control. Straight line optical system and highly efficient cooling of lamps up to 1200 watts give you perfect projection.

**NEW  
FULL RANGE HI-FI SOUND**

Completely new 15-watt AC-DC amplifier and big 8" speaker (detachable if desired) give you true-life sound in small rooms or large auditoriums.

**SEND FOR FREE LITERATURE**

Get full details on how TSI Teelite will improve the projection of your 16 mm sound motion pictures—and give you years of trouble-free service. Or—ask us for the name of a nearby dealer who will give you a demonstration.

## NEA School Bell Award Given to Station KPIX

At its 97th annual convention, held recently in Cleveland, Ohio, the National Education Association awarded the School Bell prize "for distinguished service in the interpretation of education" to KPIX, San Francisco.

The Westinghouse Broadcasting recipient was cited for its program *Education - Bay Area*, praised as "the most outstanding local or state reporting of education during the school year 1957-58 by a magazine, newspaper, radio or television station, in cooperation with a school system or education association." Philip G. Lasky, general manager of the station at the time the program was prepared and broadcast, also received a citation.

## People in the News

Dr. Albert Rose, Senior Member of the Technical Staff, RCA Laboratories, Princeton, N. J., has been named recipient of this year's David Sarnoff Gold Medal Award by the Society of Motion Picture and Television Engineers.

The Award, given yearly by the Society for outstanding technical work in the field of television, was bestowed upon Dr. Rose for "basic contribution to the development of the Orthicon, Image Orthicon and Vidicon television pick-up tubes."

Dr. Raymond E. Denno has been appointed vice-president of Sutherland Educational Films, Inc., a wholly owned subsidiary of John Sutherland

Productions, Inc. Now a producer of nationally distributed industrial films, John Sutherland Productions is expanding operations to include the production and distribution of educational motion pictures under the direction of Dr. Denno. For the past twelve years Dr. Denno has served as Director of Audio-Visual Services, San Diego County Schools.

Prof. Edgar E. Willis of the University of Michigan and John Young of the University of North Carolina have been appointed to the program staff of the Educational Television and Radio Center at Ann Arbor for one year. Willis is associate professor in the Michigan speech department, where he teaches courses in radio and television. He is author of a textbook called *Foundations in Broadcasting*. Young is assistant director of the University of North Carolina's educational station WUNC-TV in Chapel Hill, which is an affiliate of the Center.

Dr. Merle L. Dundon, Asst. Mgr., Film Emulsion & Plate Manufacturing Div., Eastman Kodak Co., Rochester, N. Y., has been selected for the Herbert T. Kalmus Gold Medal Award by the Society of Motion Picture and Television Engineers. In giving the Award to Dr. Dundon, the SMPTE cited his outstanding contributions to the development of color film products for the motion picture and television industries.

George L. Oakley, Chicago, Illinois, has been named director of audio-visual and professional sales of Bell &

Howell, according to William E. Roberts, executive vice-president. Previously, Mr. Oakley was Manager of the company's professional equipment division. In his new position, Mr. Oakley will be responsible for expanding the school, church and industrial markets for audio-visual equipment (sound motion picture, slide and filmstrip projectors, tape recorders, time study cameras and projectors).

## Noise Affects Understanding

Any one who has found himself misunderstood when talking to someone else has been a victim of "noise."

Prof. Frederick A. White, director, UW Extension Bureau of Audio-Visual Instruction, explained "noise isn't just loud sounds that are unexpected. Noise is anything that acts to garble something you're trying to get across to someone else."

"With a film you can be sure that the same things will be said in the same way, time after time, with a minimum of noise," he said, and "For that reason, it is imperative that you preview every film before you use it. . . . You've got to know what's in it so you can tell your audience what to look for before they see the film. More time should be spent preparing an audience for the film than trying to discuss it afterwards."

## NAEB Convention Plans Underway

The 34th Annual NAEB Convention, scheduled for October 14-17, will be held in the Sheraton-Fontenelle Hotel in Omaha, Nebraska.

The program will include business meetings, general sessions, clinics, committee meetings and several special events that will be outlined later.

The main idea, according to Convention Chairman Jack McBride, is to provide a maximum of information, conviviality and entertainment at a minimum of cost.

The Audio-Visual Association of California, Southern Section, is holding its annual fall conference at San Diego State College, November 21-22. Starting at 2 p.m. Friday, the meetings will center around the theme "In-Service Training Techniques," as demonstrated via the college's new TV facilities. The Friday evening banquet, at the Lafayette Hotel, will be addressed by Mr. Sheldon Campbell, training director at Rohr Aircraft. The Saturday sessions, at Crawford High School, will feature commercial displays and teacher technique demonstrations.

for perfect darkening of any size window!

## FORSE DARKENING SHADES & DRAPERIES

- Made of finest fabrics
- Custom-made, any size
- Complete, ready for installation
- Guaranteed for ten years
- Used by schools everywhere
- Draperies in decorative colors

# RADIANT

# LENTICULAR SCREENS

## FOR LIGHTED ROOM PROJECTION

Of vital importance to all users of audio-visual aids is this new and different kind of "lenticular" screen surface—the result of more than 7 years research and development work by leading optical engineers and physicists. Actual tests have definitely proven that this surface is extremely effective for projecting in undarkened or even lighted rooms where no extreme or unusual ambient light conditions prevail.

## TESTS PROVE

Special electronic testing equipment is used to check the efficiency of all reflective surfaces by Radiant's engineering staff. This equipment measures accurately light gain (brightness), percentage of fall-off, quality of reflection, and other factors vital to good projection results. The new Radiant "lenticular" surface has been subjected to these exacting tests with the following findings:

- 1 Radiant "lenticular" Screens showed a very high brightness gain with a minimum of fall-off at sides.
- 2 Radiant "lenticular" Screens provide increased brightness to an area 45° to each side of axis, thus offering a 90° good viewing area.
- 3 Radiant "lenticular" screen surface reflects colors with increased vividness and greater contrast.

THERE ARE MORE THAN 100,000 TINY LENSES on each Radiant "lenticular" screen surface—that concentrate and reflect light with maximum brilliance over a wider viewing area. This surface is fungus and flame proof and washable.

THE NEW "EDUCATOR" SCREEN—WITH LENTICULAR "UNIGLOW" . . . screen surface is available in sizes from 37" x 50" through 70" x 70". Exclusive TOEmatic leg lock, all-metal slat bar, extreme height adjustability, and many other features.

## HELPFUL BOOKS

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgor Dole. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$6.25.

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgor Dole. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Harkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Harkheimer and John W. Diffor. Tenth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Frazier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

Theme of the annual fall meeting of the Illinois Audio-Visual Association is "The Role of the Audio-Visual Coordinator—Urban and Suburban." This two-day conference will be held at the Acres Motel, 5600 North Lincoln Avenue, Chicago 45, Illinois, on Friday and Saturday, October 24 and 25. Four sessions are planned which should interest teachers, building coordinators, audio-visual directors, and administrators: (1) workshop for coordinators—Friday morning; (2) demonstrations of the proper use of audio-visual instructional materials in the areas of math and science, social studies, and language arts—Friday afternoon; (3) demonstration of stereophonic sound and its possible applications to education—Friday evening; (4) panel discussions on problems of the building coordinator and part-time director, including possible solutions—Saturday morning.

### Calendar of Coming Events

Oct. 7-10—Industrial Film and Audio-Visual Exhibition, Trade Show Building, New York City.

Oct. 14-17—National Association of Educational Broadcasters, 34th annual convention, Omaha, Nebraska.

Oct. 17-18—Fall meeting of NAVA Board of Directors, Morrison Hotel, Chicago, Ill.

Oct. 20-24—National Safety Congress and Exposition, Morrison Hotel, Chicago, Ill.

Oct. 20-24—SMPTE, 84th annual convention, Sheraton-Cadillac Hotel, Detroit, Michigan.

Oct. 23-25—NAVA Institute Board of Governors meeting, Indiana University, Bloomington, Ind.

Oct. 24-25—Illinois Audio-Visual Association annual meeting, Acres Motel, Chicago, Ill.

Nov. 9-11—Texas A-V Education Association, annual meeting, Dallas.

Nov. 15—Planning committee for 1959 NAVA Western Conference, Olympic Hotel, Seattle, Wash.

Nov. 21-22—San Diego, Calif., State College, annual fall conference, Audio-Visual Association of California, Southern Section; Gladys Rohrbough, Executive Secretary, 801 S. Lorena St., Los Angeles 23, Calif.

Dec. 28-31—Speech Association of America, American Educational Theatre Association, and allied groups, national convention, Conrad Hilton Hotel, Chicago, Ill.

Feb. 11-19, 1959—AASA national convention, Atlantic City, N. J.

April 1-1, 1959—American Film Festival, New York City.

### Rotha Films Will Open Series at Museum of Modern Art

Beginning October 8, New York City's Museum of Modern Art will present an eight-program series, "The Films of Paul Rotha," during a period of four weeks. Among the films included in the series are "Contact" (1932), "Shipyard" (1934-5), "The Face of Britain" (1935), "Today We Live" (1936), "New Worlds for Old" (1937), "World of Plenty" (1943), "Land of Promise" (1945), "The World is Rich" (1947), "A City Speaks" (1946), "No Resting Place" (1950) and "World Without End" (1953).

The British director-producer is also well known as the author of such works as *The Film Till Now*, *Celluloid: The Film Today*, *Documentary Film and Movie Parade*. Richard Griffith, Curator of the Museum Film Library, claims that "The first actual Rotha films astonished and perhaps shocked early admirers of his writing. For Paul Rotha had joined what has become known throughout the world as 'the British documentary film school': a school devoted not to film for film's sake, but to films which served purposes beyond themselves . . . justice, equality, social improvement and development, what we call civilization. . . . His films from 1943 increasingly featured an international approach. Even when his subject was specifically British, it got itself expressed in terms of a shrunken world where we all now stand naked to the winds of doctrine and of destiny. . . . Rotha tries to speak for modern man, lost in the chaos of the machine civilization he has created, and now seeking to create a new life on a more human scale. For these films of complex social and economic argument touch at every turn the humblest levels of living—birth and death, feast and famine, beauty and ugliness, the elements of experience common to all."

### IAVA Fall Meeting

Gov. Robert D. Meyner of New Jersey will welcome members of the Industrial Audio-Visual Association at a three-day fall meeting at Princeton on Oct. 14-16. He will address the opening session at the Princeton Inn, and his talk will be followed by a screening of the official state film, "This Is New Jersey," which was selected for exhibition at the Brussels World's Fair.

The three-day program will include presentation of other outstanding motion pictures, technical report on selection of color for visuals, visits to Princeton University's "Perception Laboratory," the Opinion Research Corporation and the Bell Telephone Laboratories.

# Greatest Brilliance Ever Achieved in a Classroom Projector!

GRAFLEX SVE

## SCHOOL MASTER

For filmstrip or slides, there's no finer classroom projector than the School Master. Specifically designed for educational use, these projectors utilize new Sylvania Tru-Focus lamps and a newly designed optical system to give a brilliance of screen image never before achieved! Visual material is always presented with maximum effectiveness and impact with a School Master!

Easy operation and simple design characterize these projectors. Filmstrips or slides may be projected interchangeably—and the change from one to the other may be made quickly and easily . . . without removing or adding parts.

Handy telescoping handle facilitates carrying from place to place. Framing and threading of filmstrips is simple and easy. The whole optical system removes as a unit for cleaning. Cooling is accomplished by a powerful 4-blade fan. Comes equipped with 5" f/3.5 color corrected and coated lens. Lenses in other focal lengths and f-values available.

### Prices

School Master 750 (750-watt model—Cat. No. 3828) \$99.50; the 750 RC (750-watt model with remote control—Cat. No. 3826) \$134.50; and the accessory Rewind Take-up (Cat. No. 3880) shown attached in the illustration above is only \$7.50.  
The School Master 500 (500-watt model—Cat. No. 3809) \$84.50; and the 500 RC (500-watt model with remote control—Cat. No. 3808) is \$119.50. Both models accept accessory Rewind Take-up.

## backbone of Audio Visual Programs

### GRAFLEX AMPRO SUPER STYLIST PROJECTORS

Designed for heavy usage, Super Stylist 16mm. sound Projectors have long been the major unit around which audio-visual programs are planned. These projectors are completely flexible—have both sound and silent speeds. They are easy to thread. Their triple-claw movement engages three film sprocket holes simultaneously permitting damaged film to go through easily and smoothly. Film gate and optics are easily accessible for cleaning. Film bearing surfaces "flame plated" for film protection and long life. Aspheric condenser lens. Interchangeable projection lenses. Jack for microphone or phonograph.

**Three Models:** Super Stylist 8 (Cat. No. 3970) has an 8-watt amplifier and 8" speaker. Super Stylist 10 (Cat. No. 3971) is equipped with a powerful 10-watt amplifier and 10" speaker. Super Stylist 12 (Cat. No. 3972) features a 10-watt amplifier and has separate case-mounted 12" speaker.

For additional information on School Master or Super Stylist Projectors and their accessories, write Dept. ES-108, Graflex, Inc., Rochester 3, N.Y. A subsidiary of General Precision Equipment Corporation. Prices are subject to change without notice.

**GRAFLEX**

# Dollars for

The Commissioner of Education has eighteen million dollars for research and experimentation in the audiovisual field. With such a fund, and considering the provisions of the National Defense Education Act of 1958 for spending it, the whole field of audiovisual communications may be at the threshold of a great new future.

We said last month the most important part of the Act was that which provided funds for materials and equipment in Title III. Maybe we were wrong. Title VII of the Act provides for "Research and Experimentation in More Effective Utilization of Television, Radio, Motion Pictures, and Related Media for Educational Purposes." An initial amount of somewhat less than \$500,000 has been appropriated for this purpose for the current year, and \$5,000,000 authorized for each of the next three years. This is money for ideas; and ideas may be even more important than materials and equipment.

The law says the Commissioner may make grants-in-aid with this money, or he may enter into contracts for projects of research or experimentation. The grants may be to "public or nonprofit private agencies, organizations, and individuals." The contracts may be with "public or private agencies, organizations, groups, and individuals." In defining the kind of projects to be considered, section 701 states that these should be "projects involving television, radio, motion pictures, and related media of communication which may prove of value to State or local educational agencies in the operation of their public elementary or secondary schools, and to institutions of higher education, including the development of new and more effective techniques and methods —

(1) for utilizing and adapting motion pictures, video tapes and other audio-visual aids, filmstrips, slides and other visual aids, recordings (including magnetic tapes) and other auditory aids, and radio or television

program scripts for such purposes;

(2) for training teachers to utilize such media with maximum effectiveness; and

(3) for presenting academic subject matter through media."

That covers a lot of territory and it places tremendous responsibility, but not all of it, with the Commissioner of Education. The Act says that he should carry out the provisions of Title VII *in cooperation with* the Advisory Committee on New Educational Media. This committee of twelve members, three of whom "shall be individuals of demonstrated ability in the utilization or adaptation of television, radio, motion pictures, and related media of communication for educational purposes," has specific and important functions to perform. It has broad powers to advise, consult with and make recommendations to the Commissioner concerning all matters related to Title VII. It will review and certify all applications for grants; and will review and certify all proposals for contracts. With such powers and responsibilities the decisions of the Advisory Committee on New Educational Media can shape the future of the audiovisual field. It is significant that only three of twelve members are to come from the audiovisual field.

The money is available, the rules have been set down, and the next step is yours. The law apparently doesn't expect the Commissioner and his Advisory Committee to dream up all the ideas for projects of research and experimentation. That can be your responsibility. Now is the time for you to think creatively and work with others to develop the kind of projects that will surely bring about the more effective utilization of audiovisual media of communication as Congress intended when it included Title VII in the National Defense Education Act of 1958.

*Paul C. Reed*

# Your Ideas!

These charts, reproduced from the NAVA News of September 1, were adapted from materials provided by the U. S. Office of Education. The Office's publication, *School Life*, will devote the October issue to the National Defense Education Act.

## "STARTER" APPROPRIATION FUNDS NOW AVAILABLE

Allotments to states under APPROPRIATION of \$40,000,000 for grants under National Defense Education Act, for fiscal year ending June 30, 1959

NOTE—Only those allotments are included which are calculable by specific formula-provisions in the Act.

# an elementary instructional materials center

by Edwin Carmony

Supervisor of Audiovisual Instruction,  
Gary, Indiana, Public Schools

**M**OST educators accept the principle that wide and wise use of audiovisual materials improves instruction.

The serious problem in many school situations has been that of getting well-selected materials to the teacher. Someone must perform the many necessary functions which audiovisual people call coordination.

If the school program is built around the self-contained classroom there is no one whose teaching can be modified to provide released time for audiovisual coordination. Neither is there provision of facilities for the services required by the teachers. An equally serious problem has been the reluctance of school officials to provide full-time library service to average sized elementary schools.

The Gary Public Schools have had excellent results for several years from programs initiated in some unit schools (K-12) by either the high

school or the elementary librarian. These school librarians accept responsibility for the provision of certain audiovisual materials and services as part of their instructional materials philosophy.

School officials, who were unable to justify provision of a full-time book librarian or even a part-time audiovisual coordinator, have accepted the combination of services as justifying a full-time instructional materials specialist.

As a result, the Gary Public Schools are building elementary schools designed around the instructional materials center as the heart of the instructional program. The Roosevelt Park Elementary School instructional materials center was planned by the author, Supervisor of Audiovisual Instruction, Miss Leila Doyle, school librarian and Leonard Klarich, architect. Mr. Klarich took the ideas provided by the two school people, and within the limits of allowable space, made every effort to design the instructional materials center around them.

The resulting facilities will enable a specialist trained in both audiovisual and library techniques to provide a well-rounded program of teaching aids to the faculty and students. A very important element of this program is that the elementary schools were really unable to provide adequate services in either the audiovisual or the library field. By combining the two functions, it is now possible to provide a greatly improved version of both.

Teachers and students of Roosevelt Park Elementary School will have their curricular needs served by a full-time specialist in an adequately equipped library. This library will contain the reference, supplementary and free

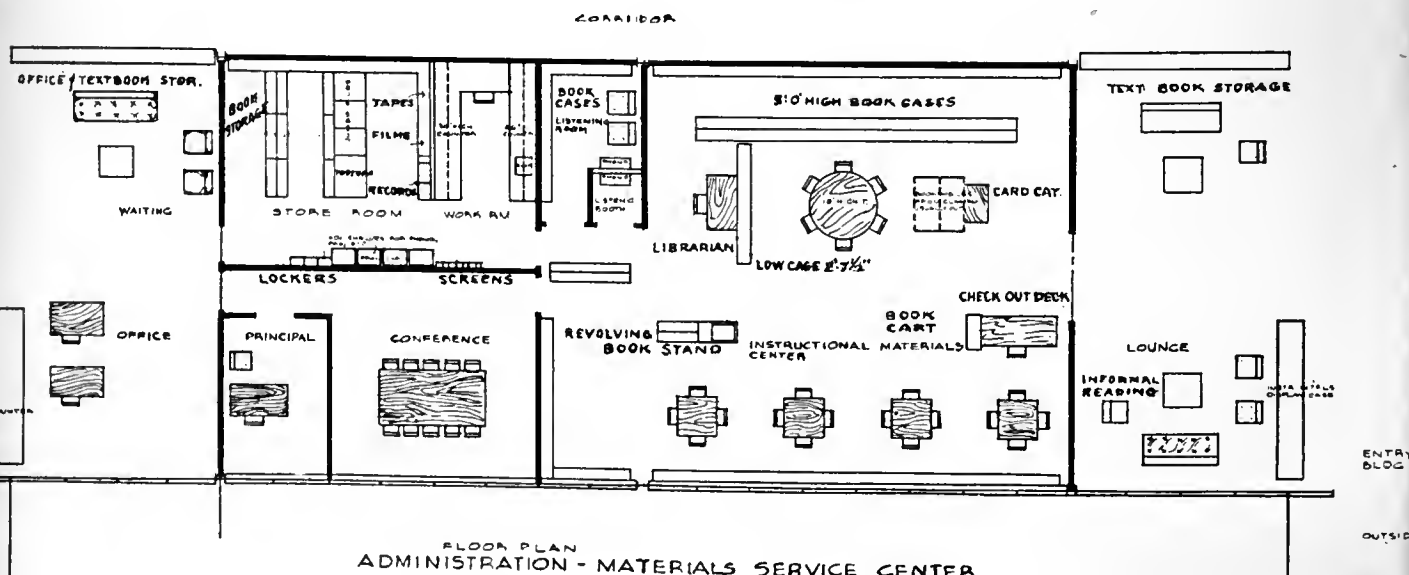

reading books found in any good school library. Pamphlets, pictures and models will be provided.

In addition to the usual library materials, the materials center will make available selected recordings, tapes, filmstrips, slide sets and other teaching aids generally considered audiovisual. Services will include responsibility for the scheduling of films and filmstrips from the central library. Audiovisual equipment will be available from the materials center and will be used under the direction of the center staff. A small workroom for the use of teachers and students in preparing materials is provided, as well as a listening room and an enclosed listening booth. Using ALA standards, space for 7,584 books is included. Additional space for textbook storage will accommodate 3,240 books.

Placing the center near the principal's office permitted the combination of preview, work and conference space for use by students, teachers or parents as needed. The outer lounge will increase the seating capacity while providing a relaxing atmosphere for reading or work by teachers or students. Display space near the entry way will make possible a continuous exhibit of teaching materials or student work and will serve to invite the passing public to "take a look" at the materials and services available to the school.

Gary School officials anticipate that the services provided by elementary instructional materials centers will be reflected in the improvement of the quality of instruction in the classroom.

Architectural Solutions  
for Audiovisual Problems

# **NEW** from Kodak ... a single-case, portable 16mm Pageant Projector with **BIG SOUND** and **PICTURE** **CAPACITY !**

Here's a portable 16mm sound projector with plenty of power for use anywhere.

The new Kodak Pageant Projector, Model AV-255-S, has a 25-watt amplifier that delivers *all* the sound you need. Used with the matched, heavy-duty 11" x 6" oval speaker in baffled case, it's right for large rooms like lecture halls, laboratories, and libraries.

Teamed up with the Kodak 12-inch Deluxe Speaker (or built-in speaker systems), it's fine for auditoriums and gymnasiums.

## **BIG pictures to match**

With this new Pageant you can use the extra-powerful 1200-watt lamp. This, along with the Super-40 Shutter that puts 40% more light on the screen than ordinary shutters, gives you plenty of light for "long throws" and big screens.

## **No time out**

ALL Pageant projectors are *permanently* lubricated. This ends forever the biggest single need for maintenance. You never take time out for oiling—never

*Kodak Pageant Projector*

**EASTMAN KODAK COMPANY**  
Dept. 8-V, Rochester 4, N. Y.

keep records. Your Pageant is ready to go on with the show *whenever* you are.

## **Compact, colorful, budget-priced**

The new Pageant, Model AV-255-S, comes in a single case, finished in an attractive tan. It lists for just \$535\*—a small price for such BIG performance!

**See it and hear it** at your convenience at any Kodak AV Dealer's. Or, write for details.

\*Price is list and is subject to change without notice.

# TELEVISION IN PHYSICAL EDUCATION

## INTRODUCTION

During the planning stages of the U. S. Air Force Academy Permanent Site in Colorado Springs, it was decided to install in certain buildings, including the Physical Education Building, viewing windows and television coaxial cable conduit in order that terminal television equipment and supporting facilities could be added at a later date as funds became available. It was necessary, however, to describe the projected uses of a closed circuit television system in physical education to justify the allocation of funds for this purpose. The material which follows represents the thinking of the Air Force Academy physical education faculty as it prepared a brief justifying a closed circuit television system for the new Physical Education Building now under construction. It is believed that the material presented here will prove helpful to other institutions considering the development of closed circuit television.

Unfortunately, television has been used little as a medium for teaching physical education in institutions of higher learning. In fact (as of 1956) only 77 of some 1800 odd colleges and universities have utilized television as an instructional medium for students. Thus the ideas incorporated in this article are not based upon established practice in physical education. Rather the ideas are the product of much thought by the physical education faculty at the Air Force Academy, plus those techniques adopted from other areas of television instruction which have proven successful.

### Television—A Captivating Medium

When one considers that television is less than two decades old, it becomes difficult to visualize all of the possible uses of television as an instructional tool. However, experience gained from the use of the motion picture indicates the possibilities of television as an educational medium.

It is interesting to note that the earliest uses of commercial television were in the realm of sports, especially baseball, football and basketball. Such large television audiences were attracted to view intercollegiate football games that the size of crowds to witness local high school and small col-

lege football games became extremely small. So small, in fact, that the National Collegiate Athletic Association was forced to regulate the number of games to be televised and the size of the viewing audience. Another indication of the attractiveness of sports telecasts is the fact that American productivity is reduced considerably during the World Series each fall.

Although the initial impact of sports telecasts was to reduce attendance at "live" games, there seems to be added interest in all types of sports. More and more people seem to be enjoying participation in sports activities to which they were introduced through the medium of television. Such circumstances support the idea that sports telecasts are interesting and have captured the imagination of the American public.

### Sports Telecasts Only a Supplemental Justification

Mere presentation of sports contests is not justification in itself for developing the closed circuit television system. Such presentations are concomitant to the primary use of television—namely, to improve instruction and learning in physical education. Only after one can justify expenditures for television on the basis of improved teaching and student performance in games and sports, should the spectator aspect of television be considered.

### Physical Education at the United States Air Force Academy

The curriculum in physical education at the Air Force Academy is a substantial portion of the Air Force cadet's required preparation during his four years of formal education. Not only does each cadet receive instruction in more than 15 different sports activities, but he is required to attain a minimum level of proficiency in all of these activities. Coupled with formal instruction in physical education is an extensive program of intramural sports in which each cadet must participate unless he is in intercollegiate athletics.

Stated succinctly, the four-year program of physical education at the Air Force Academy seeks to develop phys-

By M. M. MacKENZIE

Department of Physical Education  
United States Air Force Academy

ical fitness, sports knowledge and skills, and leadership abilities related to teaching and coaching sports as well as administering Air Force athletic programs. This presents a need for expert instruction and the use of all possible media of communication for learning.

### The Nature of Motor Learning

The nature of motor learning is at best a complicated task. It involves, among other physiological and psychological processes, the art of imitation. Efficient motor learning also requires frequent analysis of error in performance. When the learner understands what he is doing wrong, he can then correct it. It is believed by some that when the athlete can see his own performance he can better interpret the analysis of his teacher and more readily can correct and improve his performance. Thus by seeing others perform and by observing his own performance, the learning of motor skills becomes more rapid.

### Use of Motion Pictures Based Upon Principles of Motor Learning

The use of motion pictures in the area of physical education has been widespread and has been predicated upon the principles stated above. It can be stated reliably that practically all successful football and basketball coaches have utilized films to coach their players. In addition, countless numbers of films have been produced portraying skills in all sports.

### Television—An Extension of the Motion Picture

Television allows for both the use of pre-fabricated films as well as the application of kinescopic recordings and "live" demonstrations. More recent technical developments permit rapid electro-magnetic reproduction of what the television camera "sees" in a matter of seconds. In this light, television then becomes an extension of the motion picture upon which the physical educator relies.

# EDUCATION

## PROPOSED USES OF TELEVISION IN PHYSICAL EDUCATION TO IMPROVE INSTRUCTION AND LEARNING

### Instruction

Instruction in physical education may be enhanced in a number of ways by the use of television. The most skilled instructor can demonstrate desired skills and techniques to a large number of cadets located at different teaching stations. These demonstrations may be either "live" or they may be kinescopic recordings.

Another method for streamlining instruction would be the showing of films or kinescopic recordings at a pre-arranged time from a central studio. This will eliminate the necessity of setting up, threading, and operating a motion picture by the instructor. The darkening of the activity area is also eliminated.

Since kinescope recording is rela-

tively inexpensive, considerably more kinescope films could be utilized. The Department of Physical Education can produce its own "films" to fit the occasion and not have to rely on expensive commercial films which may or may not be adaptable to the learning situation.

With the use of rapid electro-magnetic reproduction equipment, it will be possible to show the cadet a motion picture of his performance immediately after the performance. The instructor then can point out errors as the learner observes his own performance. The immediacy of observing one's own performance is important to learning and should stimulate more rapid learning. These same kinescopes may be used in future class-

es to point out common errors or to illustrate proper techniques.

Hospitalized cadets may view demonstrations and/or the entire class situation with a closed-circuit television system. This of course will not replace actual participation as the best means for learning. However, there is much to be said for the effectiveness of observing performance and its relationship to motor learning. Mental practice and observation has been demonstrated to be an effective motor-learning process.

### Swimming Illustration

One activity which lends itself uniquely to the use of "live" television demonstrations is swimming. With a camera signal point located in an un-

derwater observation room the viewer may observe the swimmer at the surface and simultaneously view the motions of that same swimmer as seen from below the surface. Such a demonstration, supplemented with a verbal explanation by the instructor, should prove beneficial to learning.

#### **"Free Time" Instruction**

Additional instruction in physical education could be telecast to cadets during their "free time" in the afternoons and weekends. Demonstrations of advanced techniques could be programmed as well as additional information not covered in the normal hours of instruction. Such telecasts also

could be used to review courses of instruction for those cadets who care to observe. These "free time" telecasts thus would serve to broaden the interests and knowledge of the cadets.

#### **Evaluation of Learning**

From the standpoint of analysis and formal evaluation by the instructor, kinescopic recordings should prove useful. The kinescope can supplement the instructor's "live" observation of a cadet during a formal evaluation. For example, it is difficult in the time allotted to evaluate objectively five cadets participating in a basketball scrimmage. However, review of a kine-

scopic recording after class is completed would facilitate the evaluation.

#### **In-Service Education**

Not only can the learner benefit from kinescopes, but the instructor can be evaluated and counselled. No extra time or effort would be needed since the kinescope of a class could be reviewed by supervisors and instructors to determine the strengths and/or weaknesses of the instructional staff. Furthermore, these same kinescopes may be used to illustrate to new and inexperienced instructors those methods of teaching that are considered to be good or bad.

## **SUPPLEMENTAL USES OF TELEVISION IN PHYSICAL EDUCATION**

In addition to using closed circuit television for improvement of learning and instruction, there are additional opportunities to fully utilize the television equipment. Such uses relate to briefings, adult education and intercollegiate athletics.

#### **Monitoring and Briefing**

Many persons visit the Air Force Academy and desire to observe classes in physical education and other subjects. Such observation is not always possible if large numbers of visitors are involved. Nor is such personal observation most propitious for learning since classes may be interrupted. However, with a monitoring system, it would be possible for visitors to get an overall view of the program without traversing the entire campus and interrupting instruction. In addition to the monitoring of class activities, film clips could be produced and put together for briefings. This briefing concept need not be restricted to the instructional program. The Superintendent, Commandant of Cadets or Dean of Faculty could employ the same techniques when briefing visitors.

In addition, members of the Air Force Academy staff could be informed, at prearranged hours, of various programs conducted for cadets. Such in-service education of staff personnel should prove worthwhile from the standpoint of enlightening all Academy personnel with the activities of the institution.

#### **Intercollegiate Athletics**

In addition to using television to improve the performance of varsity athletes, the beaming of intercollegiate athletic contests to the surrounding area (or nationwide) would serve as an excellent means of public relations. The Air Force Academy could capitalize on the American public's interest in sports and use the athletic contest as a window through which the public can view the Air Force Academy. Prior to the start of the game, during intermissions, and immediately following the contest, the public could be informed of the mission of the Air Force Academy and could observe short kinescopic recordings of cadet activities. With a "captive audience" a considerable amount of public relations effort could be put forth.

#### **Adult Education**

As currently designed, the closed circuit television system at the Air Force Academy Permanent Site will reach the community complex wherein will reside some 2,000 staff and faculty personnel, plus their families. This presents a unique opportunity to inform and educate the faculty and staff, if they so desire, in a wide variety of subjects and activities. The physical education department, along with all other departments in the curriculum, could prepare adult education telecasts for showing during the evenings and weekends. Such telecasts would serve to broaden the knowledge of the Air Force Academy personnel and thus create a more enlightened group of persons. Practically all physical education activities could be presented on television. Although the development of skill will be negligible, at least it would be possible to develop an appreciation of the various games and sports. Such appreciation should in turn lead to the development of enlightened spectators and might possibly serve as a fuse to ignite a desire to learn how to play a particular game or sport.

## **SUMMARY AND CONCLUSIONS**

#### **Proposals**

This report has indicated proposed uses for future closed circuit television in physical education at the Air Force Academy. It is believed that television can be utilized effectively in the areas

of cadet instruction, evaluation of cadet learning and proficiency, faculty in-service education, research, briefings and adult education.

The proposed uses of television stemmed from the principles of motor

learning and were based upon the ideas of the faculty of the Department of Physical Education. Ideas also have been developed from a review of literature published on the subject of educational television.

by *Laura Osborn*

Associate Professor of Education, Wayne State University, and Supervisor, World Studies, Detroit Public Schools

Children in the Detroit public schools project their own cartoon story on an opaque projector, arousing interest in the lives and customs of children south of the border.

Our "first hemispheric ambassadors" follow their migratory routes in this interesting game.

## Building International Goodwill

WHEN DETROIT was chosen by the United States Office of Education as one of twenty-two cities and towns to initiate programs to acquaint our children with the other republics of the Western Hemisphere, it was immediately apparent that a wide array of audiovisual materials could be utilized to stimulate and hold interest.

This semester the Detroit project, "Building International Goodwill in the Elementary and Secondary School programs," enters its fifteen year and now encompasses both hemispheres. We feel at the moment as we do at the beginning of each new school year—that we have just about run the gamut of audiovisual approaches. Yet we are certain that before the semester ends enterprising teachers in our 300 schools and in an equal number in Detroit's suburbs will have devised more new and attractive devices to make learning in this curriculum area more pleasurable and productive.

This city, situated on the world's longest unfortified boundary, is fortunately located so as to aid in the

exploration of the many ways to build international understanding. Moreover, as the center of many export activities reaching to the corners of the earth, we are favored each year by visits of many foreign guests, distinguished in various fields. Most of these readily accept invitations to address my large class of teachers at Wayne State University in "Building International Goodwill in the School Programs."

A typical class period usually includes a brief survey of the specific country under discussion, an informal talk by a guest speaker from another land on how Americans and his own people may learn to understand each other, and a motion picture of the life and customs of the land to highlight the talk. The individual teacher, thus prepared, then devises means of how best to translate this basic information into interesting programs in his or her own school. Here the audiovisual approaches have been found extremely effective. With the cooperation of our Department of Audiovisual Instruc-

tion, some 200 documentary motion pictures of other lands have been used during the program.

The latest addition to the library of films is a new picture in color and sound, "Sons of Montezuma," which I made during a trip to Mexico. The chief emphasis is on the historical background of Mexico City and the present educational and other cultural activities of the great metropolis.

Children themselves, inspired by ingenious teachers, have created many of the visual aids that are used in the Detroit Schools in the international good will program. Seventh and eighth graders in one school wrote a radio skit and presented it to their classmates in a mock studio scene with imitation microphones. The production, "The Remembering Skirt," takes but a few minutes for delivery, but the impression is long remembered. Classes in other schools are using the script, thereby passing on to many more pupils the research into the customs and lives of people beyond

# Geography

## Through

## Games!

After the teacher designates "safe" and "off-limit" states, the "Fox" tries to catch the "Geese" before they reach safety.

**A** GIANT MAP of the United States, possibly the largest visual teaching aid in the country, is in use on the playground of Benjamin Franklin Elementary School in Pueblo, Colorado. Devised by principal Jack Isenhour in answer to his teachers' complaints that children have trouble learning directions and locations with

regard to maps, this useful and interesting creation measures 35 feet in width, with Texas 9 by 9 feet and Rhode Island just large enough for a student to put his foot in.

Beginning with a small outline map of the States, Isenhour projected it on the wall with an opaque projector and made another map about 12 by 18

Educational Screen, with the cooperation of Jack Isenhour, presents an unusual method of combining geography lessons and fun.

inches. He then repeated the process until he had the state of Texas large enough for one of his pupils to lie down in. Leaving the opaque projector in the same position, he placed the states in the machine and got a large map drawn to scale. A stencil for each state was made out of heavy paper, the capitals were indicated by

First, the students learn basic geography from a classroom map. Then Miss Mildred Verbeck, third-grade teacher at Pueblo's Benjamin Franklin Elementary School, reinforces classroom studies by a playground quiz. Students answer questions by running to the location on the giant map.

In this cross-country race, students run to states chosen by teacher. The last arrival is eliminated in each dash until there's a winner.

dots, and the map was assembled on the blacktopped playground. Finally, Isenhour traced around the stencils with chalk, and finished the job with yellow traffic paint.

Not only is this worthwhile project extremely inexpensive, but it is simple enough to be done by the children themselves. And they use it enthusiastically, during recess as well as social studies periods. In reply to widespread interest, with inquiries from over 25 states and frequent visitors to the school, some of the most successful games have been set down as examples:

(1) *Small group or relay races*: a team or individuals line up on a starting line in the Pacific Ocean. Upon a signal, they are to race from California to New York and return to the starting point without stepping in Nevada, Kansas or the Carolinas.

(2) *Obstacle type races*: beginning in California, hop across Nevada, jump over Colorado, duck walk through Kansas, crawl through Missouri and sit in Arkansas. An individual or a team may be given written or oral instructions. Starting on a signal, the first team completing instructions wins.

(3) *Locating points*: the object is to be first to arrive at point described (i.e. a point where four states meet, a state with bodies of water on two sides, the state with the tallest mountain).

(4) *Using a ball*: a group stands around the outside of the map, bounding a ball from one person to another, hitting a state named by a caller.

This novel method, which makes learning geography literally a down-to-earth experience, can undoubtedly be adapted for use in the teaching of other subjects. Principal Isenhour is to be thanked for sharing his ingenuity with our readers. Pictures are by courtesy of *Friends*; photographer, John Rees of Black Star.

## Building International Goodwill

(Continued from page 519)

our own borders. It was a big day for the young creators of the program when "The Remembering Skirt" won a national prize.

The best of the scripts so produced are made into recordings for general school use. The lives and incidents in the careers of the great liberators, to mention a single phase of this activity, help the pupils to remember the history and background of the other Americas and to learn how the institutions of our neighbors differ from, or are similar to, those of the United States.

In science courses, the appealing topic of migratory birds, "our first flying ambassadors," is explored by means of a fascinating racing game. Birds familiar to the pupil and some less familiar, such as the famous hemispheric traveler, the golden plover, are moved along their actual migration routes on a large map of the Americas, a wheel which each pupil spins advancing his bird various distances toward its goal as the game proceeds.

For language studies, a mural was made on cloth by a seventh grade class. Each two children chose an English word, borrowed from the Spanish, for one of the letters of the alphabet and drew the animals and other familiar objects in the lands to the south in crayon. The children thus build a small vocabulary of Spanish words and learn how our own language has been enriched by more than 500 terms borrowed from the language of our hemispheric neighbors.

To assist further in the visualization the peoples of other lands, I have assembled a collection of character dolls from various countries. Art classes draw and paint these dolls and

home economics classes make costumes with these as models.

Children in one school concentrated on Mexico, Brazil, Peru and Ecuador. They brought articles from home to make a collection of sombreros, serapes, pottery, woven work, jewelry and leather work. There were, of course, stamp collectors whose hobby was thus directed into the problems of international communications.

A pair of inventive pupils gave a book review in novel form. They visualized the book by a series of drawings showing the adventures of a Mexican boy, Pancho. These were made into a strip and opaque projection is used to show the color drawings on a screen.

The spirit of the program, thus enlivened by the use of appropriate audiovisual methods, is revealed by the foreword of a report which the children of one of the Detroit schools put in book form and printed on their own press:

"We, the girls and boys of Hutchins, want to be good neighbors, not only with the people next door, but with those who live far to the north and south, the east and west.

"Before we can be good neighbors, we must know and understand people. In social studies, English, general language, music, gymnasium, library, art and shops we have sought information about our American neighbors. We have learned about history and government; their ideals, customs and beliefs; their music and art.

"We have given programs in the auditorium in which we have enjoyed their music, literature and dances. We have viewed films picturing their lands and resources. We have met people from these countries. Our American neighbors are becoming real acquaintances and friends."

# RUGGED!

*Left:* 399EZ—Filmovara "Zoom" lens, "Cold Glass" heat filter, single frame advance and many other exclusive features.

*Right:* 399—Reverses for review, shows still pictures, offers brilliant picture and sound. The world's most widely used sound projector.

## FILMOSOUND SPECIALISTS

the 16mm sound projectors that never quit running!

This is the *family* of Bell & Howell Filmosound Specialists—the most widely used and certainly the most *dependable* of sound projectors. They never quit running! Chief reasons: film handling parts are *sapphire jeweled* to give 400% longer life. And with factory-sealed lubrication, every moving part is continually and automatically oiled from *within*.

The Specialist lasts . . . and lasts. Maintenance cost is negligible. Parts last longer. And because the Specialist is designed to *maintain* its top condition year

after year, the trade-in value stays unusually high.

With a choice of 3 models and different combinations of features, there's a Specialist that's perfect for your requirements. Where cost is a factor, Bell & Howell can help you by providing only the features you definitely need.

Rugged . . . versatile . . . tailored to your needs. That's why more Bell & Howell Filmosounds are in use today than all other sound projectors *combined!* Ask to see a demonstration of its many features.

Above: 398—The newest Specialist model; the finest projection performance at lowest cost quality allows. Magnificent new *pan-harmonic* high fidelity sound.

**EXCLUSIVE SPECIALIST FEATURES:**

1. *Sapphire insets* at 5 vital points deliver 400% longer life.
2. *Filmovara "Zoom" lens\** adjusts picture size to fit the screen.
3. *All-gear drive* for steady, flicker-less pictures.
4. *Straight line Optical system* for maximum light output.
5. *"Cold glass" heat filter\** for 7 times brighter still-picture image.
6. *Single frame advance\** and frame counter for time and motion analysis.
7. *Automatic loop setter,\** no lost loops even with damaged film.
8. *Hour meter\*†* records operating time.
9. *Automatic rewind release* sets projector for forward after rewinding.
10. *Rugged 7-ply (Plywood) case,* actually stronger than metal.

\*Standard on 399EZ, optional on 399

# Informing the Philippine People

by *William G. Hart*

Audio Visual Advisor, International Cooperation Administration, Philippines

**T**RAVELING the back roads of the rural Philippines are some thirty mobile audiovisual vans. Nightly these vans project motion pictures and distribute printed materials to the hundreds of farm folks who flock in from surrounding communities. These presentations cover a variety of subjects, such as increasing food production, improving health conditions, bettering landlord-tenant relations, promoting self-help projects. And although the mobile units are operated by a number of different government agencies, most of the motion pictures, pamphlets and posters are products of the National Media Production Center.

A unique experiment in the field of mass media, the National Media Production Center (NMPC) was originally a project of the Foreign Operations Administration (now International Cooperation Administration), the American aid agency in the Philippines. The NMPC has now become a regular Philippine government office, financed by the local budget and located in the Department of General Services.

Visit the NMPC at almost any hour

and you will find representatives of the various Philippine government agencies conferring on technical problems in the field of public information. Let us follow an actual example of mass media planning at NMPC.

The Center is visited by a group of officials from the Department of Agriculture and Natural Resources. This agency has long been concerned about the relatively low yield of the rice fields of the Philippines. The nation is importing rice; valuable currency reserves are being consumed. Yet the Philippine nation could easily be self-sufficient in rice production if farmers could be educated to use improved growing techniques already known. What media should be used to teach Filipino farmers to use these improved techniques?

This problem is considered in a series of conferences between NMPC and Agriculture officials. A flip chart and pamphlets are kept near at hand to encourage an orderly approach to such conferences. Three general questions are raised to crystallize and sharpen thinking. The first question is

phrased to delineate the message to be presented: "Precisely what do you want to communicate?" A second question deals with the target audience: "To what specific group do you want to convey your message?" When these two questions have been adequately discussed, the final question is considered in terms of the money available, the literacy of the target audience and similar factors: "Which combination of media will most effectively communicate your message?"

In our example involving rice production, the following program was evolved and carried out. A factual "how-to" motion picture was produced, together with a pamphlet summarizing the techniques presented in the film. The film is being shown and the pamphlets distributed by the mobile audiovisual units of the Bureau of Agricultural Extension. In addition, agricultural extension workers are setting up demonstration plots, where farmers can see for themselves the results of improved growing techniques. Pamphlets are distributed to farmers who visit these demonstration plots. Posters in local dialect are displayed in centers of population. The regular radio programs of the NMPC include spot announcements urging farmers to adopt more effective rice growing techniques and offering the pamphlet upon request. And whenever the NMPC stage show is on the road, simi-

**A whole neighborhood in a small provincial town turns out to listen to recordings of plays, music and miscellaneous informational material from a tape recorder.**

In the NMPC film, "Living Together," puppets were made to "act" the story of a barrio council at work. Ralph Bayer, the producer, is shown getting them ready for a scene depicting a typical council meeting at the schoolhouse, while cameramen focus on the scene.

A major function of the NMPC is that of training personnel of all government agencies to use mass media more effectively. Here is Mr. Hart, the author, presiding in a public administration workshop. At right.

lar information is included in the dialogue.

This information campaign on rice growing is representative of the functions the NMPC performs for the Philippines. The fact that some seventy groups now use NMPC services is evidence of the success of the operation.

The story of the NMPC goes back to the days immediately following the liberation of the Philippines from Japanese occupation. Devastated by war and harried by the communist-led Huks, the Philippines came into independence in 1946. The new nation received from the beginning both moral and material support from the United States, and by 1952 American technicians of the Mutual Security Agency were working with their Filipino counterparts to build a sound economy of free men.

A pressing problem was the dissemi-

nation of information to the 20 million people of the Philippines, information about a higher yield of rice; about eradication of malaria; about better livestock and safe drinking water and feeder roads; about industrialization; above all about the kind of self-help community action by which the people themselves could raise their standard of living.

Many Philippine government units already had information agencies. But the information was simply not getting to the people in effective form.

It was to meet this need for more effective media of information that the National Media Production Center was established in September, 1953. The main functions envisioned for the NMPC were the production and distribution of mass media dealing with the economic development program of the Philippines and upgrading of the information programs of all government agencies.

To date the NMPC has produced sixteen motion pictures on topics ranging from by-products of coconut husks to safe drinking water. Printed materials include scores of pamphlets, posters and "wall newspapers" in English and seven major Philippine dialects—a total of many millions of copies. The NMPC has its own monthly magazine and both daily and weekly radio programs. In addition NMPC produces radio programs for a number of other government agencies. Flip charts are produced, sometimes in large quantities, for various types of presentations. At intervals, a stage show tours the main island of Luzon and excels in crowd-drawing power.

Training of personnel of other offices is a continuous process. Usually such personnel—artists, writers, lay-

out men, photographers—are assigned to the NMPC for extended periods of apprentice training. Similar training has been provided for specialists from other countries of Southeast Asia. In addition the NMPC has organized three training seminars, covering a wide range of communications materials and methods, and drawing as many as 300 participants at one time.

How effective are the media communications which are being produced by and with the help of the NMPC? How good are the pamphlets, the

# IT ISN'T RAINING RAIN TODAY IT'S RAINING NEW FILM TITLES

Too many things seem to be exploding these days; the world's population, the miles that J. F. Dulles racks up, and to get down to cases, the job of the A-V people in trying to choose from the flood of films that descends on them each year.

Any solution for the harassed A-V director and the evaluation committees? We ran across one solution that filled us with despair. A gentleman with a modest film library said he wouldn't talk to us because he could get everything out of one producer's catalogue. Easier, he said. We didn't say anything uncivilized because of our splendid early home environment. But we hope his school system doesn't choose all its texts from one publisher.

Still, the time has passed when you can screen every film released. You have to make a preliminary rejection on some basis (perhaps the number of times you have been dismayed by a producer's films in the past?). And yet despite the inundation we think that you would do yourself an injustice to lose sight of films from the smaller independent producers.

In case you were beginning to think that this isn't an advertisement we should point out that Churchill-Wexler makes five or six classroom films a year, not many, but good ones. (When we get to the point where we're turning out an assembly line product, we're going to start selling brushes . . . more money in it.) For instance we have taken three years to produce ten films correlating with D. C. Heath's Elementary Science texts. One of the latest was chosen as one of the twenty-four U. S. films shown at Edinburgh this past summer. And it was one of the two films chosen to be sent to Venice representing the U. S. in the classroom film category. Isn't that nice? Treasures of the Earth, it's called.

If you would like to preview Treasures, or some of the other Heath films, or some of our other new releases, or if you'd like a copy of our new catalogue, or if you would just like to complain about the exploding world population, drop us a card. (Sorry . . . no brushes yet).

films, the radio programs? How much is the behavior of Filipinos really changed by the impact of these mass media?

It was to find answers to such questions that an evaluation project was recently carried out by the NMPC. Consistent with its dual purposes of production and training, the research project was planned not only to gather information but also to train government personnel for continuous evaluation of their own information programs.

Two kinds of information were sought in this field survey: data on the effectiveness of pamphlets and motion pictures already produced, and general information about literacy, reading habits, radio listening and community channels of communication—facts which would make possible more effective use of mass media in the future.

Six Philippine government agencies agreed to participate, and assigned personnel for the period involved. After two months of orientation and training, survey teams left for selected communities in widely separated parts of the Philippines. Care was used to include a variety of cultures and religious backgrounds. A month was spent in interviewing, after which the teams returned to Manila for the time-consuming job of tabulating, checking, interpreting and publishing findings.

Here are some of the immediate effects of the research on the mass media program of NMPC.

1. The distribution of printed materials has been completely reorganized. Prior to the research, mailing

was done in bulk to key government offices in each province, particularly offices of the governor, mayor and division school superintendent. A major reliance was placed on the local school teacher as a community contact.

These sources have not been abandoned, but the principal emphasis is now placed on the "barrio lieutenant" (an elected official of each small community). The field research presented overwhelming evidence that it is the barrio lieutenant to whom rural people turn for help and advice. Regular mailings are now made to these 19,000 barrio lieutenants.

2. Printed materials now carry more photographs and fewer art drawings. The research showed that rural people "believe" photographs more than drawings, and realistic drawings more than stylized sketches.

3. More dialect translations are being made of printed materials.

4. All government agencies are being urged to plan information campaigns which use a variety of media, and to follow up with their field personnel.

This research simply added evidence to the conviction that has grown at NMPC over its five years of working with mass media, a conviction that information materials without supporting campaigns have little effect on human behavior, that no single medium of communication can by itself significantly change habits and attitudes, that we must plan in terms of campaigns using many media.

Which is, after all, what any good classroom teacher has learned long since.

## THE STORY OF OUR MONEY SYSTEM

(Coronet Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$55. Teacher's guide available.

### Description

Off-scene narration, costumed actors, simulated historical settings, and authentic old coins are combined to present the evolutionary highlights of the present-day money system used in the United States.

"Where did the idea of money come from?" "What is the story of our money system?" These two main questions of the film are introduced by presenting a familiar present-day scene—a person's making a purchase in a super market and receiving change as a result of overpayment.

A swift change in historical period takes the viewer back to primitive times and shows how simple barter was used to transact exchange of goods. A fisherman is pictured attempting to trade a fish net for a basket of dates, but has no success, for the other person has little use for the fish net.

Shifting of the scene to ancient Greece takes the viewer to the next step of the evolutionary ladder in the medium of exchange, illustrating how useful animals became a common basis for payment of goods and services. Even this system had two major problems, however. One was the inconvenience in handling and the second was the indivisibility of the exchange medium. These problems led to the use of bags of salt as a basis of purchase. The use of salt solved the problem of divisibility but not the problem of handling.

Metal was later found to be even more practical than salt because it was useful, highly valued, and more durable. Small nuggets of precious metals such as silver were used. The metal was weighed on scales and merchants soon learned to use marks to guarantee purity.

It was from their Asian neighbors, however, that the ancient Greeks learned to mold metal nuggets into

coins. The standardized value of these coins was determined by their weight and was guaranteed by a stamped mark of authority.

An early Roman scene depicts the use of a coinage system modeled closely after the Greeks. Here the "denarius" became the basis of exchange. This system came into almost universal usage.

When the King Offa Penny became the primary medium of exchange in 8th century England, a system was begun which helped to set a convenient standard for other coined money and to create a permanent money system for Englishmen.

The film illustrates how, many centuries later in America, English colonists at first returned to simple barter in selling goods and services which was followed by the use of tobacco—similar to the Greeks' use of animals and salt—as purchasing power. Following historical precedent, the system of coined money soon evolved. Massachusetts even followed the practice used in England when metal became scarce and began issuing paper promises. In this way, representative money began in the colonies.

Soon the colonies were issuing different types of money, either in paper

or coin currency, and continuing to use money from England, Spain, and Portugal. Trade between the colonies was, therefore, most difficult. In 1792 a unified system based on ten with the unit being the dollar was adopted.

The viewer is brought back to the present and shown inside a United States mint where money is being manufactured. The narration points out that today there is a useful and practical money system and that money is the most convenient means for measuring the value of work done and things purchased.

### Appraisal

The costumed actors and realistic settings used in depicting historical periods add vitality and dramatic quality to this film. The use of antique coins promotes a sense of validity in the film's content. Such treatment should be especially beneficial when used in the recommended grade levels of upper elementary and junior high school. *The Story of Our Money System* adequately treats its early questions of "where did the idea of money come from" and "what is the story of our money system?" It does not, however, delve too deeply into the "why" aspect of the different mediums

and systems of exchange but should motivate further study of the explanation of the "how" of establishing and guaranteeing a money system. One of the film's strongest points then is that of stimulating interest in and helping to develop a basic understanding of this thing which is daily taken for granted—money. Another strength of the film lies in its final scenes inside the mint where present-day money is shown being manufactured. This is a treat even for more mature audiences.

— Charles F. Ritchie

**PUSS IN BOOTS**

(Encyclopaedia Britannica Films, 1150 Wilmette Avenue, Wilmette, Illinois) 16 minutes, 16mm, sound, black and white, 1958. \$75. Teacher's guide available.

**Description**

Animated puppets manipulated in over 15,000 single shots are used to tell Charles Perrault's story, *Puss in Boots*.

This film version of the tale relates the story of the miller's son who uses his inheritance to buy a cat after his father dies. When the boy begins to despair over his poverty, the cat promises that if a pair of boots are made for him, his master need not worry about poverty again. After the boots are finished, the cat hunts for game in the meadow and catches several choice partridges which he takes to the king, who is delighted to receive them. Time and again the cat takes his captured game to the king's kitchen and receives gold in return.

One day the cat overhears something which causes him to run quickly from the king's kitchen. He had discovered that the king and his daughter were going for a drive that afternoon and he instructed his master to bathe in a certain place in the river which the royal carriage would pass. He succeeds in getting his owner to promise to do exactly as he says and tells him, "If anyone asks your name, it is the Marquis of Carabas."

When the royal coach approaches the spot where the young man is bathing, the cat signals it to stop and he implores the king to give him clothing for his master, whose clothing had been stolen while he was in the river. The coachman departs and soon returns with costly raiment and a powdered wig. The miller's son is truly majestic in these wonderful garments. He is invited to ride in the king's carriage and they depart. The cat runs ahead persuading all along the way to tell the king that the fields, woods, and other properties belong to the Marquis of Carabas. Just as the cat

suspects, the king inquires along the route about the beautiful countryside and is visibly impressed when told that it belongs to the Marquis of Carabas.

In the meanwhile, the cat enters a sorcerer's magnificent castle and tricks him into turning himself into a mouse, which the cat quickly eats. The king is overwhelmed when he arrives at the castle and is told that it also belongs to the Marquis of Carabas. When the miller's son asks for the hand of the princess, the king is overjoyed at making such a fine match for his daughter.

The miller's son and the princess live happily ever after—and so does the cat.

**Appraisal**

*Puss in Boots* should provide primary and intermediate grade teachers with a film that will stir the imagination of children and provide an impetus for creative story telling, writing, and drawing. Study of the technique alone will be profitable for those interested in motion picture photography or puppetry. The story in itself is a well-known one, and the animated puppet technique brings it alive. This revitalization of the techniques of story telling may well direct student reading into allied channels. The Diehl brothers, who made this film in Germany, have done a masterful job in simulating movement in the story. One may question the moral tones of the story but not the producers' handling of it.

— O. E. Bismeyer, Jr.

**RUSSIA**

(International Film Foundation, Inc., 1 East 42nd Street, New York 17, New York) 24 minutes, 16mm, sound, color, 1958. \$250. Produced by Julien Bryan. Teacher's guide available.

**Description**

Julien Bryan's *Russia* is the story of a people whose heritage is oppression. Under both the Czars and the Soviets, most Russians have lived a bleak and monotonous existence in the service of a despotic ruling class.

Soviet farmers are given little voice in determining how the fruits of their labors will be used. The bargaining power of industrial workers is limited (there are no labor unions). Women compete with men for even the most strenuous jobs of physical labor. The worker is "rewarded" with one room to house his entire family, the low purchasing power of his wages, and the unavailability of consumer goods.

Many modern Russians have resisted the authority of the state by courageously worshipping God in the traditional churches. The farmers have re-

sisted collectivization by consistent failure to meet government production quotas, in spite of increased machinery and land tillage. The desire of the farmer to work his own land is so strong that in order to stimulate collective production, each family is given one acre of land on which it can raise fruits and vegetables for sale on an open market.

The men who control Russia today have as their object to awe, to frighten, to divide, to conquer. They hope to gain time by strengthening the confidence of their own people while they are dividing the West. They believe that scientific knowledge is a key to world power. Consequently the school curriculum, which is controlled by the Communist Party, stresses scientific subjects. Because so many scientific publications are available in the English language, English is also stressed in schools.

Those who excel are given the opportunity of further scientific study at a university, where they prepare for government research projects. Thus diligent students may attain high social prestige and top income.

In this country, where the aim of education is not citizenship but the production of "efficient units in Soviet society," Mr. Bryan hopes that

the study of science will lead to a concern for freedom. He also has high hopes that the recent programs of cultural exchange with other nations will result in better international understanding.

#### Appraisal

Few film subjects are more complex and more inexhaustible than the subject of this film. Therefore, Mr. Bryan, a noted film-maker and lecturer, has had to draw upon his knowledge of Russia gained through several visits to the country in order to select certain items of information for presentation in this film. The resultant film

presents little of Russia's history, geography, and cultural contributions as such. The main purpose is the understanding of the people of Russia. It is in this area that the film can make a valuable contribution, particularly on the junior high, senior high, and adult levels. Because of the currently increasing interest in Russian affairs, U. S. educators will welcome this and other up-to-date films on Russia that are now being released.

Only once, during the church worship sequence in a Ukrainian village, does the film attain and sustain intimacy with the modern Russians, the kind of intimacy achieved in Mr.

Bryan's Japanese and other films. However, few other American filmmakers have been able to capture such intimacy with Russian subjects, possibly because of the reputed reluctance of the Russians to have foreign visitors in their homes.

Students of Russian history and culture will be delighted with sequences using old footage which contrast the ceremonial activities of Czar Nicholas II with the way the peasants lived along the Volga. The appropriate musical score of the film will also be appreciated. Anyone seeing the film may find either revelation or confirmation. It is more likely that he will find both.

—Ledford Carter

## CREATIVITY

(U. S. Department of Agriculture, Motion Picture Service, Office of Information, Washington 25, D. C.) 11 minutes, 16mm, sound, color, 1958.

### Description

Narration from the Book of Genesis opens the film with pictorial representation of cosmic creation and birth of the earth (using scenes from national parks and several volcanic actions). Life on earth through lower forms to animals, birds, and fish is developed. Man is introduced, including his creative work and imagination. Quotations from various philosophers, such as Confucius and Shakespeare in the fields of science, literature, and art are used in conjunction with statuary from different sections of the world and from different eras of time.

Prismatic color patterns and arrangements are used to focus attention on the narration. A delayed title is used, coming after the first hundred feet of film.

### Appraisal

The title, *Creativity*, indicates the thesis of the film which is that of imaginative "creativity." In this film, color, art objects, and literary narration are combined to catch and hold attention. Emphasis is placed on man's ability to conceive, imagine, and create. The pace is fast, going rapidly from one aspect to another. It is recommended for use in senior high school social studies, art, music, and science classes to stimulate imagination. Adult and college-level groups may find it valuable in posing a field for critical focus of thought. *Creativity* was originally produced as a special workshop film based on the theme of "creativity." It was done on a very low budget and stock footage can be detected by the critical eye, however, this does not materially detract from

the effectiveness of the film.

—R. A. Frye

## MAKING SENSE WITH OUTLINES

(Coronet Films, Coronet Building, Chicago 1, Illinois) 11 minutes, 16mm, sound, color or black and white, 1958. \$100 or \$55. Teacher's guide available.

### Description

This film, not just a revision of Coronet's earlier film *Building an Outline* (1948), although the content is similar, is a completely new production in the language arts area.

To emphasize the practical application of the use of an outline and to motivate an interest in the process, the film shows a fifth-grade class planning a field trip to an apple orchard. The teacher suggests to the students that it would be helpful to them and to the farmer they intend to visit if, before making the trip, they list all of the things they want to know about apples. The class soon discovers they have so many ideas that organizing them into an outline will help to clarify their thinking.

From this point the film progresses rather rapidly through the major steps involved in building an outline. The content covers major topics, minor topics, numbering, lettering, periods, and capital letters. After their outline is completed, the children write a letter to the farmer enclosing the outline so that he will know what they want to learn on their trip to his farm. The film closes with the suggestions that outlines may be used to prepare class reports, both oral and written, and to organize thinking and ideas. Actual filming takes place in a typical classroom situation and later moves with the group to show some of the experiences of the field trip. The last few feet of footage is devoted to an evaluation of the trip as suggested by the preliminary outline and a class report prepared by an individual student.

### Appraisal

The evaluators feel that this film does an excellent job of introducing young students to the purposes and techniques of the outline system. Suggested areas of use are on the upper elementary level to introduce the practical application of outlines and possibly for use on the junior high school level for reviewing the techniques and purposes of outlines. The content is easily understood, since it follows a logical pattern of thought. Nothing occurs in the visuals which in any way detracts from the narration. Color, though not essential to the development of the main ideas, is especially satisfying.

—Elizabeth Weiser

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. **\$7.50.**

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. **\$7.50.**

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. **\$7.50.**

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. **\$7.50**

# Useful Filmstrips

By **IRENE F. CYPHER**

Associate Professor of Education  
Dept. of Communication Arts  
New York University

We have long advocated reliance upon the filmstrip as a very important and versatile medium to use in educational and group work of all types. Nothing has caused us to change our mind. Indeed, we would encourage any teacher or group leader who may be seeking a way to incorporate visualized experiences into his work to use a filmstrip as a core around which to build study, discussion, and experimentation. There is nothing we deplore more than a "showing" of filmstrips; but an ounce of creative thinking, plus some common sense thoughtfulness put into the "use" of filmstrips, can bring really excellent results. The following filmstrips are among recent productions which impressed us as ones with value for such use.

**AT THE CARNIVAL and  
RHYTHM IN NATURE**

(Color strips; Stratco Audiovisuals, Ltd., P. O. Box 1883, Grand Central Station, New York 17, N. Y.; \$3.25 each).

Every so often there is material which uses a slightly different treatment to present familiar subjects. In this instance a new producer makes such an initial presentation with two filmstrips which are truly delightful and a pleasure to recommend. Teachers who are seeking filmstrips with a potential for creative projects, pictures to arouse participation in discussion and story telling will find them a welcome addition to their list. In each instance there is picture content only and no captions. "Rhythm in Nature" gives us seventeen frames, each one of which illustrates or suggests a possible source of rhythm or design in nature in which motion is clearly discernible. "At the Carnival," in twenty-two frames, provides a sequence of pictures highlighting all the things that delight and capture the heart of a child at a carnival. In each instance there is a record (of similar name) which can be played in conjunction with the filmstrip and there are many possibilities for use in language arts, speech and oral expression and rhythmic. There is flexibility in these materials, which can be adapted to meet

the needs of different children, different units of work, and different grade levels. In fact, we prefer not to suggest one specific grade for them but suggest rather that they be considered useful in many different grades.

**CONQUEST OF SPACE SERIES —  
"EARTH SATELLITE" and "IGY"**

(Color strips; Basic Skill Films; 1355 Inverness Drive, Pasadena 3, Calif., \$6.50 each).

Students in both science and social studies today have need to understand and appreciate physical phenomena such as the earth satellite, the law of centrifugal force, gravity, and their relation to weather and radio communications. Current observance of the International Geophysical Year has of course highlighted scientific research being done to measure air and space above the earth, the earth itself, oceans, and the inner parts of the earth. These filmstrips give, in drawings and diagrams, pertinent information about the areas indicated. Each strip is divided into sections for better use in presenting the projected story, and each has as part of the strip a teacher's guide section, word study list, and review questions. These are strips to be used as study and discussion progress, and not for mere passive viewing. They will probably prove most successful in the upper elementary and high school.

**CORRELATED SCIENCE SERIES —  
ELEMENTARY CHEMISTRY GROUP**

(3 strips, color; Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill.; \$16.30 set with guides, \$6.00 single strip.)

The changing emphasis on science material in the elementary curriculum makes this set of filmstrips very timely. The general purpose is to provide help in learning to know basic characteristics of the common elements and the symbols used to designate them; to explain how chemistry and chemical changes affect our everyday lives, and to assist in gaining some concept of what chemistry contributes to modern

civilization. There are three strips, *Atoms and Molecules*, *Chemical Changes*, *What Things Are Made Of*, and there is a teacher's guide with each. The strips are intended specifically for pupils in grades six through eight. The teacher who is an expert in science will approve of these strips, and they will also be helpful to the teacher who is refreshing his science background and needs materials with practical accurate information.

### SIMPLE MACHINES HELP US WORK

(Color, six strips; Jam Handy Organization, 2821 East Grand Blvd., Detroit, Mich.; \$28.50 set; \$4.95 single strip.)

Children in the primary grades have a keen interest in facts about "Why things work." In this series we are given illustrations of the hows and whys of levers, wheels and axles, pulleys, ramps, wedges and screws. All of these simple machines are part of the pupil's everyday life, and he will need to be familiar with their use. The filmstrips offer simple experiments that should prove invaluable in preparing pupils to work with these machines, and to understand their functions. Filmstrips of this type are useful both as preparation for experiments and projects, and as an aid to reviewing work done and knowledge and information gained in the doing. Pictures and explanations are well selected in terms of primary grade age interest.

### THE STORY OF D-DAY

(Color; single strip; Enrichment Teaching Materials, 246 Fifth Ave., New York 1, N. Y.; available as single filmstrip; also with correlated book and record; for price combinations write producer.)

Frame 4 of this filmstrip tells us that, "History stood at the crossroads on D-Day, June 6, 1944." Then the strip goes on to give us a graphic presentation of the major events connected with the leading up to the day when Gen. Eisenhower was directed to undertake operations aimed at destruction of the German armed forces. The filmstrip is a self-contained unit and can be used as it stands. As with other materials offered by this producer, however, there is also available a record dramatizing this historic episode and a Random House Landmark book for those who would read in greater detail. Coordinated units such as these provide a teacher with instructional materials of different types. This filmstrip is well suited to the middle and upper grade interests and units of work.

# SHOW WHAT YOU MEAN

... in brilliant detail  
with the AO SPENCER OPAQUE PROJECTOR

#### SHARPEST IMAGE

Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

#### 1,000 WATT INTENSITY

High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up.

#### SO EASY

Teaching and learning are much easier with this unique projector.

You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them.

#### STURDY, PORTABLE

The projector is built of rugged, lightweight, lifetime aluminum. Carry it anywhere.

# SOUND advice

about audio materials and equipment

by **MAX U. BILDERSEE**

We were curious, recently, to discover the depth of recordings potentially suitable for instructional use. We carefully canvassed the catalogs of several publishers and came up with some truly astounding information. In the field of English and Literature alone there are more than six hundred recordings of potential value. We could judge only by titles and the known reputations of publishers and we were deliberately selective rather than inclusive in editorial policy. The outcome surprised us considerably. For instance, we found no fewer than eleven "Hamlets" — some complete and some excerpts — some on tape and some on disc. Who reads the title role? John Barrymore, for one, as well as John Gielgud, Maurice Evans, and several other famous and lesser known actors.

One "Hamlet," which we haven't yet heard but which excites us in concept, is produced by Word Records and is the Baylor Theatre production of the play. No less than three different men play the lead role to depict the honest, human side of the Dane, his manners as a courtier, and finally his actions and voice as a matricidal individual. We can only guess, but perhaps this production will open up new

vistas for the presentation of drama via recordings. We have always assumed that one individual should play the lead role — and that each role should have its own reader. But is this necessarily the case? Cannot it be that several performers are needed truly to delineate a particular character, and that this particular production will sound the way to new production techniques which will change our ideas about audio presentation of drama. We have the recordings at hand, and we will report on this "Hamlet" in November.

## Many Poetry Recordings

Poetry, naturally, dominates the field of recordings in English. Not all great poets are represented — nor are all forgotten. There is a variety of fine American and British poets, both modern and of earlier generations whose work has been recorded. Some of this we have already reported. Keats, Shelley, the Brownings, Walt Whitman, Longfellow, Frost, Yeats and Sandburg are all represented — and may be said to dominate the selections. What a golden opportunity for the alert teacher exists, to use several recordings of one poem to excite reactions in terms of comparison and contrast.

In addition to the poetry and drama there are readings of novels, short stories, selected portions of a variety of works, essays and biographical sketches. The latter are usually quite informal and are largely based on interview or discussion by the subject himself. Only through the recording can this material be brought, at the teacher's will, to the attention of either the class or the individual. The teacher unaware of this material can be said to need guidance into this fertile area.

We were intrigued by the title of a comparatively recent tape recording, "How's Your Hearing?" (Mooney-Rowan Publications, Severna Park, Maryland). This "tapebook number 2" is available only on tape at 7.5 inches per second in a dual track recording.

**Bernstein on Beethoven**

The content is interesting, being thirty minutes of selected music including "Grandfather's Clock," "I'll Take You Home Again Kathleen," "Song of India," "Meet Me in St. Louis," "Bird in a Gilded Cage," "Humoresque," and "Aloha Oe" among others. These are intended for recognition purposes in a hearing test.

The entire recording is designed to screen hearing difficulties and to discover significant losses which require medical or clinical attention. The effort is applauded although we believe that the school uses may be limited. Actually, the recording, and the presentation in the accompanying booklet, suggest that this be done in a social surrounding rather than a school situation. The first instruction is to "gather together around your player six to ten friends." This sets the tone for the test.

In addition to the music approximately fifteen minutes is devoted to frequency discrimination testing in which the participants are directed to determine which pure frequencies are higher (or lower) in contrast with another. Thus, in 33 pairs, the listener is asked to demonstrate discrimination in the range from 480 to 6,500 cycles per second. The differentiations offered are as fine as 30 cycles (530 vs 560 cps) and as gross as 3,000 cycles (1,000 vs 4,000 cps). Another section is devoted to testing both vowel and consonant differences in word pairs. In this section "rye" and "lie" are contrasted for aural comprehension as two similar sounding consonants.

The conclusion reached is that the individual who cannot recognize well-known melodies, the difference between higher and lower sounds, and the differences in consonants is in need of immediate attention. And to this we agree.

But the classroom applications are limited. To begin with, without instruction this will require an hour to complete as a simple screening test. The use of the recording for this purpose presumes a tape player in perfect condition (a situation which does not always exist), an acoustic situation which can be fully controlled—even to the distracting outside sounds, no variations in general listening conditions and equi-distant separation for all participants from the sound source. Not impossible, but unlikely. Finally, no amateur in this area of graduate study should take it upon himself to judge the results! Hearing testing is a matter of professional competence and should be left to those specifically trained in this area.

Students with either glaring or even suspected difficulties should be referred to specialists for examination.

A delightful recording, suitable for Music Appreciation classes at all levels from the Junior High School up is Columbia's CL 918. This is titled "Symphony Number 5 in C Minor, Opus 67" by Ludwig von Beethoven, but don't be misled. One side is devoted to an exceptional discourse by Leonard Bernstein in the construction of the Symphony from every standpoint. Mr. Bernstein has gone deep into the mind of the composer in an effort to help the listener discover why certain passages sound as they do. He has used discarded manuscripts and introduces them in appropriate places in the performance to show how and why these were discarded or revised by Beethoven into the symphony as it is known today. As a teacher Mr. Bernstein is exceptional and his demonstrations and explanations are deft. He draws an interesting and challenging parallel between writing a symphony and creating a literary work of art—and in this regard this recording can be effectively used in English classes. But it must first be considered in terms of music appreciation and instruction, for which it is alone in its field, and superior to anything we have heard for this broad field. The reverse of the recording is worthy of note, too, being a performance of the Symphony by the Philharmonic Symphony Orchestra of New York under the leadership of Bruno Walter. And this is a "treat to the ear" by itself.

Enrichment Records (New York) has released several of the titles mentioned here last month. Among them are "Patrick Henry's Famous Speech" and "The Bill of Rights" which back each other on one twelve-inch recording. The size is reported here because it represents a change in policy for Enrichment, and the recording profits, qualitywise, thereby. The Patrick Henry recording is essentially a portrayal of the mood of the American colonists, as shown through the songs then popular. There is a very good selection of material and the delivery is professional and thoroughly competent. The Bill of Rights is a long and detailed document and editors have successfully presented the highlights thereof, with appropriate explanations, without depriving the document of a bit of vitality or significance. The latter side summarizes the causes of the American Revolution and of the general dissatisfaction with the Articles of Confederation. Both of these sides are intended for junior high school classes, and can be profitably employed in instruction at this level. They are accordingly recommended.

# Church department

by WILLIAM S. HOCKMAN

## The Filmstrip's Future

### I

As the 2 inch by 2 inch slideset displaced the lantern slide, so the filmstrip supplanted slides. As we look back, we can see clearly what happened: the slideset could do the job when the demand was small and the churches willing to pay a small rental charge. When the demand grew and the churches wanted to purchase and own materials, the slideset was too costly and difficult to duplicate and a new medium came along and displaced it.

The filmstrip took over the job of providing the church with projected still picture material because it could be duplicated easily, cost less, was somewhat easier to use, and had a fixed order of pictures. At first the "teaching" captions were right on the frames. When left off, they were supplied at little cost on mimeographed form. As many will remember, this newer medium took over very fast and the slideset receded into insignificance.

The handwriting for all this was on the wall at the time of the first and second International A-V Workshops, at North Park College in Chicago in 1944 and at Lake Geneva in 1945. Few saw it; no one made anything of it. However, by the time of the fourth and the fifth Workshops, the filmstrip was a newcomer in the church field and attracting considerable attention.

It was at this time, not at the fifteenth Workshop, that the leaders of the church A-V movement should have asked if the filmstrip had the inherent characteristics and educational potentials required of the medium which seemed destined for extensive use in the church. This question of media potential in relation to the categorical objectives of the churches' program got scant attention at that time. I raised it in my book (*Projected Visual Aids in the Church*, Pilgrim Press, but so far as I know the basic research needed for an answer still remains to be done.

### II

Today we in the church field are confronted with three basic questions

relating to the future of the medium of the filmstrip: a) is it becoming too expensive? b) can anything be done to improve the physical characteristics of the sound filmstrip and make it easier to use? and, c) can it meet the need of the church for a fool-proof, inexpensive, visual or audiovisual medium for use at the level of the classroom, by small groups, and by the tens of thousands of small churches across the country? Let us look at each question briefly.

When the slideset had only incidental relationship to the program of my church, renting it from a distant depository was satisfactory. As the demand for useful visual material grew in my church, our interest shifted from renting to ownership. It was at this point that the slideset was first found wanting—the cost of a good set was more than we wanted to pay. It was the old problem of mass production. To meet this need, a new medium was brought forward.

We have a somewhat parallel situation today with the sound filmstrip. We now need a medium which can put still picture material into the classrooms, of which there are many in every church, rather than just into the departmental rooms. In relation to this need, the sound filmstrip as it is now developed looks to many churches and educational leaders like a pretty expensive medium.

Take my own church as an illustration. Five years ago filmstrip utilization was limited to the departmental level. This meant that two or three filmstrip utilization units were enough for the church. Within this period of five years utilization has dropped down to the classroom level. Four filmstrip units will no longer do. We need more. As utilization drops from five or six departments to fifteen or twenty classes, we face the economics of this medium. The trend in my church is the trend across the nation.

To make this situation more acute, the proper utilization of the sound filmstrip requires the use of record playback equipment. We are up against a trend here. Within years upward of 90% of all filmstrip material

has and is now coming out with recorded sound.

To recap: if a sound filmstrip has become itself a \$10 package, and if its proper utilization requires a \$50 to \$100 projector plus a \$30 to \$50 record player plus a \$20 to \$40 projection screen, to say nothing of the \$14.95 table filmstrip previewer, how can this medium qualify as the one to bring the projected still picture into the classrooms of the larger churches, and also into the tens of thousands of smaller churches? In all honesty, and with as much objectivity as we can summon, this question of cost must be faced when we consider the filmstrip's future.

### III

When we turn to the filmstrip's inherent physical characteristics, we are confronted with factors that are already operating to limit the popularity of this medium. So far as I am aware, the filmstrip was never engineered, never designed. It was discovered; found—come across by the makers of the slides which made obsolete the expensive and hard-to-duplicate lantern slides.

This may account for some of its physical peculiarities: hard to roll up because of the springiness or temper of the material; hard to remove and return to its container; easy to get into the projector wrong end to; easy to get into the projector wrong side to; hard to make out the title with the un-aided eye; difficult to preview and study without special equipment; easy to finger-smudge; and, needing to be framed with every insertion into the projector. Quite a list!

While every one of the "troubles" can be overcome to a satisfactory degree by careful training and long practice of the user, these very faults of the medium are nominated time and time again by leaders as tending to limit its mass use in the church. These faults are real, and must be faced as the future of the filmstrip is weighed.

Notice, also, that the user (at every level in the church) must not only master a medium with these general faults, but must at the same time master the operation of a second piece

of equipment — the record player for the filmstrip's commentary. He must develop finesse in operating both at the same time—a chore and test of skill even for old-timers like myself.

And, let us remind ourselves, one slip in bringing off the use of a sound filmstrip in a department, group, or classroom, can flub the whole performance so the educational potential leaks out of the situation like water out of a berry-basket.

What can be done about this? At least three things, as we see it. Produce fewer sound filmstrips, improve the physical qualities of the filmstrip, and develop inexpensive projection-playback equipment within financial reach of the church.

It is superficial, it seems, to assume that if a given piece of subject matter is cast into the filmstrip medium that it will be better still if made into a sound filmstrip. We need a keener and more objective appraisal of material (content) in terms of what media and what format within a medium. This is the first step, and a necessary one. We doubt if the church really wants all its still projected material in the sound filmstrip medium.

Secondly, the filmstrip *can* be improved. Some of the (ill) temper can be taken out of the thing. It's too springy for easy handling. The front end can be marked — with a frame-size green arrow, perhaps. The tail end can be marked — with a large red arrow. The title can be put on legibly, using several clear frames. The right side of the thing can be indicated somehow. (Manufacturers may need to cooperate on this one.) Certainly, it can be printed and cut with relation to sprocket holes so that when fed into a *standardized* channel it will always be in frame. (This, too, will need the cooperation of the manufacturers.)

With millions invested in the medium of the sound filmstrip by the industry, it would seem reasonable to assume that producers, laboratories, distributors, and users would be more than willing to conference together for the purpose of making this medium more acceptable to the masses who should use it. Unless this step is taken, how do we know but the future will find the sound filmstrip wanting just like a few swift years took the measure of the once-promising slideset?

While we have no desire to see the filmstrip projectors now owned by the churches made obsolete, we do believe that a carefully designed, integrated, one-unit projector-player which is easy to operate and easy to buy, is definitely indicated if the medium of the filmstrip is to have a secure future in the church field. Already produced for industry, and business, are such

# SYLVANIA CERAMIC BLUE TOP

PROJECTION LAMPS... for all makes... all types... in all sizes

Use a Sylvania Ceramic Blue Top in your projector... your slides and movies deserve the best!

New Sylvania Ceramic Blue Tops are available in all standard sizes for any projector... to fill your exact requirements for clear, brilliant projection.

**Blue Tops offer these superior qualities:**

**Brighter**... Ceramic Blue Tops won't scratch, chip or peel like ordinary painted tops... machine-made filaments assure pictures bright as life.

**Cooler**... Ceramic Blue Top is bonded to the glass for improved heat dissipation... cooler operation assures longer lamp life.

**Longer Lasting**... Exclusive Sylvania shock-absorber construction protects filaments from vibration damage.

1740 Broadway, New York 19, N. Y.

## SYLVANIA

... fastest growing name in sight!

LIGHTING • RADIO • ELECTRONICS • TELEVISION • ATOMIC ENERGY

projectors. Nothing but bold and creative engineering stands in the way of creating a satisfactory one for the churches' classrooms. It is altogether possible that this "new" integrated projector would use the principle of rear projection, enabling the teacher to face his class.

The sound filmstrip can be improved along these three lines. If it is done it will have one future; if it is not done, it will have another future. Now is the time for action, although ten years ago would have been better.

#### IV

Interest in a new projected still picture medium, no larger than a man's hand, was in evidence at the California Workshop in 1956. By Green Lake in 1957 it was a sizeable cloud formation there in the horizon for all to see who would. Some did see it, talked about what it meant, and tried to relate it to the filmstrip's future. At the first consultation this summer at Penn State this interest in a medium for the classrooms of the church was much in evidence, and carried over into the fifteenth Workshop.

For many of us, three factors are important in any consideration of improved or new media for projected still pictures: a) holding to the 35mm size; b) continuing the usefulness of the large resource of present filmstrip materials; c) keeping in operation, even with adaptive devices, the projectors now owned by the churches. Others in the movement will think the time has come for radical change, for the creation of a new medium for the projected still picture. To the most far-seeing and objective among us, both positions will have considerable merit.

#### Conclusion

Within a decade the verdict will be in. Projected still pictures are destined, we believe, to carry the burden of visualizing certain parts of the church school curriculum. They will share this job with the sound motion picture — short, and power-packed as few now are. Along with this will come a new understanding of the power of the audio medium, and to it will be assigned a significant role in the teaching work of the church.

While over the long-years advancing technology will bring us audio and visual (and audiovisual) media with power and characteristics now little dream of, the sound filmstrip can have a long and useful life-time in the church if all those concerned with its production, distribution, and utilization will face present realities and do something bold and intelligent about them.

— WSH

### Accenting the Positive

At last we have a mental health film that shows *health* and happiness and not just problems and perplexities. Thus, another title for *The Bright Side* could easily and accurately be "The Blessedness of Parenthood." Here is a 25-minute B&W film which documents the kind of un-common sense that Dr. Benjamin Spock has been talking about; a film which shows parents playing their roles with wit and devotion and getting a lot of deep joy out of it. They seem aware of the conviction that the family drama provides growth for the parents as well as the children. Highly recommended for use with parents, teachers, ministers, professors, older

youth, and all who want to accent the positive aspects of mental health in the family group.

*Bitter Welcome* spells out what it means for a former mental patient to win his way back into useful and suitable employment, to gain and hold a place among men. This well-photographed 36-minute film dramatizes his courage, his anxieties, the fear and suspicion of fellow workers; and, his successful battle to keep his home, his job, and his confidence in himself. Here is a film for the general public — which needs to learn that patients can be cured; can work again. It is a film for the professionals of the community — ministers, social workers, doctors, nurses, employment officers, and community leaders — since it is they who determine the general social climate to a significant degree. Recommended. (Both films from The Mental Health Film Board, 267 W. 25th Street, New York 1, N.Y.).

I liked Julien Bryan's 24-minute documentary film, *Russia*. The producer has been a perceptive viewer of the human scene for some years now; this film has excellent content and technical qualities. Beginning with some priceless silent footage of the 1905-10 vintage — showing court ceremonies of the Czar and living conditions of workmen and peasants of that era — it moves across the contemporary Russian scene, showing us just the things we want to see. Highly recommended to older youth and adults in church, college, university and community. (From International Film Foundation, 1 East 42nd Street, New York 17; rental \$10)

In the 16mm sound film *The Christmas Deer*, a fine old legend is retold for children and adults. Timeless and universal in appeal, this beautiful 14-minute film was produced by the Grover-Jennings Productions (4516 N. Hermitage, Chicago 40, Ill.) for use in church and school, and has good qualities throughout. Some care ought to be taken when presented to children to orient them on the story line, which is just a bit complicated. The photography of Lutz Hapke of the deer are exceptionally fine. Recommended.

*Retire to Life*, and *Adventure In Maturity*, are companion films on the "senior citizen" theme. The first shows us a man doing "retirement" the wrong way, and finding out before too late how to go at it the right way. The latter film is the distaff version of this theme, showing how an "old" lady got the right perspective on old age and wasn't so old any longer. Recommended for adult groups in church and community seeking to understand the mental and vocational aspects of "retirement." Useful films in helping wake up boards and agencies having to do with assistance to the aging citizen. (From International Film Bureau, Inc., 57 East Jackson Blvd., Chicago 4, Ill.)

The finest film I have seen on its subject is *How Much Affection* — between young lovers. It is honest, candid, frank, penetrating, constructive, balanced and very useful both with young people and with parents. It can be used with young people alone — for what it says, and for the thinking and discussion it will engender. It can be used with parents — for what it says to them both directly and by inference. It can be used with parents and young people to create a background for fruitful discussion of boy-girl and parent-child relationships. Highly recommended. (From McGraw-Hill, 330 W. 42nd St., New York 36, N. Y.)

Pinched this month for space, there will be "notes" only on some new filmstrips seen during the summer. Longer reviews later, perhaps.

*Conduct on a Date*, from the older teens series of Family Filmstrips, is 49 frames of good art plus a pretty fulsome recorded narration followed by "discussion bands." Good and useful, it would have been better had it stuck more closely to its subject, conduct on a date. It wobbles into other (related) subjects and is weakened a bit, but remains a helpful presentation for the high school age level.

*Rudi Comes to Canada* tells of the arrival of a refugee boy and how he was assimilated in school, church and community. It can be used to show how it is done, and to ask Junior boys and girls how well they would do such a job — indeed, if they are being friendly and helpful to all kinds of new-arrivals in their community. Pleasing and effective art; interesting commentary with Rudi telling his own story. Printed script; utilization notes; from Friendship Press (257 Fourth Ave., New York 10, N.Y.)

In *God The Creator* one family explored how the world came to be by learning the answer given by a Japanese myth and the answer given by the Bible story of creation. The art work is good. The two scripts nicely put together. A useful filmstrip, with suggestions on use with the various age levels in the church school. Recommended. (Christian Education Press, 1505 Race St., Philadelphia 2, Pa.)

# Breaking the Filmstrip Barrier

by Joseph Milliman

Supervisor, A-V Instruction  
New York City

Making filmstrips today is within the ability of every teacher and student who can take pictures with a camera.

The manufacturers of filmstrip projectors have brought this about through the development of interchangeable single and double frame masking device. Many projectors have this single-double frame device, but the one with which I am most familiar is the Viewlex combination filmstrip and slide projectors. In this machine the pressure plates are masked for a double frame picture. In order to accommodate a single frame filmstrip a special metal mask has been included. By a simple process of removing this single frame metal mask a standard or double frame filmstrip can be used with the larger aperture remaining.

A 35mm camera makes a double frame picture. The familiar 2x2 slide is really "double frame" in size. The ordinary filmstrip has frames that are approximately half this size. Filmstrip pictures normally are single frame. In order to clarify this, take a 2x2 slide and compare the picture area with one of the frames in a filmstrip.

Let us assume that Class 5-2 is taking a field trip to a local place of interest, in connection with a social studies unit being developed. The teacher or one of the parents accompanying the class brings a 35mm camera—one that he owns, or one supplied by the Audio-Visual Coordinator. While on this field trip, the complete trip is recorded. Sometimes arrangements can be made to have additional cameras so that pupils and others may also take pictures.

When the films are developed and the color slides are available for inspection, the best ones are chosen. The sequence of the trip is kept in mind and the slides are numbered according to the story being told. These slides are then returned for final processing. *At this time a request should be made so that the pictures are left on a strip in the order that you placed them.* When processed you will have a filmstrip.

There are many special uses for this type of filmstrip, made on a local production basis:

1. Unit development. — Filmstrips made of previous field trips can be used to launch a unit, develop interest, give specific information for research, improve the method of sharing

and pooling information, and introduce a new dimension to culminating activities.

2. School programs and parents. — Filmstrips can be developed in advance of open school week, P.T.A. meetings, class conferences and even for individual parent orientation to the school.

3. Teacher training. — Administrators can develop from a series of charts, graphs or other material, specific

teacher training material that can be viewed by the teacher at conferences and special meetings.

4. Curriculum development. — Supervisors of special curriculum areas now can develop a much needed filmstrip series on their specialized area. These filmstrips can be created and supported by a recorded tape that could set the pattern for instruction.

5. Specialized needs. — Non-English speaking and mentally retarded areas where the immediate needs of instruction can be met through simple filmstrip stories that can be created by the teacher and the class together.

## INDUSTRIAL film & AUDIO-VISUAL EXHIBITION

The 2<sup>nd</sup> Annual

Under the Auspices of the

### NATIONAL VISUAL PRESENTATION ASSOCIATION

An Exhibition of current audio-visual equipment, techniques and services in industry and education for conducting training and sales meetings, visual presentations, advertising promotions, etc. . . . ## NEW EQUIPMENT

### CAMERAS, Movie, TV

**Bolex Single-Lens 16mm Camera.** Substantially similar to turret model; 7-speed, forward and back winding for trick effects, rapid automatic threader, parallax-correcting new "Preview Finder." Model H-16M, with Lytar 1" f/1/8 lens, \$200. BOLEX.  
For more information circle 101 on coupon

**Electric Eye-matic 8mm Cameras,** set exposure automatically, no batteries, red-green warning in viewfinder when light is insufficient. 3-lens turret Model 46 \$139.50; single lens (13mm f/1/8) \$89.50. WOLLENSAK.  
For more information circle 102 on coupon

### CAMERA ACCESSORIES

**All-aluminum tripod,** for industrial and TV use; 3-directional pan head; camera adapter quick-mount shoe; double lock knobs, non-skid rubber feet reversible to spikes, wt 9½ lb., 5'0 high when open, 41" closed. New Model ITV. SAFE-LOCK.  
For more information circle 103 on coupon

**Auxiliary lens attachments** provide telephoto and wide-angle for single-lens 8mm cameras. ELGEET.  
For more information circle 104 on coupon

**"Composor" Viewing Frame,** etched transparent plastic employs Leonardo da Vinci's classic "Golden Rule of Composition." Choice, clear for color, blue tint for monochrome; ea \$3. FEDOR.  
For more information circle 105 on coupon

**Exposure Guides,** wallet-sized, 4-page, one for each of five Ansco films. Sample free for stamped, self-addressed envelope. ANSCO. Customer Service Dept., Binghamton, N. Y.  
For more information circle 106 on coupon

**Macro Closeups Without Extension Tubes.** New 40mm f/2.8 Kilfitt Makro Kilar A covers field only 7/8" wide for Arriflex 16mm. Wt. 6 oz. \$195. KLING.  
For more information circle 107 on coupon

### PROJECTORS, Movie, TV

**Specialist Filmosound Model 398A** is designed especially for audio-visual instruction in schools, churches, industry. Single-case; oval speaker, front-positioned, is always directed at the audience. Reverse and still clutch eliminated. Line cord permanently at-

tached; single rotary dial switch controls both lamp and motor. \$459.95. Optional: **Filmovara** variable focus lens (1¾" to 2¼"), loop setter and hour meter. BELL & HOWELL.

**Bell and Howell Filmosound 398A**  
For more information circle 108 on coupon

### PROJECTION ACCESSORIES

**Motorized Film Viewer** for editing and pre-viewing 16mm films has 75-watt lamp, f/2.8 projection lens, condenser and 4-sized rotating prism. Brilliant 3¼ x 4¼ image. Operates automatically at sound speed, or on one-frame-at-a-time, or manually. Weight 12 lb. in carrying case. VICTOR ANIMATOGRAPH.  
For more information circle 109 on coupon

**Self-contained rear-projection** in normally lighted classroom or exhibition hall. Cabinet, portable, 19" x 15" x 20½". STROBELVISION.  
For more information circle 110 on coupon

**Universal Slide Changer** takes cardboard, glass and metal mounted slides, fits the Kodak 300 and 500 projectors and is readily adaptable to the Signet Model 2. Molded trays hold 36 slides in any combination of mounts. Built-in shutter in the changer darkens screen momentarily between slides. \$11.95 with one tray; extra trays \$5.50 for 6. KODAK.

**Kodak Universal Slide Changer**  
For more information circle 111 on coupon

### SOUND, Equipment & Accessories

**Battery-powered P.A. System,** 200 watt, operates from 28-volt rechargeable nickel cadmium battery; output power switch range 25 to 200 watts, adaptability for additional 200 watts. Wt 45 lb. BOGEN.

For more information circle 112 on coupon

**Classroom TV Receiver** for either closed-circuit or broadcast reception or both. 24" tube; top is 70" above floor level; triple speakers below in 8 cu. ft. speaker case deliver sound right, left, center; mounted on 5" ball-bearing casters; tamperproof controls at front; receiver and speaker units separable, with carrying handles. TRANSVISION.

For more information circle 113 on coupon

**Hi-Fi Components.** 36-watt amplifier Model 209; readily convertible to stereo; acoustic level control to match cartridge and speaker to room conditions; tape and play-back pre-amp inputs; record equalizer; \$139.95. **Pre-amplifier Model 130** for stereo and monaural records, tapes, programs; equipped for 3-channel output. \$169.95. SCOTT.

For more information circle 114 on coupon

**Hi-Fi Stereo Tape Recorder** model T-1120; dual-speed; in-line head; 360-degree sound distribution with 2 self-contained speakers; PA system; 50 db isolation between stereo channels. \$199.50. REVERE.

For more information circle 115 on coupon

**Phone-page system,** loudspeakers serve as answering microphone, for up to 20 phone stations, answer received privately by the original caller. BOGEN.

For more information circle 116 on coupon

**Telectro Model 1970** Two-speed tape recorder; 5-watt; \$99.50 incl. crystal microphone. TELECTROSONIC.  
For more information circle 117 on coupon

**Transcription player - phonograph.** 4-speed, continuously variable 16-84 rpm; 12-watt AC; 12" speaker; optional plug-in cartridge stereo or monaural; plays up to 16" records; 22 lb.; "Director" Model 12V-9. CALIFONE.

For more information circle 118 on coupon

### MISCELLANEOUS

**Chalk-Magnetic Easel.** Steel sheet, painted green, permits combination of chalk-talk and magnet-held prepared materials. Also "Texoprint" papers, treated for chalk use. WHITNEY.  
For more information circle 119 on coupon

**CHART-PAK tape,** transparent, can be had in four colors, four widths plus two "curve line," 90 cents to \$1.40 per roll. Solid color tape now comes as narrow as 1/64th inch, in all 14 standard colors. Also a new chrome-and-gold weather resistant tape, in eight widths.  
For more information circle 120 on coupon

**Cine-Tack AV Screen.** Tackboard on one side, cork over sponge rubber back; screen on reverse side is matte-finished, highly reflective metal. Pivot hinge can be locked. Tackboard choice of colors—green, brown, gray. Four, five, and six square feet. TECLER. For more information circle 121 on coupon

**Easel Accessories** newly added to the "Optivox" include a dual lighting fixture giving a choice of 20-watt or special black-light illumination; also extension arms to triple the easel width; a flannel fixture for flannel-board presentations; a quick-change paper pad holder and a chart fixture assembly. There have been some price changes in the line. ADVANCE. For more information circle 122 on coupon

**Eastern "Star" Blinds** in 26 colors, hang vertically or horizontally, S-shaped slats assure complete blackout, DuPont "Ludox" coating reportedly eliminates washing. Introduced at recent NAVA show. Also "Roll-Head" standard Venetian blinds. EASTERN. For more information circle 123 on coupon

**Glass-beaded Screen 40x40"** in compact metal housing, rubber-tipped to avoid damage to furniture. \$12.95. KO-DAK. For more information circle 124 on coupon

**Front-surface Mirrors** for truly sharp rear-projection set-ups. Opaque and transparent mirrors, available in many thicknesses, shapes, sizes. Transparent mirrors allow vision from darker to lighter area, degree of transparency can be closely controlled. SEMON RACHE. For more information circle 125 on coupon

**Gyroscopic Demonstration Kit**, including classroom gyroscope, manual, precision weights, viscous damper assembly, two calibrated spring restraint assemblies, multi-purpose calibrated proportion scale and pointer, manual turntable, mounting hardware. \$235. MITAC. For more information circle 126 on coupon

**Mobile Film Developing Machine.** Originally CBS. Engineered for television news film processing, develops negative or positive at speeds up to 3,000 feet per hour, built-in chemical mixers, can be operated in any room having hot and cold water. 29"x36"x20". MPENT. \$3,980. For more information circle 127 on coupon

**"Optiglow" and "Uniglow"** new lenticular screens meet two different room situations, the former replaces the Radiant "Du-All" (nonrolling) classroom screen for use in normally lighted rooms; the latter gives maximum brightness and viewing angle in darkened rooms. Both are washable, flame and fungus proof. "Educator" Optiglow 40x40 and 50x50; Uniglow from 37x50 through 70x70; **Vyna-Flect** (glass beaded) now through 70x70 seamless. RADIANT. For more information circle 128 on coupon

**Plastic Lettering** in numerous color sizes and type faces; transparent; for making overlays, titling pictures, films, etc. \$4.95 per sheet; lettering kit 95c. PLANOSCOPE. For more information circle 129 on coupon

**Posture Chair** for film inspectors using the Foster Rewind. Adjusts to dual-control foot-pedal (power on both

spindles); height 23½ to 28." \$33.20. IFB.

For more information circle 130 on coupon

**Red-I-Vue Flannel Board**, aluminum framed, peg-board-perforated back panel; 2" rim spacing makes for easy alignment. Three by four feet, 2-section, \$70.50; other models \$17.50 to \$104.50. Flipchart attachment \$10; title card holders \$4.50; fibre carrying case \$25; zipper-type plastic \$20; **Fibretrix** sheets, 13"x10", \$3.80 doz. **Fibregrit** card stock in 7 colors, per 22x28" sheet \$1.50. WHITNEY. For more information circle 131 on coupon

**Saranspun** is the mill name for a new, inherently and permanently flame-proof drapery material, non-toxic, allergy-free, in many colors and designs, non-cracking, may be either washed or dry-cleaned. Swatch samples available. SARAN. For more information circle 132 on coupon

**Spin-a-Test**, new model HVBF, offers 30x30 dual board (flannelboard and blackboard), and 15" spinner-pointer attachable to either side. \$22.50. SPIN-A-TEST. For more information circle 133 on coupon

**NEWS**

**IN THE**

**TRADE**

**Who Owns the Oldest Victors?**

The Victor Animatograph Corporation wishes to locate the ten oldest Victor 16mm sound on film projectors still in use, and will exchange them for the latest model at no cost to the owners of the veteran units. The offer is made in connection with Victor's observance of the 25th anniversary of its introduction of the first such projector, in 1933. Other "firsts" claimed by Victor include the initial 16mm camera and projector (1923), and the first sound-on-disc 16mm projector (1931). From now until December 31, 1958, the ten oldest projectors, as determined by factory manufacturing records, will be exchanged for new machines.

**RCA Develops Portable Color TV System**

Laboratory developments have been completed, according to Dr. V. K. Zworykin, for a fully transistorized portable color television system using so little power that it can be operated from automobile-type storage batteries. Contained in two compact units, weighing a total of only 65 pounds, the laboratory model uses less power than the sealed-beam headlights of an auto. The system is designed for closed-circuit applications in education, industry, defense and research. Some of its components, however, are not yet commercially available.

The performance of this experimental transistorized system compares with that of equipment employing the half-inch Vidicon and vacuum tube circuits. The 20-pound camera employs three developmental RCA half-inch Vidicon pickup tubes, and will permit the use of standard 8mm motion picture type lenses.

**Teachers' Guide On "Bold Journey"**

The "Bold Journey" television series, broadcast over ABC and sponsored by the Ralston Purina Company, aims at a school as well as family audience. Teachers' guides, prepared with the assistance of Dr. Irene Cypher, Associate Professor of Education at New York University and editor of the Filmstrip Department of this magazine, are available free from either the network or the sponsor. The guides provide a synopsis of the film, suggestions for classroom discussion both before and after the telecast, a glossary and bibliography. The sponsor's pitch is limited

It is Unique in the field of Do-It-Yourself Transparencies

**TRANSPRO TECHNIQUE**

(with the Educational TT Kit)

to a quite relevant, small, boxed, nutrition quiz.

Alaska, New Zealand and the Congo served as locales of the September programs, and the September 22 program included a salute to the teachers who used this program last spring, and especially to the 31 such teachers who received travel tour awards from the sponsor.

The guides and other particulars may be had from the Ralston TV-Education Department, Post Office Box 339, New York 19, N. Y.

#### Victor Adds Distributors

The Victor Animatograph Corporation is supplementing its A-V dealer distribution network by the appointment of three major photographic equipment distributors to service territories outside those served by the exclusive A-V distributors. The new channels are Eastern Photo Supply, Raygram Corporation and Hornstein Photo Sales.

#### L. A. Schools Buy 200 Record Players

The city school board recently purchased 200 variable speed transcription players, in natural finish hardwood cases, from Audiotronics Corporation. These are 4-speed, variable control units, with detachable speaker enclosure and cover.

#### Photokina — Cologne

The annual "Photokina" international photographic and cine exposition takes place this year at Cologne, West Germany, with over 500 exhibitors, of which 44 will be from the U.S.A. The dates: Sept. 27 to October 5.

#### Physical Science Films from MIT

Eight science teaching films have been completed in the program of the Physical Science Study Committee at the Massachusetts Institute of Technology, and "good progress" is being made on 20 others by Stephen White and the film group. None of the films have been used as yet, but it is expected that they will be tested soon in as many as 30 of the 200 schools offering the new science courses experimentally this year.

#### Report on Edinburgh

Ralph Creer, head of the motion picture department of the American Medical Association, brought back a report from the Edinburgh Film Festival that should be headed by American film producers who enter their product at this international show. According to Creer, only 35mm prints are shown in the big public theatre sessions, the backbone of the festival. The 16mm prints are shown only in special screening rooms accommodating not over 140 people.

# Looking for Something New?

HERE IS YOUR KEY TO THE AUDIO  
VISUAL RELEASES OF 1957-1958

## The BLUE BOOK of Audio-Visual Materials

● films

● slides

● filmstrips

● recordings

the ONLY source-book that completely correlates  
all four principal types of instructional materials

**Costs Only \$1.00**

The new BLUE BOOK lists all these major types of teaching aids under the same subject heads. The listings include: title, type of material, length, silent or sound, color or black and white, television clearance, sale and/or rental price, primary source of distribution, release date, content description, and recommended age level.

For more than 30 years the BLUE BOOK has been the desk-top reference and work-book of leading audio-visual education administrators. Its first 28 editions, revised annually, were cumulative, those following list only the new releases of their year. This year, again, the Blue Book issue lists, classifies and indexes the new offerings released during the past academic year. Every subscriber gets the BLUE BOOK — and a great many extra copies are sold for all-year reference use in film and other libraries. A-V administration offices, research and production centers, in short — everywhere that accurate release data is needed quickly, handily, constantly! *This makes the annual BLUE BOOK issue a doubly useful one for our subscribers — and, consequently, for our ADVERTISERS.*

# FINER WORKMANSHIP MEANS LONGER PROJECTOR LIFE

Operation of projector mechanisms in "run-in" cabinet is one of many quality controls that assures long life of Victor projectors.

## Victor sets highest standards for projector quality

Victor 16mm sound projectors have justly earned a reputation for turning in *extra* years of trouble-free service. Just take a look at any new Victor to see why—and you'll find the answer in quality workmanship and materials that meet the most rigid specifications.

For example, every projector mechanism is operated continually for 6 hours to check performance before complete assembly. *Each* amplifier is fully tested with a battery of electronic instruments. Sapphire-tipped film

shuttles are *individually* inspected under high magnification. Measurements of light output and movement of film over sound drum are made for *every* projector to assure brightest pictures and clearest sound.

This kind of attention to detail has always paid off in greater dependability and lower maintenance costs with Victor projectors. So compare workmanship before you order your next projector—and you'll be sure to specify Victor.

### NEW VICTORS FOR OLD—FREE

We wish to obtain the ten oldest Victor sound-on-film projectors still in use—and offer to exchange them for brand-new Victor Assembly 10 models at absolutely no cost. If you believe that your Victor qualifies, simply fill out coupon and mail before this offer expires on December 31, 1958.

**MAIL BEFORE DEC. 31, 1958**

# Greatest Brilliance Ever Achieved in a Classroom Projector!

GRAFLEX SVE

## SCHOOL MASTER

For filmstrip or slides, there's no finer classroom projector than the School Master. Specifically designed for educational use, these projectors utilize new Sylvania Tru-Focus lamps and a newly designed optical system to give a brilliance of screen image never before achieved! Visual material is always presented with maximum effectiveness and impact with a School Master!

Easy operation and simple design characterize these projectors. Filmstrips or slides may be projected interchangeably—and the change from one to the other may be made quickly and easily . . . without removing or adding parts.

Handy telescoping handle facilitates carrying from place to place. Framing and threading of filmstrips is simple and easy. The whole optical system removes as a unit for cleaning. Cooling is accomplished by a powerful 4-blade fan. Comes equipped with 5" f/3.5 color corrected and coated lens. Lenses in other focal lengths and f-values available.

### Prices

School Master 750 (750-watt model—Cat. No. 3828) \$99.50; the 750 RC (750-watt model with remote control—Cat. No. 3826) \$134.50; and the accessory Rewind Take-up (Cat. No. 3880) shown attached in the illustration above is only \$7.50.  
The School Master 500 (500-watt model—Cat. No. 3809) \$84.50; and the 500 RC (500-watt model with remote control—Cat. No. 3808) is \$119.50. Both models accept accessory Rewind Take-up.

## backbone of Audio Visual Programs

### GRAFLEX AMPRO SUPER STYLIST PROJECTORS

Designed for heavy usage, Super Stylist 16mm. sound Projectors have long been the major unit around which audio-visual programs are planned. These projectors are completely flexible—have both sound and silent speeds. They are easy to thread. Their triple-claw movement engages three film sprocket holes simultaneously permitting damaged film to go through easily and smoothly. Film gate and optics are easily accessible for cleaning. Film bearing surfaces "flame plated" for film protection and long life. Aspheric condenser lens. Interchangeable projection lenses. Jack for microphone or phonograph.

**Three Models:** Super Stylist 8 (Cat. No. 3970) has an 8-watt amplifier and 8" speaker. Super Stylist 10 (Cat. No. 3971) is equipped with a powerful 10-watt amplifier and 10" speaker. Super Stylist 12 (Cat. No. 3972) features a 10-watt amplifier and has separate case-mounted 12" speaker.

For additional information on School Master or Super Stylist Projectors and their accessories, write Dept. ES-118, Graflex, Inc., Rochester 3, N.Y. A subsidiary of General Precision Equipment Corporation. Prices are subject to change without notice.

Exciting film footage from the nation's leading observatories helped create **THE SUN and how it affects us** and **THE MOON and how it affects us** including closeup views of a satellite launching

As up-to-date as today's headlines are two new films from Coronet—**The Sun and How It Affects Us** and **The Moon and How It Affects Us**. Using unique telescopic motion pictures, the films furnish a dramatic picture of the nature and characteristics of these cosmic bodies and show in detail their relation to the earth and their effects upon it. The film on the sun shows its corona, sun spots, and solar flares and illustrates how the sun, either directly or indirectly, causes rain, winds, and magnetic storms and creates energy and natural resources.

**The Moon and How It Affects Us** similarly portrays the basic facts known about the moon. Physical features of the moon, its movements and positions in relation to the earth, and its effect on the earth are all colorfully portrayed. A spectacular highlight is the launching of a satellite. The camera shows the rocket prior to firing and immediately after it leaves the launching platform, with long shots of it shooting into space.

Both films are available in full, natural color and in black-and-white. Each is one reel (11 minutes) in length. The films are designed for science classes in grades 4-9.

Other new Coronet films in color or black-and-white.

**Growing Up (Preadolescence)** (11 min.) This film will do much to allay anxiety and concern which many adolescents feel about their own growth in the normal growth pattern. They see that growing up takes place in an uneven fashion, differing between boys and girls and varying with individuals and age. To increase understanding of how growth is regulated, the role of the endocrine glands is explained. *Health, Grades 4-9.*

**Our Senses: What They Do For Us** (11 min.) This excellent picture illustrates how the five senses of the human body work alone and together to make us aware of our surroundings, to protect our bodies, and to increase our enjoyment of living. The care of these vital sense organs is emphasized. *Health, Grades 4-6.*

**Preview these films . . .** To preview these films for purchase, merely indicate your selections on the coupon. The only obligation is return postage. We will be happy to send you also a complete catalogue, describing more than 800 outstanding Coronet films in either color or black-and-white, with information on preview for purchase or rental.

## Cover Scene

This month's cover features a still from the animated color cartoon, "History of the Cinema," created by Halas and Batchelor, Ltd., of London.

Through satirical wit, this film reveals the development of the motion picture, beginning with its deepest roots as a vague glimmer in the mind of the cave artist. It also recognizes that underlying the amazing technological conquests of the cinema and allied arts, the eternal problems of content and ethics remain.

"The History of the Cinema" is presented by Brandon Films, Inc., 200 West 57th Street, New York 19, N. Y.

## American Education Week Celebrated This Month!

November 9-15 has been set aside as the thirty-eighth annual observance of American Education Week. This year titled "Report Card U.S.A.," the celebration is sponsored by the NEA, the American Legion, the U. S. Office of Education, and the National Congress of Parents and Teachers.

This observance will no doubt give rise to considerable "editorializing" on the need for improving our educational system. We can only hope that this concern is based on something deeper than the recent alarm over Soviet advances, well founded though it is. In his third and final editorial on the National Defense Education Act, Paul Reed points out the urgent necessity of thoroughly understanding what we're doing and what we want before we forge ahead on a program and make requests for equipment. It is up to those who *work* with this equipment, the audiovisual coordinators and teachers, to see that the funds appropriated by Congress are put to the best possible use. Otherwise they may be administered according to political involvements and/or general theories without the all-important regard for individual needs.

Amo De Bernardis supports this idea in his interview, "This Administrator Sees Audiovisual in Perspective," conducted by E. Milton Grassell. He asks that teachers and audiovisual specialists be more vocal in their demands and arm their requests with convincing data.

## Army Points Way to Better Language Teaching

The many possible uses of audiovisual materials to further language training are thoroughly discussed in J. Michael Moore's article "Improving Language Teaching." The foreign languages have been very slow to adopt these aids, and the Army has furnished the spur as well as many of the most progressive methods now in use. This article was adapted from a paper prepared for presentation during the eleventh annual AV conference at San Diego State College. This in turn grew out of an article, "The Army Language School: An Evaluation," published in *Modern Language Journal* for November, 1957.

## AV "Do-It-Yourself"

In line with our policy of presenting the immediately useful and practical alongside the theoretical and philosophical, the November issue contains some excellent how-to-do-it stories. James H. Greene and Justus Rising demonstrate a method for making flannel boards truly three-dimensional. Although originally conceived for use in engineering classes, this trick can be applied effectively to demonstrations in mathematics, art, etc. Equally helpful are articles by Gidley and Hunt, Halvorsen, and Howard.

## Looking Into December

The next issue of *Educational Screen and Audio-Visual Guide* has been planned around the theme of summary and forecast. A summary of the year's audiovisual achievements offers us the opportunity both to take pride in accomplishments and to learn from less successful efforts.

And the forecasts, with such authorities as Alva I. Cox, Jr. (National Council of the Churches of Christ) and Emily S. Jones (Educational Film Library Association, among the contributors, should take on special value and significance due to the recent National Defense Education Act.

In addition, our department editors will devote at least a part of their attention to variations on this theme.

—ES

# RADIANT

# LENTICULAR SCREENS

## FOR LIGHTED ROOM PROJECTION

Of vital importance to all users of audio-visual aids is this new and different kind of "lenticular" screen surface—the result of more than 7 years research and development work by leading optical engineers and physicists. Actual tests have definitely proven that this surface is extremely effective for projecting in undarkened or even lighted rooms where no extreme or unusual ambient light conditions prevail.

## TESTS PROVE

Special electronic testing equipment is used to check the efficiency of all reflective surfaces by Radiant's engineering staff. This equipment measures accurately light gain (brightness), percentage of fall-off, quality of reflection, and other factors vital to good projection results. The new Radiant "lenticular" surface has been subjected to these exacting tests with the following findings:

- 1 Radiant "lenticular" Screens showed a very high brightness gain with a minimum of fall-off at sides.
- 2 Radiant "lenticular" Screens provide increased brightness to an area 45° to each side of axis, thus offering a 90° good viewing area.
- 3 Radiant "lenticular" screen surface reflects colors with increased vividness and greater contrast.

**THERE ARE MORE THAN 100,000 TINY LENSES** on each Radiant "lenticular" screen surface—that concentrate and reflect light with maximum brilliance over a wider viewing area. This surface is fungus and flame proof and washable.

**THE NEW "EDUCATOR" SCREEN—WITH LENTICULAR "UNIGLOW" . . .** screen surface is available in sizes from 37" x 50" through 70" x 70". Exclusive TOEmatic leg lock, all-metal slat bar, extreme height adjustability, and many other features.

## Pathescope Company Films Berlitz Language Courses

Berlitz Publications, Inc., and the Pathescope Company of America have signed a fifteen-year agreement to film Berlitz language courses for the benefit of schools, industry and government. Pictured discussing the storyboards for the series are: Frederick Carrier, Pathescope producer-director in charge of filming the new language series; Edward J. Lamm, Pathescope president; Robert Strumpfen-Darrie, president of Berlitz; and Charles F. Berlitz, vice-president of the 80-year-old organization and grandson of the founder.

Forty lessons on each subject will be produced on 35mm color filmstrips, and six- to eight-minute records will accompany each filmstrip. Leading educators are working with the producers to insure suitability to school curricula.

All the courses are to be filmed on locale. Early in October work was begun on the French series; Spanish, Italian, German and Russian will follow in that order. No professional actors will be cast; instead, to achieve a higher degree of authenticity, individual French people will be used and will be photographed in their natural surroundings, going about their usual daily activities. The series should enable the student to understand provincial dialects as well as Parisian French.

The first series of the French course will be ready by January 15, 1959. Pathescope intends to make each course, as it is completed, available for sale to public schools, colleges and universities, industry and government.

## Closed-Circuit TV to be Used for Air Force Teaching

The United States Air Force will be operating its first permanent instruc-

tional system for higher education by November of this year. Major General Richard H. Carmichael, college commandant, announced recently that the system is being installed at the Air University's Air Command and Staff College, Maxwell AFB, Montgomery, Alabama.

This system, which will affect approximately 600 students per class, will link 44 classrooms and three auditoriums of the School. Five live camera "chains," each including a Dage 320 professional TV camera, 16 mm projector, two slide projectors, and one film chain with kinescope facilities will comprise the system; 64 TV monitors will be used.

Dage Television Division, Thompson Products, Inc., Michigan City, Indiana, is the designer.

## Toynbee Lectures on Film: Previewed in Kansas

Arnold Toynbee's lecture series, "A Changing World in the Light of History," was filmed on the scene at Washington and Lee University by Encyclopaedia Britannica Films, Inc. These lectures, with following discussion periods, constitute what is claimed to be the first filmed series of educational films designed for the college level.

The premiere showing was held at the Executive Mansion in Topeka, Kansas, with Governor George Docking as host. Educators from colleges and universities throughout the state were invited.

## Educational News Series Begins Third Year on Air

"Spotlight on Schools," weekly series of broadcasts of news in education, has begun its third season on the stations of Westinghouse Broadcasting Company, Inc.

Commentator is Henry Toy, Jr., president of the National Citizens' Council for Better Schools; news is gathered and written by the staff of the Council.

The ten-minute program is followed on each station by five minutes of local educational news. It is produced by Gordon Hawkins, WBC Educational Director, and directed by Kris Kritikos, Assistant Director, Commu-

nications Division, National Citizens' Council.

WBC makes "Spotlight on Schools" available without charge on other educational and commercial stations.

## Conference on Educational TV Held at Purdue

Twenty representatives of colleges and universities and two from the field of commercial television joined with ten experts in research and experimental work at the Conference on Televised Instruction held at Purdue last month. The conference, sponsored by the National Association of Educational Broadcasters in cooperation with the Purdue Television Unit, concluded that television

(1) can improve the quality of instruction.

(2) can be used to multiply the effectiveness of a good teacher.

(3) can be used to extend the boundaries of the campus for programs of continuing education.

(4) can be used effectively for teacher training.

(5) can be used to bring the same or comparable instruction to more students at less cost.

(6) can expand the efficiency of use of classroom and laboratory facilities.

(7) can result in academic prestige for faculty members comparable to that resulting from printed research.

The Conference realized that there are areas and subjects which do not lend themselves well to televised instruction and that the personal contact between teacher and student is highly important. But it stressed that there are possibilities for educational TV which have scarcely been touched.

"Fine, fine, Osgood, now breathe through your mouth . . ."

# OVER THE YEARS

Flexalum Audio-Visual blinds  
will be your most economical,  
most practical  
classroom window covering!

FLEXALUM A-V BLINDS GIVE YOU EVERYTHING FROM FULL DAYLIGHT (WITHOUT GLARE) TO "PROJECTION" DARKNESS—yet they *cost less to install* than any combination of black-out and conventional window covering. What's more, they *cost less to maintain*, too. Flexalum's special spring-tempered aluminum, wipe clean plastic tape and nylon cord give years of trouble-free service. (That's certainly a comfort in these days of ever-increasing maintenance costs.) And, the greater number of slats per blind, special tape construction and light trap channels enable you to turn any classroom into a dark auditorium at the flick of a cord. Less light comes in... less money goes out—with Flexalum A-V blinds... sold with a written five year guarantee by Hunter Douglas Aluminum Division of Bridgeport Brass Co.

(Installation shown: Carle Place High School, Long Island, N. Y.)

Hunter Douglas Aluminum Corp.  
405 Lexington Ave., New York 17, N. Y.

## SMPTE Holds Convention

The 84th Convention of the Society of Motion Picture and Television Engineers at Detroit, October 19-24, concentrated very largely on educational, industrial and television applications of the medium. The first day's program dealt with laboratory practices, but particularly with 16mm color release printing by negative-positive, and the evening film program scheduled documentary and educational subjects. All day Tuesday was given over to "A New Look at Films for Industry and Education." This emphasis continued—Wednesday, kinescope recording problems and TV equipment; Thursday, closed-circuit TV for teaching, machine language translation, and designing for international television; Friday, editing sound problems. This emphasis on the profession's non-theatrical phases reflects the heavy concentration of non-theatrical production and manufacture in the middlewest and is in line with SMPTE program policy of many years standing. Programs of West Coast conventions deal predominantly with theatrical and commercial broadcast developments.

## Thirty-eight Cities to Have Controlled Reading Institutes

Educational Developmental Laboratories, Huntington, New York, is sponsoring a nationwide series of Controlled Reading Institutes for teachers of developmental and remedial reading. They have been planned to provide teaching, administrative and guidance personnel with:

(1) more complete understanding of the reading act through eye-movement photography

(2) practical techniques that provide for the development of the functional as well as the interpretive functions of reading

(3) guidance in the integration of instrument methods into reading programs.

The Reading Eye, new eye-movement camera which will be used for diagnostic reading testing, will be introduced at these one-day institutes, along with the Tach-X, Controlled Reader and an enlarged library of filmstrips.

## Columbia College Gives Award to Aid Science Teaching

Dr. James M. Davidson, Chairman of the Science Department of Chicago's Senn High School, was awarded a Magnecoid Citation tape recorder by

Columbia College, Chicago. He was winner of a competition designed to develop better methods for stimulating interest in science.

Dr. Davidson (center) receives the award from Dr. Daniel Howard (right), dean of students at Columbia College, and in turn presents it to S. L. Nowinson (left), principal of Senn High School.

## People in the News

William C. Dempsey, program manager for KPIX television, has been appointed Coordinator of School Information and Technical Services for the Alameda County, California, schools.

He has served KPIX for six years—as Education Director, Production Manager and finally, Program Manager. In 1954 Dempsey was selected by the U. S. State Department to represent all U. S. Commercial TV stations at the first UNESCO Conference on Educational and Cultural Television, held in London. He recently returned from France and Belgium, where he served as project director for a KPIX grass-roots cultural exchange program.

John C. Moriarty, Director of the Audio-Visual Center at Purdue University, has been elected president of the University Film Producers Association, for a two-year term. He succeeds O. S. Knudsen, Director of Motion Picture Production, Iowa State College.

Other officers of UFPA are: Daisy Sickles, Ohio State, secretary; Oscar Patterson, UCLA, treasurer; and Ned Hockman, University of Oklahoma, vice-president.

Syd Cassyd has severed relations with Ver Halen publications. He is continuing in the production and marketing end of television.

Dr. H. K. Newburn, former president of the Educational Television

and Radio Center, has accepted a position as consultant to the Ford Foundation. In his new assignment, Dr. Newburn will make a study of faculty personnel policies in selected state universities. He will visit each of the universities and confer with administrative officers and members of the faculties.

Paul Spencer Flynn, Oakton, Virginia, has received the Frank Spindler Graduate Scholarship in Audio-Visual Education from the University of Virginia.

This scholarship, awarded for the second year to the University, was established by Encyclopaedia Britannica Films as a memorial to the late Frank Spindler of Hampden-Sydney, Virginia.

## NAVA Discusses "The Act"

The National Defense Education Act was the major item of discussion at the meeting of the Board of Directors of the National Education Association, held in Chicago October 17-18. Approval was given the final draft of a 16-page book detailing the provisions of the new law as it affects the audiovisual user and his suppliers. This book, "AV-845," takes its name from the official title of what is generally known as the Hill-Elliott bill. In the official language of Congress itself it spells out the intent of our lawmakers, sets out the amounts already authorized and appropriated, and the action required by the chief educational agency in each state. There are special headings dealing with the various types of equipment and materials that can be bought; the "minor alterations" that would include room darkening and presumably acoustical treatment to permit effective use of audiovisuals; loans to private schools; and the state agency procedures which during the first year require no matching money from the states. In quantity, the booklet sells for seven cents per copy (half the actual cost of preparation); samples can be had free from NAVA, Fairfax, Virginia. To expedite the handling of many routine matters the board divided itself into four subcommittees, which met separately and reported findings to the main body.

The annual spring meeting will be held at New Orleans, January 22-23, with a meeting of the 1959 Convention Committee meeting the preceding day.

# MORE HOURS OF USE

with the Kodak Pageant Projector, AV-085

1) NO UNTIMELY interruptions of your 16mm film schedules because of breakdowns caused by improper oiling. The Pageant Projector is lubricated for life.

2) YEARS OF USE without replacement is provided by the new pull-down tooth of tungsten carbide. Tested more than 2000 hours, it evidenced no grooving.

3) NO MUSS, FUSS, or lost time in setting up. With folded reel arms, attached drive belt, and printed film path, your Pageant Projector is ready to go on a moment's notice.

What's it all mean? That the Pageant AV-085 is the projector that's always ready to go on with the show. Cost? Just \$439!\*

P.S. Naturally you get sparkling, detail-filled pictures along with full, natural sound. Why settle for less? See a nearby Kodak Audio-Visual Dealer for a demonstration. Or write for Bulletin V3-22.

*\*Price is list, subject to change without notice.*

EASTMAN KODAK COMPANY, Dept. 8-V, Rochester 4, N. Y.

*... and Ekotape, too!*

What a difference when a subject is presented *professionally* on the Ekotape 320! There's sharpened interest, eager response . . . even the duller subjects "come to life" when conventional teaching methods are supplemented with this newest "educator aid."

In languages, mathematics, speech, music — wherever it's used — the 320 speeds response, opens new avenues of learning. Makes teacher's efforts more efficient and rewarding.

The Ekotape 320 recorder-reproducer is one of the most practical and versatile teaching tools for classroom use. Rugged luggage-type case has reinforced corners to take casual handling. It operates with a minimum of simply operated controls. Even small students learn to record and playback in a few minutes. Clear, crisp, high fidelity tone — volume to carry to the largest student meeting.

New Ekotape 320 is priced to match modest school budgets. Write for Bulletin R12A1 today, or

## Research Papers Requested for DAVI Meeting

The Research Committee of the Department of Audio-Visual Instruction invites those individuals who desire to present a paper at the annual meeting to be held this year at Seattle to communicate with the individuals shown below. These papers should be in written form and require from 20 to 30 minutes to present. The research papers might deal with any phase of the audiovisual field including television. Persons interested in presenting such a paper should communicate with either of the following:

W. C. Meierhenry, Chairman

University of Nebraska  
Lincoln, Nebraska

John A. Moldstad, Assistant Chairman

Indiana University  
Bloomington, Indiana

## Calendar of Coming Events

- Nov. 9-11 — Texas AV Education Association, annual meeting, Dallas.
- Nov. 15 — Planning committee for 1959 NAVA Western Conference, Olympic Hotel, Seattle, Wash.
- Nov. 21-22 — AV Education Association of Southern California, southern section, San Diego, Calif.
- Dec. 4-6 — New York State AV Council, Hotel Syracuse, Syracuse, N. Y.
- Dec. 28-31 — Speech Association of America, American Educational Theatre Association and allied groups, national convention, Conrad Hilton Hotel, Chicago, Ill.
- Jan. 22-24 — NAVA Midwinter Conference, Jung Hotel, New Orleans, La.
- Feb. 14-19 — AASA national convention, Atlantic City, N. J.
- April 1-4 — American Film Festival, New York City.
- April 17-18 — NAVA Western Conference, Olympic Hotel, Seattle, Wash.

## New Management and Control for Ver Halen Publications

*Film and A-V World, Teaching Tools and Home Movies*, formerly published by the Ver Halen Company of Hollywood, as well as all other publications issued by this firm, have been turned over to the Sidale Publishing Company. The latter is headed by Harry C. Simonson, who formerly was associated with the Ver Halen Company as editor and associate publisher.

New offices for the above magazines are maintained at 672 South Lafayette Park Place, Los Angeles 57, California.

One doesn't have to consult a crystal ball to predict that we're headed toward phenomenal growth and development in the use of audio equipment in language teaching. Even without the assistance of federal funds it would happen. But with the spur and the urgent inducements of the National Defense Education Act it's possible that school administrators will be whisked into installing language laboratories even before they have the least notion what they're for or what they can do.

"Language laboratory" is one of the newest terms on the audiovisual front. No one knows its precise meaning, but everyone uses the words as if everyone knew exactly what was meant. Some use the phrase to describe a language classroom with a tape recorder in it. Others know that it means a room in which there is an elaborate console with dozens of completely audio equipped learning stations, with flexible wiring that permits any student or group of students to hear a choice of half a dozen channels and to record their own imitations or comments at will.

If high school administrators, under the privileges of the Defense Education Act, merely request that X number of classrooms be converted to language laboratories, no one could possibly predict what they'd get. But it's probable they'd get something they didn't want and couldn't use. You can't simply specify a "language laboratory." Some hard thinking must be done first. Language instructors and audiovisual personnel working together will have to think through the specific adaptations of listening and recording equipment that will meet the needs of the instructional program.

For each school and for each "language laboratory" installation there must be specific answers to such specific questions as these:

Should students hear recorded language? All or some? When?

Is it better for them to hear from a loudspeaker or earphones?

Should they all hear the same record or tape at the same time?

Is the quality of the sound important?

How important is it for pupils to comprehend the meaning of spoken language?

How important is it for them to learn to speak the language?

Does the testing program require evidence of the ability to speak the language being learned? (The Regents' examinations in New York State, for instance, require no proof of speaking ability!)

Should all pupils be provided the opportunity to record their pronunciations? All at the same time?

Is it desirable for the teacher to listen in while students record?

These questions are only suggestive of all that must be answered before the best language laboratory for a school can be designed and installed. Someone is soon going to set down *all* the questions in the form of a check sheet that will serve as a sure guide for language laboratory installations.

In the meantime we hope that we don't sound pessimistic or too discouraging to those concerned with the use of audio equipment in language instruction. We're convinced that this will be the most significant audio development of the decade—that there can be a break through to new great successes in the oral-aural teaching of foreign languages in the public schools. But we see dangers and risks if school people don't give this complex subject all the thought it deserves and demands. College installations cannot be copied blindly for use in high schools. College teaching objectives differ from high school objectives. A school should not blindly duplicate the equipment of another school unless teaching objectives and methods are identical.

All of us in the audiovisual field should be challenged by the urgency of the times to improve the teaching of foreign languages. Money is being provided to get the materials and equipment to do the job. It should be spent wisely and well so that instruction *will be improved*, and so that the "national defense needs of the United States" will be met as the Congress intended it should be.

# Break Through the Audio Barrier

Paul C. Reed

Dr. Amo De Bernardis

*A tape-recorded interview with AMO De BERNARDIS, Assistant Superintendent, Portland (Oregon) Public Schools; conducted by E. MILTON GRASSELL, Department of Visual Instruction, Oregon State System of Higher Education*

## This Administrator See

**H**OW does a well-known A-V leader, active for over twenty-two years as a classroom teacher, audiovisual director and administrator, view instructional materials after five years of administrative experience? What would he do differently if he were an A-V director again after his experience as a top school administrator? What future is there for A-V?

Interested? All right! Here are Dr. Amo De Bernardis' answers to these questions and several more. But first, let's start with the administrator's view of A-V.

**Question:** Dr. De Bernardis, you are a school administrator. Tell me, how do you look at the audiovisual program?

*De Bernardis:* Mr. Grassell, when one looks at the audiovisual program, he must recognize that it is something like driving into a city. Your concept of the city varies according to the route you take. The audiovisual program, when I was a supervisor, looked considerably different to me than it does now as an administrator. As an administrator, one must take a look at all aspects of the school system and try to keep the various programs in balance. If one is not careful, a particular program may get completely out of balance with relation to the rest of the school system.

**Question:** Are you implying that one must take several routes into the city to get a more realistic view?

*De Bernardis:* That's right, Mr. Grassell, and the same applies to audiovisual. Audiovisual has to be viewed in relation to the total school program. As you know, any good school system has to have a well balanced program so that the classroom teacher can do his best job.

**Question:** More specifically, just what do you mean?

*De Bernardis:* As you well know, this balance means that various departments must get the money and support they need to carry on the work which is necessary to the school system. I recognize that each individual specialist feels that he should have more and more; however, the admin-

istrator has the job of seeing that each has balance. Many times the individual specialist feels that he is not getting a fair share of the budget, or facilities. This is due to the fact that sometimes the specialist is so close to his own work and so enthusiastic about it that he fails to see the need and value of other services.

**Question:** In a way, are you saying that even as important as audiovisual is, it is only one aspect of the total school budget?

*De Bernardis:* Yes. Let's face it. The administrator is faced with many requests from all departments which make up a school system. The budget item is just one of these requests, but it is a very important one. For example, a department could not operate without an adequate budget. The question always comes up though, "What is an adequate budget for audiovisual or for some other department in the school system?" It seems to me that any budget requests must be backed up by sufficient data to give the administrator a good insight into why the request is being made.

**Question:** Do you mean to say that there is little opportunity to increase the audiovisual budget?

*De Bernardis:* Apparently, I left the wrong impression. What I meant to say is that other departments have as legitimate requests as the audiovisual department, and, as I mentioned before, the request for increasing the audiovisual budget must be backed up by sufficient data so that the administrator in charge of budgets can make an intelligent decision in terms of the money available. If the school systems had unlimited money, this would be no problem, but as you know, all school systems are concerned with limited amounts of money to spend for the educational program.

**Question:** Now I feel better. But I am still slightly disturbed. Just how could I, as an audiovisual enthusiast, go

about getting our fair share of the school budget?

*De Bernardis:* That isn't as difficult as it often appears. The usual procedure is for the school's audiovisual director to prepare a budget request. He should be a spokesman for teachers, as he is making a request for audiovisual materials which will be used by the teaching staff. However, it is my belief that sometimes the teachers themselves should be more vocal in terms of what their needs really are. In my experience, teachers have ideas of what they need in terms of doing an instruction job and too often these requests are not funneled to the administration. It seems to me that teachers should become as vocal in terms of asking for better facilities and materials as they are in asking for an increase in salaries. What I am trying to say is, that all claims for increased services should be backed up by accurate data. Audiovisual directors should keep good records of needs. This data should be crystal clear, so the superintendent and the school board will have no questions as to the needs.

**Question:** If I understand you correctly, you feel that we haven't done a good job of convincing the administration of the need to expand audiovisual facilities?

*De Bernardis:* That is exactly what I mean. I feel that as a group we talk to ourselves too much and many times

Unless we can provide proper facilities for the use of audiovisual materials, we can never expect all teachers to make use of these aids. The pathetic part of this is that these buildings will be in use for the next fifty years and the students will be denied the use of these aids in instruction.

**Question:** In regard to light control, some people claim that the so-called daylight screens eliminate the need for blinds, drapes, full closure blinds, and jalousies. What's your experience and opinion?

*De Bernardis:* I have read and heard a variety of claims for daylight projection but my thinking is that we should have not only darkening for a classroom but complete light control so that the teacher can adjust the daylight in the room to suit conditions which he feels are desirable. This would include projection, use of science materials, light experiments, etc. There is no substitute for good light control in each classroom.

**Question:** I see. Now let's turn to the international scene. There is a lot of current talk about the Russian educational system. Could we profit by adopting their methods?

*De Bernardis:* This whole question of Russian education as it applies to audiovisual materials is an interesting one.

# AUDIOVISUAL IN PERSPECTIVE

we are not able to convey this enthusiasm and need for audiovisual materials to the school administrator and the school board. I feel that we should spend more time in the community and with the administrator to keep them informed on what the needs are and the importance of the audiovisual materials in the teaching program. I also feel that we should do more writing in periodicals, such as administrative journals and curriculum journals. I am sure that the writing we do in audiovisual periodicals is very important. However, the topics are usually read by people who are already convinced of the program. What we need to do is to point out our needs to the school board and administrators who, in the final analysis, make up the budget and approve the expenditures for the materials.

**Question:** I find many good articles in audiovisual magazines. Why wasn't some of this material published for administrative journals?

*De Bernardis:* This would be hard to answer, but I have a hunch that perhaps the majority of audiovisual people who write in the audiovisual field are searching for prestige within their own group, rather than trying to strengthen the audiovisual field by writing for other journals.

**Question:** That sounds plausible. And no doubt there are other hurdles. Can you think of some?

*De Bernardis:* There are a number of hurdles, and one of the most important ones is the matter of school buildings. I was amazed at the number of new buildings which are being planned and built that do not provide for adequate use of audio and visual materials. If we had really convinced school administrators on the value of audiovisual materials for instruction, all of the buildings would have been planned for their use. Many new school buildings being completed today have no provision for light control. In some cases, acoustics and outlets present a problem.

It is very difficult to get accurate data. From what little I have been able to learn from reading and talking to people who have some knowledge of the Russian educational system, it would seem to me that Russia has done something which we could well afford to emphasize. The Russians have placed the teacher at a prestige level, which is far beyond anything we have done in this country. Also, from what little I know, they have provided adequate facilities and materials for the classrooms. However, we should not be carried away and try to mimic all of the things which Russia is doing. After all, Russia is developing an educational system which will develop a citizen for a totalitarian society. We are developing a system for a democratic society and we should always keep this uppermost in our mind. I have heard that in the audiovisual field, the Russians have produced more instructional films in five years than we have in twenty-five years.

**Question:** That's a shocking comparison, Dr. De Bernardis. Do the Russians have adequate motion picture projectors to handle all those films?

*Dr. Bernardis:* I can't answer that. However, I would assume from what I have heard that the Russians have provided not only the projectors but the clerical help and the facilities with which to use these films. This is something that we in America could well afford to consider. I believe that education of our future citizens is one of the most important functions which our society has.

**Question:** That example, alone, seems to point out that the Russians are very much aware that adequate teaching tools are essential. Returning to our country, what can we do to improve our audiovisual services?

*De Bernardis:* To me it is as simple as this. If we are going to expect a teacher to do a good job, then we must provide the necessary tools, and facilities for that person to do the job. We don't expect the auto mechanic, the

## HELPFUL BOOKS

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgor Dole. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$6.25.

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgor Dole. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 Illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Tenth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Holsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Frozier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Starbridge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

doctor, or the dentist, to do a job without adequate facilities and tools. If we expect the teacher to do his best job, then we must provide him with the best tools and facilities.

**Question:** Assuming that we had an adequate budget in a certain school to provide all these items, how should these materials and equipment be handled?

*De Bernardis:* Mr. Grassell, as you know, I have been one of those who believes that a central instructional materials center is the answer. It would seem to me that we cannot afford to have separate departments handling the various teaching tools. I compare the instructional materials center to a modern-day, drive-in shopping center. Here it is possible to get all of the things that a person needs for the household and I feel that a teacher should have this same modern shopping center for instructional materials.

**Question:** What would you include in this super drive-in A-V center?

*De Bernardis:* I would like to change the word to instructional materials or instructional tools, or some term which would give the connotation of all types of materials. I feel that a center of this kind should handle not only the books, films, projectors, microprojectors, and that type of equipment, but also make other aids such as microscopes, typewriters, tool kits, in fact, anything the teacher may need to carry on a good instructional program in the classroom. In fact, I would go so far as to include live animals and various specimens which would be needed for instruction.

**Question:** That sounds like an impressive array of instructional materials. But, if I understand you correctly, all of the school's aids would be locked up in some sort of "supermarket" type center, and . . .

*De Bernardis:* Wait. Let's go back and untangle this. Apparently, I left the wrong impression. I am not saying that this supermarket would be centrally located in one place and that it would be difficult for teachers to obtain the materials. What I am saying is that perhaps a large school system would need one large materials center where materials would be housed and distributed to subcenters out in the schools or in the areas. What I am saying is that the materials must be easy to get, but at the same time we should not have materials left unused on shelves. This could be easily done if you duplicated too many of the materials which are used only occasionally. Here again, each school could have a materials center housing those materials which are used often during the school year. However, the materials

which are used only occasionally could be housed in the central materials center.

**Question:** Well that clears that point. Thanks. Now, getting back to the super drive-in A-V center, who should administer it?

*De Bernardis:* In regard to who should administer the center, this is not a big problem. It seems to me the most qualified person in the school system should handle and administer the center. This might be the school librarian, or the audiovisual specialist, or a curriculum director. I am sure that the teachers are not concerned over who administers the program. They are concerned with getting the materials when needed and in good condition so that they can be assured of having everything operate efficiently when they obtain it.

**Question:** What qualifications should this person have?

*De Bernardis:* The qualifications of a person such as we have discussed would be one who has had some teaching experience with a broad background of school administration and curriculum. It seems to me that it is difficult to set up an effective materials center unless the person who heads that center has some concept of what the instructional program is all about, has a flair for organizational ability, and a flair for salesmanship and promotion. After all, this supermarket also has a selling job to do and to create interest in the use of these materials. I think we could all take a page from some of the better selling procedures which have been developed in the commercial area.

**Question:** What unique services could this person render?

*De Bernardis:* This person would have the responsibility of organizing the services so that teachers could get the material with a minimum of effort. He would have the big job of developing adequate communication with the teachers, administration and the public. The in-service education of the staff would be another very important function.

**Question:** What future do you see for A-V?

*De Bernardis:* My crystal ball is a bit dusty! I would say that the future of audiovisual depends a great deal on how successful we are in getting the teachers and administrators to see that these tools are as important as the textbook. Another aspect which we haven't talked about is TV. It will have a great impact on the whole field of materials; however, it may have the tendency to overshadow some of the other tools and over-balance the program, both from the standpoint of the budget and use.

Director of Instructional Materials,  
Palo Alto Unified School District,  
Palo Alto, California

“AND it came to pass” just as the Good Book says. This time it refers to our Instructional Materials Card Catalog.

With the marriage of library and audiovisual as one—the “Instructional Materials Center”—a common card catalog for both library and audiovisual was a “must.” Our Center was so designed that all materials are within the reach of teachers, and a catalog was necessary wherein all materials could be found.

Since A.L.A. and other library associations do not prescribe just how to catalog audiovisual materials, we found it necessary to make up our own system. So with the cooperation of secretaries, clerks, the Instructional Materials Consultant, and the Director of Instructional Materials, an image was born. This image materialized into a catalog which holds some fourteen different colored 3 x 5 cards which indicate the following areas of materials: Professional Books, Artifacts, Exhibits, Filmstrips, Guides, Pamphlets, Picture Sets, Recordings, County Movies and Filmstrips, Study Prints, Tape Recordings and District Movies, 2x2 Slides, View-Masters, and Publishers' Sample Books.

A Color Code Chart is placed at the top of our card catalog for teachers to

use as a guide in finding the materials wanted. Professional books are filed alphabetically by subject, title, and author, just as usual. All other materials that are audiovisual are filed, alphabetically, along with the professional books. So, for instance, books that relate to the “Colonial Period” are cross-filed right in with filmstrips, picture sets, exhibits, etc., related to this period, with an inserted tab guide preceding, which is labeled “Colonial Period.” Major areas, such as this period, were determined by the various units in our courses of study and also by other subject areas requested by our teachers over a period of years, so that no particular check list was used as an area guide.

Our catalog file shows at a glance the areas in which we are weak, and those in which we are overloaded. Research committees working on any area can immediately make a bibliography from this file and know what is available.

Now this file is in full use in our Instructional Materials Center. As we take evaluations from teachers and persons using it, we find a general feeling of great amazement at the vast amount of material that is actually in our Center for their use. We are really proud of our “Brain Child”!

# “Colorful” Card Catalog

1. Assembling materials.

2. Pouring rubber cement.

3. Dipping acetate in cement.

ARE THE PICTURES you very carefully clipped from your magazines to use in classes beginning to disintegrate into shreds of worn paper? Are they finger-smudged and torn at the edges? Take heart, for now you can give your prize clippings and pictures a lift—right from the magazine pages to a permanent transparency that can be filed away and used again and again. Such a transparency can be used on the overhead projector, or perhaps in the lantern slide projector, and it may also be circulated in the classroom. When you have used it, file it away without worrying about the wear and tear on the picture.

This method of transferring a picture from a magazine page to a transparency was originated by Harvey Frye of Indiana University (as reported in this magazine in February, 1955), and the method has been simplified and developed at the Florida State University Library School. The process is relatively inexpensive, about the only prerequisite being that the magazine you use is printed on a semi-glossy paper that has a good clay base, e.g. *Life*, *Time*, *Look*, *Good Housekeeping*, *McCall's*, *U.S. News and World Report*.

Several methods of transferring the picture to a transparency may be used. They might be divided as follows:

1. The Frisket Method

2. The Acetate Method

3. The Cellophane Tape Method

The frisket method is the one developed by Mr. Frye and makes use of frisket paper and heat. This has been modified and developed over the past few years, and has evolved into the acetate method used at Florida State University which makes use of clear or frosted acetate, rubber cement, and distilled vinegar. The process is based upon the ability of the rubber cement to "lift" the inks from the printed page onto the acetate.

Materials needed include: rubber cement, distilled vinegar, roll of frosted or clear acetate (.005 thickness), small photographic print roller, cotton, clear plastic spray, scissors, pictures clipped from magazines. It should be noted here that if you use clear acetate, you will coat the picture only. However, a frosted surface will afford the best gripping surface for the finished transparency.

Cut a strip of frosted acetate the width desired to accommodate pictures to be transferred, maximum length of acetate should be 25 to 30 inches. Pour the rubber cement into a shallow pan just wide enough to accommodate the width of the strip of acetate. Touch the acetate down near the end, frosted side to the cement, and in a smooth motion, pull the acetate across the surface of the rubber cement, lifting

4. After picture has been dipped and allowed to dry, it is taped to a flat, smooth surface.

5. Acetate is centered over and placed on picture.

# Pictures a Lift!

Tallahassee, Florida

away one end from the pan as the other is allowed to dip toward it. If the rubber cement is too thick, it may be thinned with rubber cement thinner. However, if you thin the cement allow it to stand for several hours before using it so that the air bubbles stirred into it will disappear.

Once the acetate has been successfully dipped, hang it on a line to dry. The cement appears milky but will become transparent upon drying.

Preparation of the picture is next. The picture is dipped in exactly the same manner as the acetate and hung up to dry. If the picture is big enough to cause problems when prepared by the dip method, then the cement may be brushed on with a soft-bristled brush. This should be done with a few quick, even strokes as too much brushing will sometimes smear the ink.

When the acetate and picture are dry, remove the picture from the line and tape it to a smooth flat surface with scotch tape. Use scissors to cut off a piece of acetate the size of your picture. Center the acetate over the picture and bring the picture and acetate together. Once the cemented surfaces touch, they cannot be pulled apart without ruining the picture, so have the acetate centered BEFORE placing it down on the picture.

Use the print roller to bring the surfaces into extremely close contact.

Any air bubbles left will appear as holes in the finished transparency. It may help to roll both sides of the sandwiched materials.

Now place the sandwiched materials into a pan of vinegar. After five to ten minutes of soaking, the paper will lift away from the acetate, leaving the ink adhered to the rubber cement. Rinse in cool water and swab away the grayish haze and paper fibers with cotton soaked in vinegar. Allow transparency to dry.

To protect the inks from damage, the transparency should be sprayed with a clear plastic spray after it has dried thoroughly, then allowed to dry again. Now your transparency may be mounted in a cardboard frame or placed between pieces of slide glass and bound.

Since in storage the surface needs more protection than just a cardboard frame, you may want to use a cellophane sleeve, such as is used for photographic negatives. A cheaper method of protecting the transparency is with waterproof cellulose acetate. Cut a piece of acetate slightly larger than the transparency and place it in contact with the inked surface. Roll it into close contact, then fold over and seal the edges with masking tape. This cellulose acetate (.00088 to .0015 thickness) may be obtained from any art supply store and can be used on any

size transparency.

With this type of protection your transparencies can be stored in almost any type of file or container, singly or in groups, with no fear of damage from scratches or sticking together. This means that, once a group of transparencies has been made, it can be added to an ever-growing permanent collection of teaching aids that can be used over and over again.

The third method of transferring pictures is the cellophane tape method. This is simply placing a strip of sticky cellophane tape across the picture (avoiding wrinkles), rubbing the tape and picture into close contact with either your hand or a bone burnisher, and then stripping the tape away from the paper. The tape will remove the inks and some of the paper surface. The tape may then be soaked in vinegar or soapy water to remove the adhered paper and allowed to dry. It may be sprayed with clear plastic spray and, when dry, placed between pieces of slide glass. This particular method is effective for very small pictures that you may wish to use as 2 x 2 slides or a series of little pictures that you wish to use together. This may also be used for larger size pictures, if you obtain wider tape. Some of the companies manufacture special widths for industrial purposes, 4, 8, 10, and up to 20 inches wide.

6. Using a print roller, both surfaces are rolled into close contact on both sides.

7. The material is soaked in vinegar until the paper comes loose, then rinsed under cool water.

8. Cotton soaked in vinegar is used in swabbing the surface to remove haze and paper fibers.

**N**O SUBJECT in the curricula of our schools and colleges lends itself more ideally to an intelligent application of audiovisual aids than do the foreign languages. By the same token, there is none that has paid less attention to them until very recently. The painful re-examination of teaching methods came as a result of experiences gained during World War II, when the Armed Forces had to train literally thousands in the rudiments of many languages. Thanks to a totally new approach, we are now enjoying a belated renaissance in the field of modern languages. It was greatly helped along by recent international developments and our global commitments as a whole.

Foreign languages need no sales talk. Suffice it to say that public utterances concerning the linguistic preparedness of Russia's high school graduates (not to mention those of other nations such as Canada, England, France, etc.) offer a frightening prospect in comparison to accomplishments in this country. According to the latest figures released by the U. S. Commissioner on Education, Mr. Lawrence Derthick (back from Russia with nine colleagues after a month-long tour), about 45 percent of ten-year school students are studying English, 35 percent German, and 20 percent French. It is doubtful, however, that the percentage of American high school and college students taking Russian at this time would fill a large auditorium.

There must have been a reason for such a lack of interest in foreign languages in this country. Aside from any politico-sociological considerations, the main obstacle has been poor presentation of the subject matter: "What is chiefly lacking in our classes is not the student's willingness to learn, nor the teacher's competence in the language he teaches, but rather the teacher's insight into what he is supposed to do. Willingness to learn is hard for the teacher to create and competence is long in getting, but insights can be gained in an instant by that rare thing, an open mind."<sup>1</sup> Professor Nelson Brooks goes on to enumerate some of the don'ts: "There must be no more translation from the second language into English. There must be no more wrestling with isolated sentences that do nothing but illustrate a grammatical principle. The book must no longer masquerade as the be-all and the end-all of the language course. There must be no more long soliloquies by the teacher, at the end of which one student says "oui." We must no longer teach a contemporary language as if the culture that gives it life were dead.

by **J. Michael Moore,**  
San Diego Junior College,  
San Diego, California

... "What Professor McClosky called the distrust of verbalism can be applied to foreign language instruction as well: "Studies of language development show that elementary word and number meanings arise out of sensory experience with objects and things, but later words and numbers are used in a manner which removes them from the concrete. Hence, words and numbers may become highly abstract and complex in meaning. In fact, they may be 'abstracted' to the point of being meaningless. Therein lies the disease, known as verbalism, which plagues instruction."<sup>2</sup>

Language skill should be acquired in the same manner as a child learns his first speech. It would be absurd to picture a mother consulting an English grammar before teaching her two year old the things to say. Nature has given us the wonderful gift of imitation by which we learn how to express ourselves.

This new key in language learning is the pioneering work of none other than the Modern Language Association of America. It consists of four logical steps, namely, *hearing, speaking, reading, and writing* the spoken language.

Based on the above principle we are now in a position to analyze which audiovisual aids can best be utilized to improve modern language instruction. However a word of warning from the pen of Professor Kandel: "Audiovisual aids can only serve to supplement, not to serve as substitutes for the teacher."<sup>3</sup> As much as audiovisual aids are prescribed as antidote for the outdated academic method, the medium of the teacher, his personal contact, is still all important. He should never be replaced by a machine, nor should he be supplanted by the textbook.

**Step 1: Hearing the Spoken Language.** As the Armed Forces found out during their instructional program at the outbreak of World War II, the most ideal aid in language teaching is the native speaker. He not only speaks but acts out what is spoken. The so-

called Army Method, as presently carried out by the Army Language School at Presidio, Monterey, centers around small groups of not more than eight students per class, taught by a native-born teacher. Six daily contact hours are required for six months to one year of total instruction depending on the respective language chosen.<sup>4</sup>

If a native speaker is not available, as in the case of the majority of our institutions, such devices as records and tapes are most helpful. Many language textbooks have by now been dubbed on tapes or are available on records. The best results, of course, are obtained in a language laboratory. According to a survey conducted by the U. S. Department of Health, Education, and Welfare, and published in April, 1958, the country has a combined total of 261 language laboratories in both secondary schools and institutions of higher learning.<sup>5</sup>

The main purpose of a language laboratory is to enable each student to work independently in his "booth," which normally is equipped with a pair of earphones and a microphone, thereby achieving a maximum "hearing-speaking" contact per class session. A console, the nerve center of the entire operation, controls each booth. It can either handle live voice or a recorded lesson, and monitor each student station. The use of individual tape recorders for checking student progress in matters of pronunciation is likewise recommended as a regular feature in the learning process.

Once the fundamentals have been well established we can subject the student to additional hearing media such as foreign broadcasts (to be taped for permanent use), or foreign movies (to be rerun at a later date to check proficiency). Furthermore, the local TV network may offer an educational foreign language feature. The foreign language club may wish to invite a foreign speaker.

**Step 2: Speaking the Language.** From the very beginning the language taught should gradually become the

# LANGUAGE

# TEACHING

language of instruction. Simple commands can be introduced from the very beginning, more words added later. Repetition of the spoken word constitutes the most important phase in language learning. It also proves to be the most rewarding one to the student. The moment foreign sounds or words assume a real meaning, language study becomes sheer fun, even to the least enthused student. Repeating a new word or phrase should never get dull as long as everybody has a chance to act it out. Here again the language laboratory offers a tremendous advantage over conventional classroom drill. But even the "dry" classroom atmosphere can be brightened by such simple devices as injecting a song (preferably at regular intervals), or by making the word drill a visual experience on colored slides or on a felt board. A third dimension can be introduced by using dioramas, and even a brief field trip outside to describe the campus scenery may do the trick.

Real life situations should be acted out in class, and more difficult dramatizations ventured for the gifted child. Outside the classroom a foreign language table in the cafeteria may stimulate interest in practicing the foreign language, and lead to discussing of food items. The Army Language School even schedules regular picnics within each language group, and takes its students once per semester to a foreign consulate, and subsequently to a genuine foreign restaurant for dinner. Such contacts with foreign consuls are invaluable, since they open the door to precious visual aids. I have also arranged for our language students to go on board foreign vessels in San Diego,<sup>6</sup> and for those who could afford it, organized a European study tour in 1957.

**Step 3: Reading the Spoken Language.** Reading a foreign language is no longer confined to reading the textbook only, which incidentally should be richly illustrated. A dull text as daily companion to the student is bound to reduce his enthusiasm for

language study considerably. Phase 3 lends itself to the widest application of visual aids ever dreamed of. Let me cite a few musts in every language classroom: foreign language travel posters, maps, a globe, foreign newspapers and magazines, clippings neatly arranged on attractive bulletin boards. (\$5 will get you *Paris Match*, the French equivalent of *Life* magazine, once every week by airmail for six months.) Further musts: flat pictures, photographs, slides and filmstrips, provided they are available with captions; exhibitions from foreign embassies such as those on loan from the French Cultural Services, New York City; richly illustrated books like the publications of the famed *Insel Verlag* (at a cost of 70 cents per copy to be obtained from Stechert, N. Y.); wall calendars of the type printed by the Swiss and German publishing houses can enrich a classroom tremendously. The list of visual aids that will stimulate reading in a foreign language is practically unlimited. Almost all of the above mentioned aids do actually more than just conveying the written message. A 2 x 2 slide or a postal card depicting a scene from abroad perform the function of a foreign ambassador. They teach us the culture and customs of distant lands. Is there a finer goal to aim at in foreign language teaching?

One project that we have found to be most helpful is providing language students with pen pals from abroad. Incoming letters bring a sense of reality to the student. He begins to realize that his studies have a purpose. Needless to say, such personal correspondence opens up entire new vistas of interest, and it often results in an exchange of superb visual material (not to forget the many exciting foreign stamps).

**Step 4: Writing the Spoken Word.** Care must be taken in writing only the spoken word, at least in beginning classes. Writing a word or phrase that has not previously been introduced is a total waste of time and bewilders

the student. The old standby, the blackboard, is still the teacher's best friend. Group work on the board is a highly recommendable feature. I disagree with the method practiced by the Army Language School in this respect, since they outlawed the use of blackboards in conjunction with language learning.

But the blackboard may also be useful for more than just dictation and composition. A quickly drawn sketch may well act as a concrete interpreter of abstract symbols, such as may come up in discussion points of grammar.

**Step 5: Introducing Grammar.** How then should the essential element of grammar be approached? It should be handled in an entirely functional and meaningful way, derived out of a given situation, or better yet explained by means of a demonstration, whenever possible. "Possessives" and the use of "prepositions," to give two examples, can and should be cleared up as well as exemplified visually by means of a demonstration drill.<sup>7</sup>

**Summary.** What can be done to improve foreign language? In short, a great deal. Research during the past decade has definitely shown that the so-called academic or philological method of teaching modern languages is outdated for elementary instruction, and should be replaced by a "new key," following a logical sequence of hearing, speaking, reading and writing the language. A meaningful implementation of this principle without the fullest utilization of audiovisual aids is unthinkable. Thanks to audiovisual aids modern technology has created language laboratories, which enable us not only to improve modern language teaching, but also to teach the language and its life giving culture more effectively than ever before in history. At a time when the interests of the U. S. are as far flung internationally as today, this fact alone should present a great challenge to all of us who are engaged in administering, teaching, or learning foreign languages.

Figure 1: a linear programming problem, presented geometrically on the Roto-Slap Board.

Figure 2: this plant-layout demonstration reveals its three-dimensional assets.

AS EVERY experienced teacher knows, the third dimension in the classroom demonstration is difficult to handle. Drawn on the blackboard, three-dimensional models are slow to develop and require more skill than the average teacher is capable of. The lines on the blackboard tend to cause confusion rather than present the lucid concepts intended. Models used on a horizontal surface are impossible for the students to see, especially where large groups are being taught.

An answer to these problems is the Roto-Slap Board which combines the best features of the two-dimensional visual aids and has in addition the important feature that three dimensional displays can be readily made. This device also permits a display to be rotated so that any angle can be clearly presented to a group.

#### What Is the Roto-Slap Board?

The Roto-Slap Board consists of a rotating inclined table (Figure 1) which has just enough slope to display models, specimens, or whatever, to the most remotely seated member of a class. The table surface can be used for many different applications depending upon whether the surface is flanneled, flocked, left plain or covered with a piece of sheet iron to attract magnets. Figure 1 is a typical demonstration

of a geometry problem—more specifically the geometric representation of a Linear Programming problem. The second figure is a plant-layout demonstration which is usually an extremely difficult one for a classroom presentation. A number of small figures placed on a plastic layout grid with double surface tape is in turn placed on the Roto-Slap Board.

Figure 3 shows a part being displayed for a lecture in mechanical drawing. The part to be discussed has been placed in a plastic box inscribed with the projection of each side. The box in turn sits on the Roto-Slap Board. This arrangement makes it possible for a large class to see the model as well as allowing it to rotate for various possible views.

These illustrations are just a few which show the usefulness of the Roto-Slap Board. Other examples can be found in chemistry, physiology and other areas of study where three dimensional models better illustrate the subject.

#### Construction of the Roto-Slap Board

The Roto-Slap Board consists of two basic parts, the easel and the table. The construction of these is shown in Figure 4.

The easel is made of two  $\frac{1}{8}$  inch masonite legs cut like the "30 degree

triangle" used in mechanical drawing. The long edges of the triangles form the base and the top corners are rounded as illustrated. These two legs of the easel are held together by the bearing block and are attached by machine screws with wing nuts for easy assembly.

The Slap-Board itself is made from a twenty-four inch square piece of tempered masonite  $\frac{1}{8}$  thick cut to form an octagonal table surface. This in turn is backed up by an eight inch circular piece of hard-wood one inch thick, which is glued to the masonite.

The shaft upon which the table rotates is simply a  $\frac{1}{2}$  inch diameter bolt with the head removed. The circular backing piece is partially recessed so that when it is clamped between two lock nuts they will not protrude above the surface of the table. The bolt turns in a hole drilled in the center of the easel bearing block. Before assembly the center of the bolt is drilled out for half its length in order to hold a piece of  $\frac{1}{8}$  inch drill rod which can act as a "Z" axis in a geometry problem.

The surface of the Slap-Board can be given several finishes, depending upon the use for which it is intended. If scotch tape is to be used on the surface, the table may be left unfinished or given a coat of clear or col-

# Roto-Slap Boards for Classroom 3-D

Figure 3: a model is displayed for a mechanical drawing lecture.

ored lacquer. A flannel covering will be suitable when models backed with heavy sandpaper are going to be used, similar to conventional slap-boards. For some purposes the best surface is made of commercial flocking materials, which are readily obtained and can be applied with very little skill. This is an ideal surface for many applications.

For heavy models it might be desirable to embed small magnets in the surface of their bases. For this application it will be necessary to cover the Slap-Board with a thin sheet of iron which can be obtained in any tin shop. The sheet iron can be easily removed if the edge of the iron is bent so that it will just fit over the edge of the masonite. This permits a choice of more than one surface to work with.

If you are weary of trying to get your point across by many blackboard drawings or by obscure models which must remain flat on a desk, then try making for yourself this handy visual aid, the Roto-Slap Board.

*Editor's note: The term "Roto-Slap," doubtless unfamiliar to many of our readers, was coined by Dr. Greene. He writes that he is used to referring to a flannel board as a "slap" board, so that the above term is a logical modification.*

Figure 4: construction of easel and table.

# Film

i

t

by *Alexander H. Howard, Jr.*, Associate Professor of Education,  
Central Washington College of Education, Ellensburg

This article first appeared in **WASHINGTON EDUCATION**,  
March, 1958, under the column "Audio-Visual Aids and Ideas." The  
latter is sponsored by the Washington division of **DAVI**.

**"FILM FIT"** could be a label for an idea that is of concern to all those having to do with educational motion pictures. Of course, it could designate the state of a teacher whose film did not arrive on time, or, to a principal who had to pay a film damage bill, it could have to do with the way the projector was threaded. But it *could* mean how a film "fit into" the instructional program. To say a film is "not fitting" may be putting it in non-educational vernacular, but it certainly does put the point plainly!

Putting the point more precisely, we should mean that a film ought to fit particular purposes for a particular group of pupils. And to be even more precise, we should want a film to fit specific *learning* purposes—to contribute to the development of specific understandings, specific skills, specific attitudes. But how often films are used because they fit a general purpose—they fit the schedule, they fit the grade level, they fit our own personal interests! And even when we know exactly what is needed in a film for our program we often find it difficult to find a film that *fits*.

Producers try to help us achieve better "film fit," both in producing films and in promoting their use. In the first place, they do a lot of analysis of curricular needs before they decide to make a film. Then they take pains to make a film to meet one of those needs. And when they promote the use of the film they suggest where it can fit your program. This is done personally, sometimes, by sales representatives who visit schools, but more often it is done through printed circulars. In both cases producers are careful to let the responsibility for decision on "film fit" lie with the teacher, who is theoretically best able to decide.

Film libraries try, too, to help us achieve "film fit." They base the selection of films for their collection on the

apparent instructional needs, and designate "fit" in their catalogs and special listings by means of grade level indicators and subject indexing. But they, too, do not want to be presumptive—they feel the teacher should make the "film fit" decision.

Audiovisual coordinators try, also, to help us get films that fit. They keep us informed about available films, talk with us about our needs, write us memos and send us notes, put catalogs in our hands, set up preview sessions. But they, too, seem to feel that the ultimate "film fit" decision belongs to the classroom teacher.

Are you taking full advantage of all this effort toward better film fit? Do you watch for points in your program where a film might do the job best? Do you seek the counsel of your audiovisual coordinator? Do you check film catalogs, read film reviews, preview films? Do you spell out your learning purposes specifically, and seek films that fit?

One aid to better film fit that might be used more often by classroom teachers is the teachers' guide. Most of the major educational film producers publish such guides, and distribute them free or at nominal cost. Typically, there is a guide for each separate film, and it contains several kinds of useful information. A guide will tell who collaborated in making the film (this helps in deciding about the authenticity factor in film fit). It suggests a grade level (this helps decide the fitness to readiness level). It names the curricular area (this makes the suitability to subject decision easier). It states a film purpose (this helps you match the film to your own specific purposes). It summarizes the content of the film, often printing the complete narration script and selected pictures from the sequence (this helps you check carefully for details). And it may suggest ways to use the film in the classroom (which can help you fit the film effectively into your classwork).

For example, Young America Films has released a film (one of a series) entitled "Walk Better" (nine minutes, sound, black-and-white). The guide for it says: for use in grades three to eight; purposes: (1) to show students the correct habits of walking, (2) to

help students understand that correct habits of walking are essential to good posture and good health, (3) to help children build healthier, sturdier bodies; content: analyzes walking movements in slow motion, discusses correct and incorrect habits (and so on, including the complete narration); advisers: physical education professors Drury and Bridgman of San Francisco State College. All this is elaborated more, of course, in a concise, two-page brochure.

Another example: EBFilms released a second edition of "Sound Waves and Their Sources" (eleven minutes, sound, black-and-white). The guide says: use of film: for high school and college courses in physics, general science, music, speech, radio and physiology (would you have guessed these applications from the title alone, or from a short catalog description?); story of the film: (here skimming through the comprehensive summary we catch "high school orchestra," "three different sources of sound," "how sounds are produced," "oscillograph," "loudness, pitch and quality," "overtones," "harmonics," "human vocal mechanism," and so on); suggestions for using the film: (includes guide questions for before and discussion questions for after the showing).

And another example: Coronet Films has a film entitled "Seeds Grow into Plants" (one reel, sound, color or black-and-white). The guide includes: recommended use: grades one to three; film purpose: to introduce basic concepts of plant growth, showing seed dispersal, the plant embryo, and the growth of a plant from a seed; behind the scenes: (more of why the film was made, its background, how the film tells the story); film summary: (the style of the summary conforms to that of the film narration); educational collaborator: Helen Challand, science specialist at the National College of Education, Evanston, Illinois; related questions and related activities (named and described). A very helpful aid to deciding whether this film fits.

Fitting films more closely to learning needs is the responsibility of the classroom teacher, and by taking advantage of the available help, especially by using teachers' guides, a teacher can more easily find films that fit.

## conference seeks filmstrip standards

A national conference to consider an official standard for filmstrip dimensions and markings was held in Chicago, October 2. Sponsored by the National Audio-Visual Association, the all-day meeting was attended by more than 30 leading authorities in the production, distribution and use of filmstrips in education, church and industry.

At least four different frame dimensions are now in use, none of them conforming to the American Standards Association. It was agreed that a uniform standard was desirable, but exact dimensions were left to further study and recommendation by a technical committee headed by Clifford Carlson of the DuKane Corporation. It was decided that the printer aperture rather than that of the projector must outline the frame, and that a black surround is desirable.

It was recommended that the leader should be not less than ten frames long, and should start with a straight cut (a curved end cut is acceptable, but diagonal cut leads are undesirable). An initial "locus" frame is to be standard; this may contain advice as to when to start the record, how to project the strip, etc. One blank frame is recommended ahead of a main title to give a smoother start.

Following the last picture frame, trailer length is to be not less than equivalent to the inside circumference of the can in which the film is to be shipped, as protection against scratching. Endorsement was given the Frank Holmes' invention, used by Churchcraft, of a trailer frame reading: "To rewind, start here and wind film away from you."

After considerable discussion of ways to prevent right-left threading error, this problem, admittedly serious, was referred to the committee for further study. One suggestion was for a green or opaque stripe outside the right-hand sprocket holes.

Many of the points of criticism were those raised by William S. Hockman at the Penn State religious AV workshop and in his articles in *Educational Screen*. Alleged difficulty of preview was considered sufficiently met by existing manual viewers. Tendency to scratch could be avoided by better de-burring of cans, lining them with tape, or by using polyethylene containers. "Springiness" was considered in terms of film base characteristics and laboratory processing; the committee was asked to survey experiences and look into the possibilities of using

"Mylar" and kindred film stock for filmstrips. Tight winding, especially when aggravated by the use of rubber bands, was condemned as the major factor contributing to excessive "springing."

The charge that sticking in the gate is caused by excessive heat at the aperture was disputed on the grounds that tests showed that no existing projector exceeds the test-based standards of the A.S.A.

The last item discussed was whether a change to 16mm frame size for use

with small audiences (five to eight people) would drop the cost of filmstrip projection to the point where single denominations would order as many as 20,000 low-cost 16mm filmstrip projectors at a time. Engineers stated that for comparable results a new 16mm projector would cost more to build than present machines. The difference in raw stock and printing cost was shown to be a relatively negligible part of the current filmstrip price. Baptist and Methodist representatives, however, indicated that their interest in the narrower medium continues. Further action will depend on the work of the two committees.

— Wm. F. Kruse

Successful A-V planning demands equipment that will take years of hard, consistent use! That's why you'll want to select a Vidiomaster Screen by Da-Lite. 50 years of important engineering improvements are your assurance of quality construction features in every Da-Lite screen. Choose from mat white or "White Magic" glass beaded . . . or the entirely new Wonderlite® Lenticular surface which gives superior performance even in undarkened rooms.

WRITE for name of Franchised Da-Lite A-V dealer in your area who will gladly demonstrate the full line of Vidiomaster Screens!

# Useful Filmstrips

By IRENE F. CYPHER

Associate Professor of Education  
Dept. of Communication Arts  
New York University

Someone once asked us if filmstrips were not best suited for use in the elementary grades, and at the time we were slightly shocked at such a question. Unfortunately, the same question has been asked a number of times since, so apparently it is timely to call attention to the fact that filmstrips are equally effective with all grade levels —if, as with any medium, the material is well prepared and presented in a manner suitable to the particular age or group needs. Certainly a glance at the titles included in this month's column should be clear indication that filmstrips are available in practically every subject area and for all grade interests. Of course both producer and user have a responsibility. This column is basically intended for potential users, so we suggest that you take a few minutes to examine the way you have been using filmstrips. How would you score your utilization techniques? Think it over.

## GEOGRAPHY SERIES

(8 sets of 4 filmstrips each, color; Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Illinois; \$19.50 per set.) It might be well to remember that geography is important to both historians and to physical scientists. Success in many phases of political and scientific work depends upon an understanding of land, people, and resources in different parts of the world. The sets in this series include material on The Americas, the South, the Northeastern U. S., South America, Western and Northern Europe, Eastern and Southeastern Asia, Central and Southern Europe, and Africa. In each instance emphasis is on how people live and work, natural resources and what the areas contribute to world economy. There is considerable map work study, and content is always correlated to standard curriculum units. Designed for use in grades five through seven, and particularly good for social studies and geography.

## ARAB UNITY AND THE EAST-WEST STRUGGLE

(Single strip, black and white; produced by Current Affairs Films, 527 Madison Ave., New York 22, N. Y. and available by sponsorship of a local newspaper.) Every newspaper and magazine today carries at least one item dealing with events in the Arab countries. We need to know more about this area, and the filmstrip gives us some very timely information. Facts included relate to what is meant by the word "Arab," Arab nationalism, oil resources and the Suez Canal, how the new Arab states were set up. This type of filmstrip is good resource material for social studies classes, and is planned for work in the junior and senior high school units.

## JUNIOR TRAVEL SERIES

(5 strips, color; Long Filmstrip Service, 7505 Fairmount Ave., El Cerrito, California.) There is a never-failing fascination in anything connected with travel. Boys and girls are always interested in the details of "trips," and this series takes us on trips by bus, airplane, train, ship and auto. The stories are shown from the young person's point of view, and the questions answered are those that young travelers all ask—what makes the airplane go, how do they know where to steer the ship, what is a bus trip like. These are good for preparation for travel itself, and also for an understanding and appreciation of the importance of various means of transportation. Good for elementary classes.

## THE BRIDGE UNESCO BUILDS

(Single strip, color; available from UNESCO Publications Center, 801 Third Ave., New York 22, N. Y.; \$4.75 with script; \$7.50 with record narration.) If people are actually to work together for world harmony it is especially important to understand the work of UNESCO. This strip includes

an account of what UNESCO is, how it is organized and what its program of activities is designed to include. There are no captions, and the user is free to comment with the aid of a reading script, or to use a record-narration which takes thirty minutes. The strip is long, 101 frames, and will be most effective for classroom purposes if used a section at a time. The possible range of use is wide, and both strip and record are suitable for school, club or community groups.

## AUSTRALIA, INDONESIA AND THE PHILIPPINES

(7 strips, color; produced by Jan Handy Organization, 2821 E. Grand Blvd., Detroit 2, Michigan; \$36.50 set, \$5.75 single strip.) We know all too little about our neighbors "down under," yet we have much in common with the peoples of Australia, Indonesia and the Philippines. In this series the emphasis is on how the people in this area live, work, and what they contribute to world affairs. Scenes include something of both ranch and city life in Australia; products, ceremonies, village and city life in Indonesia; and the ways in which the people of the Philippines have worked to build up the economic structure of that country. The three strips dealing with Australia give a good picture of life in the sheep ranching districts; they also indicate something of the importance of uranium and other ores. The material is well suited for social studies units in both upper elementary and junior and senior high school classes.

**SUDDENLY**  
*they respond...*

when you teach with the  
**AO Spencer Opaque Projector**

## THE APPRECIATION OF PICTURES

(12 strips, color; produced by Visual Productions, Ltd., London, available from Stanley Bowmar, Valhalla, N. Y.; \$6 single strips, \$55 dollars set of 12.) In this series we are provided with material selected to help in the presentation of general principles governing the appreciation of pictorial art. Illustrations have been chosen from the works of artists of Western Europe, and very complete lecture notes give detailed information about the artists' mediums, language, content of art, religious art and realism, and modernism. The color quality is excellent and the series is really the equivalent of a field tour through many of the most famous of the museums of Europe. Material such as this can be used from the upper elementary grades through high school and in college classes.

**SO EASY** Teaching and learning are much easier with this unique projector. You just flip a switch to project a big, bright picture of your teaching materials exactly the way you want to show them...subjects become dramatically alive...and your class responds as a unit. You teach more effectively because you show what you mean. Learning is more fun this way.

**SHARPEST IMAGE** Coated objective optics cut internal glare and reflection. With the exclusive all-glass reflecting system, this guarantees a sharp, crisp image on the entire screen...edge to edge...corner to corner.

**1,000 WATT INTENSITY** High-powered illumination shows a clear, detailed picture in a semi-darkened room, or even a normally lighted room with shades up. The entire system is cooled by a quiet, motor driven fan... a constant stream of air over projected copy keeps it safe.

**STURDY, PORTABLE** The projector is built of rugged, light-weight, lifetime aluminum. Carry it anywhere. Precision mechanical fitting throughout assures permanent optical alignment.

## EDUCATION IN AMERICA: TWENTIETH CENTURY DEVELOPMENTS

(Coronet Films, Sales Department, Coronet Building, Chicago 1, Illinois) 16 minutes, 16mm, sound, color or black and white, 1958. \$150.00 or \$82.50. Teacher's guide available.

### Description

Dramatic re-enactments, excerpts from documentary films, and views of original photographs are woven into this survey of changing educational philosophies emerging from twentieth century American culture.

A picture of a white frame schoolhouse, pupils converging from the "outside facilities," the playground, and even "up the road apiece" in response to the authoritative clang of a bell rung by a young teacher is contrasted with one of rows of closely set houses, belching locomotives, and noisy factories to draw attention to the fact that, in 1900, the prevalent instructional methods were unable to cope with developing economic and cultural trends. Already, in up-to-date, modern communities, a horse-drawn "school bus" had been introduced to transport children to "consolidated" schools.

As the "school bus" passes on down the street, a series of dramatized scenes briefly reviews some innovations of this "progressive education" including *object lessons*, illustrated by children examining a real bird's nest; *kindergartens*, where children build with blocks and color with crayons; *curricular integration*, depicted by several boys dressed in paper costumes learning art, history, literature, and language while re-enacting a scene from Roman life.

Such a transition from the traditional "subject-centered" curriculum to the new "child-centered" curriculum gave rise to teacher-training institutions such as John Dewey's Laboratory School at the University of Chicago, in which he developed the "learn by

Scene from Coronet's Film Education in America: Twentieth Century Developments.

doing" theory. Other facets of this transition are seen simultaneously emerging when the camera focuses upon test after test derived by such men as Benet to establish norms of behavioral development, and Thorndike to establish norms of achievement.

Scenes of classes in session reveal new methods of teaching and the broadening of the curriculum to include vocational, special, and technical courses such as astronomy, chemistry, animal husbandry, home economics, and physical education.

The change in educational progress patterns is traced through the establishment of junior high schools, the differentiation between "college" and "university," and the stabilizing of instruction by recently formed state and county boards of education.

Federal aid for school lunch rooms, new or improved buildings, and an influx of students attending colleges and universities on the "GI bill" are identified as effects of the great depression and World War II. Recent Supreme Court decisions regarding state loyalty oaths and racial integration lead to a view of today's schools with their needs for better teachers, better classrooms, better instructional tools, and stronger community support. The film ends with a backward glimpse at "yesterday's schools" showing that, as the community reflects the schools, so do the schools reflect the community and meet the demands of each successive era.

### Appraisal

This is the culmination of a series of three films produced to show how changes in American public education

have emerged largely in response to social and economic needs. The first, *Education in America: The Seventeenth and Eighteenth Centuries*, reviews the prevailing education as an expression of a religious culture in New England and an aristocratic culture in the South. The second, *Education in America: The Nineteenth Century*, recounts the effects of the Westward Movement in the expression of education for citizenship. This, the third, *Education in America: Twentieth Century Developments*, relates the effects of industrialization, urbanization, and easier transportation on education. Taken *per se*, the film more accurately presents a survey of recent educational developments. It is, however, one of the first attempts to recount such a survey and the evaluators feel it has value in teacher education classes and in college classes in educational history, philosophy, and curriculum foundation. Some use may also be found in U. S. history and sociology classes. P.T.A. groups, too, may find it informative. The film is logically organized, interestingly linked together, and holds attention, so that there should be good retention of highlights presented. As the film is a survey, the concept of "progressive education" is not enlarged upon and an instructor may want to utilize it as a springboard to more detailed investigation. The series is one that all persons connected with teacher education should know about and use.

—Jean L. Holt

## TREASURES OF THE EARTH

(Churchill-Wexler Film Productions, 801 North Seward Street, Los Angeles 38, California) 12 minutes, 16mm, sound, black and white, color, 1958. \$50 or \$100.

### Description

Animation is the photographic technique used almost entirely to explain and illustrate how the minerals of the earth are formed and recovered for human use. Narration, at times in blank verse style, explains the pictorial presentation.

Narration points out that one mountain may contain enough iron to build ten ocean liners, enough gold and iron

to pay for them, and enough uranium to make them go. It would be extremely difficult, however, to extract these minerals due to their wide dispersal in the earth's crust. Animated drawings demonstrate how this crust on the earth has been in a state of flux for the past four-and-one-half billion years. The formation of mountains, effect of weather on land, pressure of sediment resulting in rock, and rush of molten rock as it flows into crevices and bursts forth as a volcano are explained diagrammatically.

Such minerals as copper, iron, tin, coal, oil, gold, and salt are visually traced as they slowly develop in the earth's outer layer. The continual change of the earth's surface while these minerals change their form is emphasized by the narrator and this outer covering of the earth is compared to the fuzz on a peach which barely covers the riches inside.

Geological terms, such as *faults*, *magma*, *deposits*, and *veins*, are clarified both in the narration and the visuals.

*Treasures of the Earth* concludes with the admonition that if the earth's resources are conserved and used wisely the result will be additional untold wealth.

#### Appraisal

One of a series of films correlated with the text, *Heath Elementary Science* by Herman and Nina Schneider, *Treasures of the Earth* contains an abundance of material presented with a fresh approach. It should serve as a valuable source of information for intermediate and junior high teachers of general science classes. The animation sequences clarify the processes of what happens to certain minerals as they are forming in the earth's crust. The careful definition of specialized terms in the narration provides a deeper understanding of the processes involved. Although the film deals primarily with the formation of minerals, it also may prove useful in encouraging investigation of such areas as conservation of natural resources, mining processes, and industrial use. Unique attention-getting devices are especially effective in capturing the attention of the viewer and the simple animation technique successfully holds it.

—O. E. Bismeyer, Jr.

#### MIMEOGRAPHING TECHNIQUES

Phase Films Sonoma, California

young secretary demonstrating the procedures involved in choosing, cutting, and coloring stencils and the effective operation of the manual and electric mimeograph machines.

This narrated demonstration begins by discussing the problems of duplication needed for such publications as announcements, advertising, agendas, and workbooks. It points out that the typewriter can duplicate a few copies by using carbons, that the liquid duplicator can put out approximately one hundred good copies, but that the mimeograph machine produces up to several thousand copies.

Different types of stencils including printed, photo-etched, and inset stencils as well as different weights and colors of papers are identified and their particular uses indicated. Hand lettering and drawing techniques employed with the mimeoscope are illustrated.

A number of tips are given and demonstrated for use when preparing the stencil for typing. The keys of the typewriter must be cleaned and the ribbon control moved to the stencil position for clear letter impressions. A cushion sheet is placed in the stencil before insertion in the typewriter. Care should be taken to see that there are no wrinkles resulting when the stencil is put in the typewriter. A slower, heavier, but even typing is recommended. For errors, application of correction fluid and light retyping is advised.

The stencil is then shown being carefully removed from the typewriter and placed on the mimeoscope for special lettering, tracing, drawing, and

shading with the styli provided for these special effects.

Steps in the operation of the mimeograph machine are demonstrated with special attention given to placing paper in the feed tray, inking the pad, placing in the stencil, running examination copies followed by necessary raising or lowering, lateral or diagonal adjustment, and the removal of undesirable marks by the use of correction fluid. A counter can be set for the number of copies desired.

How stencils may be saved and identified is shown by running a manila folder through the machine to print the copy on the outside cover, and then placing the used stencil inside the folder. A cover is placed over the ink pad to keep it from drying out.

A demonstration of color techniques is given showing how one color or more at a time can be run through the machine. A clean pad is placed over the blackened pad and colored ink placed on the areas that will give color to parts where it is desired.

The film closes with a review of the basic points.

### Appraisal

*Mimeographing Techniques* will serve as a good introductory film preceding any discussion or demonstration of the operation of the mimeograph machine. The film is useful from junior high to college and in special adult-training programs. The photography and sound are good. The demonstrated technique of running several colors at one time should suggest unlimited applications. Perhaps the salient feature of this production is that it is at present one of the few films devoted to the skill of mimeographing and hence fills a definite need for persons using this equipment.

—J. Robert McAdam

### THE CHRISTMAS DEER

(Grover-Jennings Productions, Inc., 4516 North Hermitage, Chicago 40, Illinois) 14 minutes, 16mm, sound, color (\$145, discounts on quantity purchase). Teacher's guide available.

### Description

Based on a fragment of a legend retold as a modern allegory, with a French folk carol melody played on a lute and a recorder as background, this film tells the story of an old woodcutter, Nicholas, and his Christmas time experiences which center around a small boy and a deer.

Opening on a lonesome, old, grey-bearded woodcutter in his isolated workshop-cabin in a lonely woods, the film explains that the woodcutter had led a very productive, happy life as

1245 Chicago Ave., Evanston, Ill. • Ph: DA 8-7070

long as his grandson lived. The death of the boy a number of years ago cast a gloom over him which he could not dispel. The camera, in following Nicholas' (or Nick as he was often called) slow, aimless movements, records the emptiness of his life as he views among his woodcarvings the nativity scene he had completed except for the Baby-Jesus figure, before his grandson's death.

Listlessly leaving the cabin, Nicholas is heartened by the sight of something living—a deer, which always seems not too far away. Following the footprints of the deer, he comes upon a nine or ten-year-old boy who also was following it but had finally given up. Nicholas takes the boy back to the road, and, hating to see him go, shows him a whistle he had carved. After playing a Christmas tune for the boy, he shows him how to carve a whistle.

The boy leaves; Nick goes back into his cabin. Spurred by the contact with the youngster, he tries to complete the Baby-Jesus figure, but finds that his fingers are too stiff.

The day before Christmas, the boy returns to the cabin to tell Nick about his experiences with the whistle he carved. Flashback scenes show this lad kneeling before a nativity scene in front of a church and adding his whistle to the Baby-Jesus' gifts. He is stopped while leaving it there by a voice that suggests it would be better to give it to a poor boy. This he does and feels great joy.

After the boy's departure, Nicholas, very moved by the boy's story, decides to give his woodcarving to poor children. As he dons his heavy red coat, puts his woodcarvings in a pack on his shoulder and ventures forth to deliver them, he again sees the deer. It is little wonder that many stories sprang up about him, including a version that he was in a sleigh drawn by one or more reindeer.

Even though Nick returns home empty-handed, the cabin no longer seems empty, nor does life now seem empty to him. He kneels to pray that he can carve gifts for more children before next Christmas. When he opens his eyes, he sees the figure of Baby-Jesus in his nativity scene and realizes that once again he can carve!

### Appraisal

People of all ages should enjoy the quiet beauty, the allegorical charm, the quaint music, the touching drama and the superb camera work in this Christmastime film. Combining the mystical with the real, *The Christmas Deer* has appeal for groups of all ages. Its underlying theme—the joy of giving—is beautifully and convincingly developed. The symbolical deer as

## MUTED ANGUISH ABOUT CLASSROOM FILM QUALITY

Recently we had the searing experience of having our Life Work revealed to four children on as many occasions. We've never felt ashamed of making educational films before but as we watched the ill concealed pain on each face we wondered if perhaps we should go underground. One teenager said witheringly "Do you have to look at them too?"

Man's spirit falters before the scorn of the teenager. By getting each one into the projection room we were able to restore our status.

Unhappily there is reason for our critics' pained reactions. An immoderate number of classroom films are just plain dreary. Which is not to say that they may not be loaded with values and useful in the hands of a wise teacher. How often have we all heard an apologist say that the film isn't very good but, my, the values that a good teacher can bring out of it. Now, if that isn't ridiculous! A wise teacher could conjure a wealth of values out of McGuffey's Reader. But why should one start with a handicap?

Recently we heard an A-V director theorize (*sotto voce*) that too often dreariness befalls the films made under the guidance of the Expert. The person with the name gets that way because he has written books, the argument goes. Books are made of words. Ergo, it is words that the Expert contributes to the film . . . lots of words and no pictures.

Even if the theory has merit, it can be only part of the reason for dreariness in educational films. Whether or not he abdicates to an advisor, the blame rests on the film maker. Of course, not everyone making films has the talent to make good ones, but even the many classroom film producers with real ability too often grind out pot boilers to fill some chink in the curriculum.

This isn't just a lament. There is a solution. When enough A-V people over the country raise their standards and reject the films that make children groan, producers will exert themselves to provide films that delight as well as teach. And not until.

If you would like to see some remarkably undreary Churchill-Wexler films, or if any victims of the teenager's scorn would like some sympathy, drop us a card.

## ELECTRICITY ALL ABOUT US

(Exploring Science)

(Coronet Instructional Films, 65 East South Water Street, Chicago, Illinois) 11 minutes, 16mm, sound, black and white or color, 1958. \$55 or \$100. Teacher's guide available.

### Description

The film presents Jean, a fifth grader, as she observes the way in which electricity is used at home. Through several simple experiments she discovers some of the principles of electricity.

The beginning sequence shows Jean at home reading, when a storm causes the electric current in her home to go off. Her mother shows her that the electrical appliances in her home will not work. Lightning had struck a power line and the useful electric current was not available. Lightning is a form of static electricity, but man has not been able to harness it to make it useful.

In school the next day, Jean and her classmates find that static electricity can be collected on a balloon. When enough charges are collected on the balloon it is able to attract and pick up light objects. Robert brings his cat to school and the students can hear the crackle of static electricity when they stroke the cat. Jean finds that static electricity is usually harmless.

When Jean comes home from school that day she is interested in finding out more about electricity. Her dad helps her with some simple, safe experiments. Jean hooks up a flashlight bulb to a dry-cell battery with wire to form a complete circuit which causes the bulb to light. In the next experiment Jean uses a door bell, switch, wire, and a dry-cell battery. She discovers the difference between good conductors and non-conductors. Insulation is needed around wires to prevent a short circuit.

Jean observes that an electric light bulb not only gives off light but heat as well. Electricity is also used to produce heat in the iron, toaster, and electric stove. In her experiments Jean finds that more electricity is required to light a fluorescent lamp than can be supplied by the dry cell battery. This electricity comes through wires from a power station. The film takes the viewer to power stations which use

coal, water, and atomic energy to turn the turbines and generators which produce electricity.

After a summary of the main points in the film, the narrator asks, "Wouldn't you like to learn more about the electricity that is all about us?"

### Appraisal

*Electricity All About Us* can be well integrated with other instructional materials in intermediate grade science units on electricity for the purposes of (1) showing the uses of electricity in daily living, (2) explaining the principles of electricity, and (3) suggesting pupil experiments for both school and home. The evaluating committee feels that the film will be very valuable as a motivating device, as well as an informational film. Teachers should have materials on hand for student experiments after the film is shown. It presents simple ones which can be done in the classroom with a minimum amount of equipment. The many worthwhile activities suggested include a field trip and a display of the path of electricity from the power house to the community. Many new words presented by the film will be interesting in all types of language activities.

# Sound Advice

about audio materials  
and equipment

Ten years after the introduction of the longer playing microgrooved record which made possible long, uninterrupted sound sequences of both music and voice, the industry has brought forth a new tri-dimensional sound on discs. Stereophonic recordings are destined to become more and more important in home and school as appropriate equipment is supplied.

Appropriate equipment, in effect, means dual equipment because stereophony demands separation of sound through separate but parallel amplification and reproduction systems. In appearance, to the casual observer, the stereophonic disc will look no different than the "33's" and "45's" we have been seeing for the past decade. But in terms of sound—of hearing—the differences will be as striking as the differences between the wedding cake and the bride's first home-made biscuits!

Stereophony is rapidly proving itself in the field of music. The stereophonic recording gives depth and breadth to the reproduced sound. The orchestra sounds like an orchestra on a stage. The symphony has both mass and movement to the listener. The smaller concert orchestra is similarly given added dimension and the music reproduced takes on additional beauty. There has been some question about still smaller, more intimate, instrumental groups such as string quartets, and chamber music groups. Will the soloist with an orchestra forever be relegated to the left side of the stage—or the right—and never again be "front and center"? These are questions awaiting answer. We shall "wait and hear".

The immediate applications of stereophony to the music appreciation classes are obvious—and with the progress of time, science, and instruction improvement, we believe that most or all music classrooms will be thus equipped. Certainly, in a very short time, a classroom not so equipped will be considered inadequate for this

study. But the production of recordings must be enlarged and must meet the needs of instruction. It is safe to assume that for the immediate present and for the foreseeable future major classical releases of leading producers will be released both stereophonically and monaurally. We do not anticipate departure from this policy for some time, but stereophony must be supported economically by schools and homes. Public acceptance can only be measured by purchase. Stereophony is already recognized as an "artistic success" and we do not believe it will be a "box-office failure"; therefore we are advising schoolmen to plan for stereophony at least in music instruction.

## Applications of Stereo

We have not heard pure voice reproduction of stereophonic sound. We are not sure that it will add significantly to straight readings of either poetry or prose. We think this most applicable to the solo reader and probably applicable, too, to cast dramatic portrayal, even when action and movement must be portrayed. We are interested in studying a recent RCA Victor announcement covering a month's records involving a variety of music. In opera "Madama Butterfly" is offered monaurally and stereophonically but "La Gioconda" and "Cavalleria Rusticana" are offered only monaurally. All three were recorded in Italy, and all three offer the complete opera so we do not know why only "Madama Butterfly" is offered in both forms. Perhaps this is a test of public reaction.

But all of the orchestral performances are offered in both forms. There is a range and variety of music involved including Dvorak: "New World Symphony," Berlioz: "Harold in Italy," Granados, Falla, and Albeniz: "Spain," "On Stage With Robert Shaw," Saint-Saens: "Concerto No. 2, G-Minor," Frank: "Symphonic Variations," "Good Music To Have Fun With,"

"Marches in Hi-Fi," Richard Rodgers: "Victory At Sea, Volume II," and Beethoven: "Symphony No. 3 in E-Flat, Opus 55 ('Eroica')."

Certainly schools moving into stereo right now can find the foundation of a good collection right here.

Perhaps stereo would have helped the "Hamlet" (Word, W-6002-3) offered by Word Records (Waco, Texas) which we mentioned last month. We found this Baylor Theater production of the play to be confusing. The producers describe it as "unorthodox" and "different" as well as "controversial"—and it is. They add further that the album should "infuriate Elizabethan purists"—and it will. It is of interest to some drama students in college and to mature listeners because it surely represents a most unusual presentation and interpretation of the play. There are too many moments, however, when the listener is left only with the impression that the director (Paul Baker) had as a major objective to have as many performers as possible on stage. We endorse the concept of variety of voices to portray variety of character delineation but we do not believe that this example is the best that could have been produced. If our stated preferences for our Shakespeare straight labels us as an

perfect  
for  
instruction and recreation

"Elizabethan purist" we modestly accept the accolade. We believe this to have been essentially a visual production of "Hamlet" which, committed to sound alone, lost the fire and brilliance for which Mr. Baker is known and applauded. We hope someday to see the twenty-minute sound motion picture of this production filmed at the Baylor Theater.

"The Declaration of Independence" and "Lincoln's Gettysburg Address" back each other on Enrichment Records' (New York) new release intended for upper elementary and junior high school classes in American History. Both titles follow the same format—the summary of events and public mood through the presentation of songs then popular. Selected portions of the Declaration of Independence are read on one side of the record and the famous Lincoln address is presented on the other. Each recording successfully mirrors the feeling of the people of the time toward particular national problems and can be used effectively in instruction either to motivate interest or to present an overall summary of the time.

Junior High School teachers of English will welcome "Many Voices—II" (Harcourt, Brace and Company, New York) as an important adjunct to instruction. Although specifically designed to implement the Olympic Edition of the text, "Adventures in Reading," the instructional applications of the recording cannot be considered as limited to classes using that particular volume.

Included are five units of poetry and one of prose. For the latter, Thurber's "The Night The Bed Fell" is read with imagination and sympathetic expression. In the poetry sections is

material for listening for fun (Ogden Nash for example), some favorite American poems (Holmes, Whitman, Longfellow and others), a section devoted to suspense and danger as interpreted poetically by Tennyson and Scott, nature as viewed by Wordsworth, Shelley and others and, finally, Longfellow's "Paul Revere's Ride." Certainly this is a recording which "belongs"—belongs in many schools and both school and public libraries. For most certainly listening to it can be fun, and should be.

Whether or not you use "Adventures in Reading" published by Harcourt, Brace (New York), their recording "Many Voices—III" will be helpful in many classes, but particularly in eighth grade English. Under the heading of "Magic Words" they offer Masefield's "Sea Fever," McLeod's "Lone Dog," De la Mare's "Silver," Burns' "My Heart's in the Highlands," Stephens' "The Goat Paths," and Colum's "An Old Woman of the Roads" all read by Padraic Colum. "Poems for Reading Aloud" include "Southern Ships and Settlers" by Rosemary and Stephen Benet, "Allendale" by Scott, Longfellow's "A Dutch Picture" and a portion of Vachel Lindsay's "The Kallyope Yell." The first three selections are read by Alexander Scourby and the fourth is a choral reading by a group from the Millburn, New Jersey, Junior High School, directed by Virginia Chilver. The third group, "Background: America," includes Sandburg's "Wind Song" read by the author and "Nancy Hanks" by Rosemary and Stephen Benet and Bynner's "A Farmer Remembers Lincoln" read by Nancy Wickwire. The second side of this record is devoted to prose, including "Clothes Make the Man" by Henri Duvernois, read by Cyril Ritchard, E. Martin Browne reading Homer's "The Odyssey" (introduction), and Charles Dickens' "Great Expectations" (introduction), read by Paul Rogers.

The name of Encyclopaedia Britannica is usually associated with visual material but they have produced a few worthwhile records, of which too few schools are aware. One of these, "Fun With Speech" (EBF Album 2) can be very useful to kindergarten and first grade teachers seeking to help students with speech problems involving the sounds "S," "Z," "SH," "CH," "F," and "V." These several sounds are cleverly woven into simple, entertaining stories about railroad trains and listening requires participation on the part of the children. The stories are titled "How

descriptive  
brochure available

Little Engine Learned to Say 'CH.'" "The Diesel Story," "Little Engine Learns to Blow Off Steam," "How Little Engine Learned to Buzz," and "Little Engine's Dream." The records are written and narrated by speech therapist Hazel Van Horn working in collaboration with Dr. C. Van Riper, Director of the Speech Clinic at the Western Michigan College.

These recordings have been tested in laboratory classes in Kalamazoo and both specific and general directions and suggestions are contained with the album. These stories are intended for practice and training, not for mere entertainment. Teachers are directed to work on one sound at a time; teaching the sound itself first, then followed with a vowel, then followed by nonsense syllables. This can be a game to the children. The teacher is then directed to teach the sound in the initial position in a word, then as the final sound, and finally as the middle sound. The samples given are "chair," "lunch," and "peaches". These recordings are not available through local dealers but only on direct purchase from salesmen representing Encyclopaedia Britannica Films—so ask your salesman about them when he calls again, or write to EBF at 1150 Wilmette Avenue, Wilmette, Illinois.

With the approach of the festive season and the usual year end activities in schools, teachers will want to know of recordings appropriate to the season which will appeal to and amuse students. There are a variety of A. A. Milne recordings, most of them by Frank Luther on the Decca label which children will enjoy. "Songs of Pooh and Christopher Robin" (Decca-K 58) includes "Down by the Pond," "This Warm and Sunny Spot," "Timothy Tim," "Cottleston Pie," and "How Sweet to be a Cloud." The recording, "Songs from 'Now We Are Six'" (Decca K-49) offers such old favorites as "Binker," "The Emperor's Rhyme," "The Engineer," and "The Friend." "Christopher Robin Songs" and "Winnie the Pooh Songs" complete the lineup of small fry songs, all from the A. A. Milne classics and performed by Frank Luther.

"Rudolph, the Red-Nosed Reindeer" is a perennial favorite that will delight the youngsters, too. You may want to bring them Clement Clarke Moore's classic "A Visit From St. Nicholas" as read by Frank Luther on Decca K-20.

There are many recordings of the Dickens "A Christmas Carol" but we are partial to the Ernest Chappell

reading and dramatization which was introduced by RCA Victor many years ago as a 78 rpm album but now is available on a single 33.3 rpm record under the Camden label. There are many other adaptations of this story including that done by Basil Rathbone (Columbia), and the Ronald Colman version (Decca) not to mention the Lionel Barrymore performance (M-G-M). There are also "Christmas Carol" recordings by Caedmon and Spoken Word, which we haven't heard, but which you may prefer. All are good and the best is a matter only of personal taste. You may want to use "The Littlest Angel" and "Lullaby of Christmas" (Decca DL 8009). More detailed treatment of many of these recordings is in the December, 1957 issue of *Educational Screen and Audio-Visual Guide*, page 590.

**Albany 3, N. Y.**

There are hundreds of ways you can use a tape recorder to help you teach language arts. Here are a few suggestions.

- Speech classes can be made more exciting by playing tapes of noted commentators and personalities recorded from radio and TV. Have the class analyze the devices the speaker used to dramatize his important points.
- Letting students record their themes will help the authors detect their written and oral errors as they hear the playback.
- In the lower grades, hold up a picture and make a tape recording as the children tell what they see. Listening to these tapes will show which children have speech defects or problems that you may not notice in class.
- Record compositions at start of term. Save them to play back at the end of term, so students can note their own improvement in reading, diction, delivery and use of more interesting expressions.
- Have students write original poetry and tape it for playback at an "Open House Night" — an interesting addition to the usual display of handicrafts and artwork.
- Class discussions can be facilitated by breaking down the class into a number of smaller groups and tape recording the discussions of all groups for later analysis.

The sound quality of a tape recording can be no better than the quality of the tape on which it is recorded. Educators' critical requirements for fidelity of reproduction and consistent quality are easily met by any of the eight types of Audiotape. This complete line of professional-quality recording tape offers the right recording time and the right tape cost for any application. And, regardless of type, there's only one Audiotape quality—the finest that can be produced. For free tips on tape recording, write for "The Pocket Guide to Tape Recording." ## TOWARD TEACHING GOALS

Splicing a piece of learning into the experience continuum of a group is not easy. It may become harder when the piece to be spliced in is audiovisual in its nature. This means two things, if it means anything. First, the piece spliced in should be so made and structured that it enters this experience continuum with the greatest ease. Secondly, the educator must qualify, if he can (and he can!), this continuum in such a way as to get a good splice. Doing this second job is getting the group ready, and the term I like best is just plain "readiness."

Without discussing here the various formats and forms of readiness, let us note its value in helping us reach our teaching goals: in getting desired outcomes; in conditioning a segment of the experience continuum so that this segment qualifies further learning, and even life itself (so that our activity IS teaching and so that the child's activity IS learning).

Let's just set up four techniques of film use to make the value of readiness vivid:

Technique I. Just the bare showing of the film.

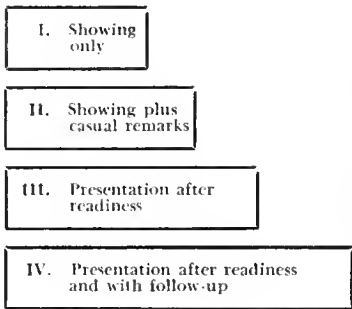

Technique II. Showing of the film plus a casual "introduction."

Technique III. Presentation of the film after use of a carefully prepared readiness (to make the viewer ready to see and to think about what you intend).

Technique IV. Presentation following readiness plus a carefully prepared follow-up via review, discussion, testing, etc., to integrate and stitch this segment into the experience continuum.

Set on a scale, how far can these several techniques get you toward your goal? Based on my testing and experience, and on watching others at work, here is how I would rate them on a scale of 100 points:

0    20    40    60    80    100

In my judgment this scale represents roughly the relative power of these several techniques to wring educational juice out of that much-used audiovisual aid, the sound motion picture, when it has been given a good structure in terms of the job it is to do.

How far do you want to go toward your teaching goals? That depends on you. Technique I won't get you very far. It's hardly worth the bother. Why get out the car to borrow a cup of sugar from the neighbor who lives just across the street!

Some listless remarks before the film is shown will not get you very far either. Some real preparation can double the distance you'll travel toward your goal.

When you add follow-up to your readiness, and the two are related as the sides of a coin, you can really go!

If you are majoring in Technique I or II you may be discouraged. A little experience with III will give you a lift, and some real work with IV will give you a thrill—an educational one, I mean.

How far do you want to go? It's up to you. Film User!

### Screen Convenience

There is no doubt about it, screen convenience helps to motivate usage! If this worker had to wrestle with a tripod screen in front this worship center, she would be much less likely to use visual materials. We are not criticizing tripod screens. They have their place. We use them all the time.

Screen installation in Primary Department of First Presbyterian Church, Glens Falls, New York.

However, here is a place that they don't fit. They would need to stand in front of the worship-center table and that would bring the screen some thirty inches nearer to the children.

Again, we wanted convenience. Plus convenience we wanted safety—both for the screen and the workers. This we got by putting up a wall screen of the right width—approximately one-sixth the distance to the last row of seats. Since we use slides from time to time we got a square screen. Protected from accidents as it is, this screen will have a long life and give complete satisfaction.

And the dividend which comes as an extra to all the others is that it motivates the use of audiovisual materials in this department just because the screen is easy to use. It's always there; and in a jiffy it is down and ready for use, and in less than a jiffy it is back up, out of the way, and ready for the next time—which may not be many Sundays away. Screen convenience pays and pays.

## FILM NOTES AND REVIEWS

When the YMCA does "world service" it is Christian service and there is

no better way to understand what this means than by seeing a dramatic documentary film. Such a film is *Action In Asia*. Photographed competently by Bob Frers, this 28½-minute color film shows us the YMCA Boys' Town in Korea, refugee work in Hong Kong, and a new approach to rural improvement in the Philippines. This film spells out what we have called "missions." It can educate youth and adults, in and out of church, in world-mindedness. It is highly recommended to adult groups in the church and community. They will find it interesting and instructive right down to the last frame. (1)

*Does Christ Live In Your Home?* has 13 basic sequences; all dramatic, all interesting, all convincing. In it we have a pair of grandparents, who know that religion belongs in the center of life; a family with two teenagers, who wonder if religion belongs at all; a business executive scouting for a top representative for his firm; and a boy who plays some fine football. After three or four suspenseful situations, we realize that we, the viewer, have been asked pretty pointedly whether our homes are Christian, and we don't resent it one bit. We are glad for it. It takes a good film to do that, and this IS the best on this subject to date and a very superior film for young people, for adults, for family nights, for public worship services especially. (2)

If a good camera crew tagged along after a little teenager (boy) in Morocco as he set off uncertainly from his village to go to school in the city some distance away, and then followed him as he adjusted to his new home, to new friends, to a strange school; and, if the crew pointed the camera once in a while at what the boy was seeing (so we could see, too); and, if the narrator told us something of the thoughts of the boy in the midst of these things, and commented intelligently upon the problems of the people, then we would have an interesting and instructive film.

Now this is just what the 16-minute b&w *Country of Islam* does—brings Morocco alive: for adults, for young people; for study groups; for those who want background on people and customs; and, for those who just want to see an interesting film nicely put together. (3)

An old and engaging legend is used as the basis for the 14-minute sound and color film, *The Christmas Deer*. As it stands in the film, this legend has a timeless and universal quality which makes you feel that such a thing could happen anywhere. It tells of an old man, a woodcarver, living in the deep woods and seeing the Christmas Deer;

of a little boy who meets him; of their strange friendship; of the old man's beautiful carvings and how he decided to give them away to make others happy, in the act finding happiness himself. Nicely constructed, and with some very beautiful photography, this film will be new and very useful in school and church. The narration is nicely paced, and the music of an old French carol, played on a lute and recorder, enfolds much of the action in lovely sound. (4)

The Albert Schweitzer film is now available in 16mm, good news, indeed, to every church which owns or can beg or borrow a projector! Here is an artistically made document of Schweitzer's life and work, put together with insight and deep appreciation for human and spiritual values. Within and without the church, this film will be appreciated for the superb job that it does in presenting one of the greatest men of our time. Running 83 minutes, it seems in the seeing half as long, and the first half documents his life up to the time of his "call" to Africa. The second half documents his work at Lambarene. The material being more flexible, the first part achieves an artistic excellence which is only here and there reached in the second part. Taken as a whole, this is a great film, and those who struggled over a period of years to make it place all of us heavily in their debt. (5)

The 20-minute b&w film, *Emotional Maturity*, dramatizes in quite believable sequences the immature behavior of a high school boy, giving us a film that parents and teachers, in church and school, ought to see and ponder. Objectified in this film, here is behavior which rankles us and sours our judgment quite often when we meet it head-on around the church or school, or in the community. We don't resent the film, thus we can *think*, and move toward understanding, and perhaps even toward being better parents and teachers of adolescents. Recommended for use in leadership courses and clinics. (6)

## FILMSTRIP NOTES

Around a sandbox six children, in a little play-crisis, express their ideas about God. That's the context for the filmstrip, *First Steps In Religion*, and a very good one. Now we are taken to the homes of these neighboring children. Here we can see clearly how they got the ideas and attitudes which were expressed. In one family, religion is an important matter but pretty much in the rut of habit; in another it is important, but no questions get answered and conduct does not seem to square with talk; in the third, imperfect home that it is (being human), religion is a matter of love and talk, and open seeking after a loving and caring God. Brought off in 60-some frames of good color photographs and a 15-minute LP recording, this is a fine filmstrip for teachers, for parents, for education committees, and a lot of other times when alert leaders will seek to show that the child's idea of God, and his religion, comes from the home. (METH)

Jesus often quoted from the O. T. Prophets, and from none more than Isaiah, who set forth in detail the great spiritual experience which formed the lasting background for his ministry. The visualization of this experience is undertaken in *Vision of Isaiah*, a color filmstrip of 49 frames and a recorded (LP) commentary. Great care has gone into the production of both the visual and the auditory statement, giving us a good and useful filmstrip for curriculum enrichment; for motivating Bible reading and study, and other purposes. This is one of a series of six color and sound filmstrips in Part One of "Story of The Prophets." (CATH)

When Christmas is a matter of the heart, it can be kept, not just "observed" or "spent." When Christmas is a concern of the heart, the old message remains the heart of Christmas—not stores, not crowds, not even gifts. Christmas is smiles, and thoughtfulness, and kindness, and love in the heart before all else. Visualized in lovely art and summarized in a fine commentary, these thoughts of the late Peter Marshall compose a good and useful filmstrip. *Let's Keep Christmas* is good for family nights, for adult groups, for Juniors and up; for youth fellowship groups; and useful, there being a splendid guide to help you. The presentation time is 12 minutes. (SVE)

*A Puppy For Christmas*, with 36 frames of good photography and an 8-minute LP recorded commentary, will have (in the church) most value in an entertainment context, and little beyond that. This reviewer confesses a considerable allergy for using the

Christmas occasion and motif as a "carrying" device to showing off pets or "to give children an understanding of the special care and attention which pets require." Not recommended. (SVE)

Billy and Sue visit Grandfather at Thanksgiving, and learn from him how the day was observed when he was a boy—along about the early 1900's. Touched with nostalgia and humor, and visualized nicely, this 44-frame color and sound filmstrip gives some attention to the spiritual aspects of Thanksgiving and fosters an appreciation of our American heritage. While adult groups will enjoy *Grandfather's Boyhood Thanksgiving* most, Juniors may find it interesting if oriented toward the theme. Acceptable general qualities; fair usefulness. (SVE)

*Simon and Lucy of Alaska* is composed of color photographs of satisfactory qualities over instructive captions. It tells us of life among the Eskimos of St. Mary's, a village of some 40 families who make their living by hunting and fishing. Useful in showing family life, and the work and relaxation of these Eskimos. Of value in the church in enlarging and deepening the appreciation of Primary and Junior children for others. Acceptable for church, but more potential for school. (SVE)

*Stories About Christ Carols* gives a brief history of Christmas carols, then telling how we came to have four favorites: "Away in a Manger," "We Three Kings," "O Come, All Ye Faithful," and "Silent Night." Stanzas of each are projected so that the audience may participate. The 56-frames of this filmstrip are new and pleasing art. Not cartoons, not caricatures, these frames are delightfully stylized in conception, in color, and design. Having a broad spectrum of utilization, here is a filmstrip for purchase for the local church's AV library. (FF)

In the same type of art mentioned above, *Stories About Our Christmas Traditions* gives us enrichment material for all ages beginning with Juniors. While touching effectively and briefly upon many customs and traditions, it keeps the birth of Jesus in focus all the way and closes with accent on this great fact. Thus, a broadly acceptable and useful filmstrip which is destined to be used a great deal over the years, especially if it is conveniently in your church's AV library. (FF)

If I were teaching a class of older Primary or Junior children along in late November or December, I think I would present the filmstrip, *The Christmas Riddle*. I would stop at the end of frame 22. Later, after the class has tried to figure out the riddle pro-

pounded, I would show it again going this time right on to the end. Thus, I would be able to center the thinking of the class on Christmas as the time when God made His love for men manifest. Visualized in full color posed photographs, and, with a narration that combines skillfully dialogue and orchestral background music, this 35-frame filmstrip has fine overall qualities. The leader's guide contains feasible ideas on how to use it effectively. (FF)

Primary and Junior boys and girls will like the filmstrip, *A Pony For Christmas*. In 38 frames of posed color photographs, plus an LP recording that combines narration, live dialogue, and orchestra background, we learn how two little boys, brothers, got ponies for Christmas when there was just enough money for one. We are pleased to see the true spirit in the little boys' attitude toward each other: delighted when at last it takes hold of Mr. Morgan's bitter heart; and, now how about ourselves? What will it do to us—since via this filmstrip we can look in on what it did to others? (FF)

(CATH) Produced by Cathedral Films, Inc., Burbank, Calif., and available from them and from most A-V dealers.

(FF) Produced by Family Filmstrips, Inc., 5823 Santa Monica Blvd., Hollywood 38, California. Buy through your A-V dealer.

(METH) Produced by the Methodist Church, and available from the Methodist Publishing House and its branch book stores.

(SVE) Produced and available from The Society for Visual Education, 1345 Diversey Parkway, Chicago 14, Ill., and also local A-V dealers.

## THE USE OF FILMSTRIPS WITH RECORDED NARRATION

by *Dou M. Fearheiley*

Increasing interest is being given to sound filmstrips for church use. The idea is not new, but the heightened emphasis is. Prominent filmstrip producers are now making extensive use of sound in current releases. What happens is this:

Sound filmstrips move with added pace and interest; presentation time is often shortened; for the producer's message is more directly communicated in its pure form to the audience.

These are major considerations. There is another. The church worker often feels inadequate for the teaching task. Pre-planned materials seem to offer him more security. He may feel more confident in using recorded nar-

ration for a filmstrip subject.

Now let's turn the coin over.

That same worker may also feel that by using a sound filmstrip he can get by with less preparation. Let's face it. Some workers may tend to be lazy. Show a film? Yes—but no introduction, no conclusion, no attempt to point the film toward genuine audience participation. Now the sound filmstrip comes along and poses the same deadly allurements—"flip the switch and let them twitch"—twitching in this case often being the sole audience response.

Filmstrips are for teaching, and teaching in the group situation must involve active participation by both teacher and pupils. There is no substitute for a teacher, but there are tools a teacher may use. One tool is a book. Another tool is a filmstrip. Neither is inherently superior. Each may be superior to the other in specific situations.

As a teaching aid, then, is the sound filmstrip really superior to the non-recorded filmstrip?

Consider these obvious comparisons: (1) The silent filmstrip is less formal, promoting an atmosphere more conducive to open discussion. (2) The silent filmstrip is more under the control of the teacher, who can easily pause at any frame for added discussion. (3) The silent filmstrip is more easily tailored to the needs of the group—the teacher shaping the narration for maximum application. (4) The silent filmstrip allows the teacher to be more at the center of the teaching situation.

But is there no place for the sound filmstrip in the church?

We believe there is a vital place. The advantages mentioned at the beginning of this article are valid considerations. The added space, the artful combination of scenes that require split-second timing, the professional reading voice, the sound effects and mood-creating music—all point to a meaningful experience of religious consciousness.

Here is the broad outline of demarcation: on subjects with strictly teaching emphasis, the non-recorded filmstrip is best. With subjects of motivational and inspirational concern, the sound filmstrip makes a unique contribution.

But for now, recognize that sound filmstrips have not and will not outmode the silent filmstrips. Both types have an important role to play in the contribution that audiovisuals make to your church's program.

(Reprinted, with permission, from the May, 1958, Audio-Visual Aids bulletin of the Sunday School Board of the Southern Baptist Convention, Nashville, Tenn.)

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$6.00.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. \$7.50.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50.

**EDUCATIONAL & RECREATIONAL GUIDES, Inc.**

## CLASSIFIED

**THE CHRISTMAS STORY.** 34 Beautiful full color 2x2 Art slides from paintings in The National Gallery, with an easy reading script commentary for a memorable Christmas Gift or Show, \$12.50 parcel post paid. ARTCO, Box 455, E. Van Nuys, California.

"Talking Book" player in use.

### Library of Congress Buys Stromberg-Carlson Players

The Library of Congress, Division for the Blind, has purchased 1,385 Stromberg-Carlson "Talking Book" players, which are distributed free of charge to blind persons for the purpose of playing the 16 $\frac{2}{3}$  rpm recordings of narrated books. An average volume is recorded on five or six 12" records. The player will also operate at 33 $\frac{1}{3}$  rpm so the blind can enjoy musical recordings as well. Only about 10,000 of the 350,000 blind in this country can read Braille. Approximately 50,000 talking book players are in use, in every state in the union.

### "Reading Eye" Dealer Training

A four-day training course in eye-movement photography, as used in reading diagnostic procedures, was held under the sponsorship of Stanford E. Taylor, president of Educational Developmental Laboratories, Huntington, N. Y. It was attended by 44 audiovisual dealers or dealer salesmen, including some of the best known AV sales consultants among the NAVA membership. The camera finds its principal use among audiovisual and reading specialists, industry directors and school and industrial psychologists.

### Audiovisual in Use by Podiatrists

Audiovisual dealers have just received an assist to their services and prospects for sales to podiatrists and chiropodists, in the publication of a catalog of audiovisual materials by the American Podiatry Association, 3301 16th St., N.W., Washington, D.C. The catalog lists 15 professionally approved 16mm films, 4 slide lectures with taped commentary, 10 taped lectures, 30 display photographs, 5 exhibits, 7 radio scripts and over 1,000 slides. Marvin W. Shapiro, D.S.C., is chairman and M.M. Greenfield, D.S.C., is secretary of the Audio-Visual Council of the Association.

### Those "Old" Victor Projectors

The quest for the ten oldest Victor Animatograph projectors still in school service is bringing an amazing response, according to Hy Schwartz, Victor president. From all over the world come owner reports of pre-war Victors still giving dependable week-in and week-out service. The furthest thus far reported is owned by Mr. G. D. Naidu, of Coimbatore, India. Anyone possessing an early Victor sound-on-film projector still in operating condition is invited to send its serial number and description to Victor Animatograph Corporation, Plainville, Connecticut, U.S.A. The ten oldest, as determined by manufacturing records, will be exchanged for new Victor Assembly 10 models at absolutely no cost. The offer expires December 31, 1958.

### Appointments and Promotions

John M. Leslie, Jr., has been appointed general manager of Orradio Industries, Inc. Formerly with the Ampex Corporation, where he was manager of engineering in the Professional Products Division, Mr. Leslie is a member of the Institute of Radio Engineers, Society of Motion Picture and Television Engineers, Audio Engineering Society and the American Management Association.

Transfilm announces a seven-fold increase in production activity compared with last June. Senior editors Philip Larschan and Michael Calamari have been promoted to staff producer and supervision editor respectively. The animation department has been increased by nine artists and the slidefilm division by another production man.

Mr. George Johnson accepts screen on behalf of Tulane University from engineer Bob Bishop and audiovisual dealer Frank Didier.

### Giant Screen for Tulane

A 40-foot wide Radiant screen, recently installed in the Tulane University Auditorium by Delta Visual Service, is reportedly the largest non-theatrical screen in the south. Any challengers? Stainless steel aircraft control cable, 4,000 lb. test, was used throughout in mounting.

### EBF "Bonus" Ends

The "increased cost of goods and services" impels the withdrawal by Encyclopaedia Britannica Films of the bonus plan outlined in EBF Catalog No. 30. Orders placed prior to Jan. 1, 1958 will be honored under the bonus offer. A 25 per cent discount continues on new versions where the earlier edition is turned in; the same reduction applies on replacement of severely damaged prints. Where cost of repair of a damaged print comes to less than that of a complete replacement the charge will be the regular replacement footage price.

## DIRECTORY OF SOURCES FOR MATERIALS LISTED ON PAGES 589-596

**ABS**—American Bible Society, Audio Visual Dept., 440 Fourth Ave., New York 16, N. Y.

**ANSCO**, Binghamton, N. Y.

**ARGUS CAMERAS**, Division of Sylvania Electric Products, Inc., Ann Arbor, Mich.

# GET MORE FOR YOUR PROJECTOR DOLLAR

## VICTOR 1600 ARC

If the high cost of 16mm arc projectors is forcing you to "make do" with an auditorium-type incandescent—you owe it to yourself to consider the Victor 1600 Arc. It delivers a full 1600 lumens of light on the screen at 30 amps with Mark II Shutter—more than three times that of any incandescent—yet it's still easier on your budget than other 16mm arcs. It incorporates all advanced Victor projector features and a powerful 25-watt amplifier. The 1600 Arc runs for a full hour on one set of carbons, does not require a special projection booth, and is the only arc projector made with 3-case portability.

### SPECIFICATIONS:

*Selenium Rectifier* has top-mounted controls, swivel out legs, built-in tilt lock, is blower cooled. Also serves as base for projector.

*Speaker case* houses 12" bass reflex speaker and is carrying case for 25-watt amplifier-projector unit.

*Lamphouse* has built-in ammeter with motor rheostat, automatic carbon feed, external arc position marker.

Compare the Victor 1600 Arc side by side with other 16mm arc and see for yourself how much more you get for your projector dollar.

# EDUCATIONAL SCREEN & AUDIO-VISUAL GUIDE

DECEMBER, 1958

VOL. 37, NO. 12 *Received*

DEC 9 1958

YEAR-END SUMMARIES  
AND FORECASTS OF THE  
FUTURE FROM AUDIOVISUAL  
LEADERS AND AUTHORITIES

scene from "Christmas on Grandfather's Farm," a Coronet Film.

1955

The recording tape industry introduces the new "double play" tapes, made on 1/2-mil Mylar\* polyester film base, making available twice the normal length of tape on any given reel size and effectively doubling the normal playing time. **Problem:** The new tape is "twice as long," to be sure, but quite fragile, requiring special care in handling.

1957

The recording tape industry introduces the new "sensitized" or "fortified" double play tapes, now made on a special type of reinforced 1/2-mil Mylar\* base that is twice as resistant to stretching and breaking as the 1955 kind. **Problem:** The new tape is indeed "twice as long and twice as strong" now (just as strong as normal tape, in fact), but the price is astronomical.

1958

Beginning November 1, 1958, all Irish "Double Play" recording tape on the market will be of the reinforced, 1957 kind—*but* at the moderate price of the older, 1955 kind. **End of Problem:** This latest Irish "Double Play" tape has the length (2400 feet on a standard 7-inch reel), it has the strength (6 lbs. tensile force)—and you can afford it!

\*DuPont's registered trademark

### irish BRAND recording tapes

are made by the exclusive FERRO-SHEEN® process and are available wherever quality tape is sold. manufactured by ORRADIO INDUSTRIES, Inc., Opelika, Alabama, U.S.A. Export: Morhan Exporting Corp., New York, N.Y.

# It's -EMDE- for the Best in SLIDE BINDING MATERIALS

## -EMDE- MOUNTS FOR 2 X 2 READYMOUNTS

Employs one-piece aluminum frame and ultra-thin micro glass for mounting transparencies in Eastman standard Readymounts. Films are not removed from Readymounts. Sandwiched between the glass sheets, Readymounts are simply inserted into aluminum frame, and frame end folded over—and slide is finished. Frame is standard size and thickness—fits any projector or viewer.

No. 20 (20 frames and 40 glass).....Per Box \$2.00  
 No. 202 (100 frames and 200 glass).....Per Box \$8.00

## -EMDE- 2 X 2 ALUMINUM FRAME & 35MM D. F. FOIL MASK

New double-fold aluminum mask and one-piece 2x2 frame is designed to meet most exacting demands of color film users who desire ease of assembly and all possible protection against Newton Rings, film buckling, moisture, fungus, etc. All metal and glass attracts utmost minimum of moisture—the real cause of steaming and fogging of slides.

No. 35-0 (20 frames, 20 masks and 40 glass).....\$2.00  
 No. 135-0 (100 frames, 100 masks and 200 glass)...\$8.00

## -EMDE- 2 X 2 FRAME AND MASK FOR SUPER-SLIDE & 127 COLOR FILM

New aluminum foil mask accommodates either Super-Slide films cut down from 2 1/4" square films (Rollei size), or new 127 color film. The 2 1/4" square film is merely cut to exact size of double fold mask, placed in folded mask between glass, and inserted in familiar Emde 2x2 aluminum binder. The 127 film is slightly smaller than folded mask, so film is merely taped to one or two edges of mask before folding.

No. 127-SS (20 frames, 20 masks & 40 glass).....\$2.00  
 (100 frames, 100 masks & 200 glass).....\$8.00

## -EMDE- 2 1/4 X 2 1/4 ALUMINUM FRAME & 2 1/4 X 2 1/4 ALUMINUM FOIL MASK

For 120 and 620 film used in ever-popular reflex cameras. This binder offers a new idea in binders of this size by providing aluminum foil double fold mask to eliminate direct contact of film and glass. It is designed to meet the most exacting demands of color film users who desire ease of assembly. This all metal and glass binder provides utmost protection against Newton Rings, film buckling, moisture, fungus, etc.

No. 12 (12 frames, 12 masks, 24 glass & data labels) . \$1.75  
 No. 50 (50 frames, 50 masks, 100 glass & data labels) . \$6.95

**EMDE PRODUCTS** 2040 Stoner Avenue, Los Angeles 25, Calif.

# On the SCREEN

## This Month's Cover

Our cover, highly appropriate to this festive season, is taken from the Coronet film *Christmas on Grandfather's Farm*. This picture recreates rural America in the 1890's through a happy Christmas reunion on Grandfather's farm, revealing the spiritual, physical, economic and sociological aspects of the period through a warm and charming story. The two-reel, 16mm sound motion picture is available from Coronet Instructional Films, 65 East South Water Street, Chicago 1, Illinois.

## In Store for January!

Heading a group of interesting stories to initiate our thirty-eighth year of publication is Dr. Don Williams' inspiring account of the Iranian project of Syracuse University's Overseas Film Unit. In cooperation with the United States Federal government and the government of Iran, the Syracuse Audio-Visual Center set out eight years ago to make films designed for Iranian audiences right on their native soil. It has succeeded in establishing the educational motion picture and other audiovisual materials in use almost all over the country.

Also on the list is an explanation by Dr. Edwin Swineford of the obstacles faced by many teachers in their attempts to use audiovisuals. Other features include helpful suggestions by Edgar Parsons on the prevention of embarrassing, costly equipment failures and a how-to-do-it story demonstrating a microphone hoist in use at San Jose State College.

## AV With Religious Emphasis Scheduled for February

The February issue of *Educational Screen & Audio-Visual Guide* will be designed to further the use of audio-visuals in church-sponsored groups and to aid those engaged in this work in the selection of materials, wise use of budgets and other problems. Of course, this is only an extension of what our Church Department editor, Bill Hockman, ably strives to do in his columns every month. For an overall national view of the religious use of audio-visuals, see the article "AV in Christian Education" by Alva I. Cox, Jr., in this issue.

## Annual Index Expanded

The index of articles, editorials and reviews, an annual feature to be found in the December issue, has been enlarged this year to include brief subject descriptions of each feature article and each of Paul Reed's editorials.

Also, the subjects have been listed, with the pages on which fall the articles pertaining to them. Please bear in mind when using this index that this publication is paged consecutively throughout the year.

## Our Apologies, Mr. Arthur!

Through an oversight, we neglected to mention that the film from which the November cover picture was taken, "The History of the Cinema," is a *George K. Arthur*—Brandon Films release.

— ES

# PHOTOPLAY FILMSTRIPS

Prepared by William Lewin, Ph.D.

**Julius Caesar**, set of 2 filmstrips in black-and-white, presenting 97 scenes in the M-G-M screen version of the play. \$6.00.

**The Vikings** — In full color, 47 frames, based on the Kirk Douglas production. \$7.50.

**Knights of the Round Table** — A set of two filmstrips. Part One, 25 frames, explains the background of the story, its theme, its significance as an early attempt to organize a league of nations and how the United Nations Security Council is the Round Table of today. Part Two, 28 frames, tells the colorful story of the great legend, based on the M-G-M photoplay. \$7.50.

**A Lesson in Mythology** — Explains Andromeda, the Minotaur, Iphigenia, etc., based on M-G-M's *The Living Idol*. 25 frames, color. \$7.50.

**The Glass Slipper**—The charming fairy tale of Cinderella, told in a new way, based on the M-G-M photoplay. 36 frames in full color. \$7.50

**Alexander the Great** — Biography of the first man to conquer the civilized world, based on the photoplay. Shows Alexander's effort to unite Europe and Asia, a task with which the U.N. is still faced. 55 frames. \$7.50.

**Richard III** — Based on Laurence Olivier's colorful screen version of Shakespeare's famous play. 48 frames. \$7.50

**Romeo and Juliet**—Shakespeare's great love story illustrated in color from the J. Arthur Rank production filmed on location in Verona and other Italian cities. 44 frames. \$7.50

**Adventures of Robinson Crusoe** — In full color, 50 frames, a clear pictorial guide to the Defoe classic, based on the United Artists screen version. \$7.50

**Columbus**—Black-and-white, based on the J. Arthur Rank production starring Fredric March. 55 Frames. \$3.50.

**Hansel and Gretel** — In full color, 42 frames, the highlights of the beloved fairy tale as performed by the charming Kinemins of Michael Myerberg's screen version, released by RKO Radio Pictures. \$7.50.

**Greatest Show on Earth** — In full color, a lively pictorial guide to the circus, based on Cecil B. DeMille's Technicolor photoplay, which won the Academy Award in 1953 as the best picture of the year. 40 frames. \$7.50

**Ulysses** — In full color, 64 frames, a pictorial guide to the new Paramount screen version of Homer's *Odyssey*, produced in Italy. An invaluable aid to the study of the classic. \$7.50.

10 Brainerd Road, Summit, New Jersey

# Have you heard?

We have all suffered for and from the child actor in classroom films. That's nothing to the trauma of the film maker as, tranquilizer in pocket, he starts to shoot the picture.

The children on whose slight shoulders so many films rest are of two varieties, pro and non-pro. If a producer chooses the Scylla of the ordinary professional child actor with the Movie Mama who gestures secret little instructions, his picture often is as phony as its human components.

But when the producer uses his own or his friends' offspring, trouble again awaits. We used to have a rule in the days of the capital D Documentary film that one didn't use a middle class housewife to portray a poor store-keeper. And yet to make a teaching point we bravely ask untrained children to recreate situations manifestly foreign to their experience. No wonder so many of these films leave us chilled.

During production we commit other crimes. Just think. The child shows up to make his first "movie" with furry visions of glamour spurring his eagerness. What is the exotic set? A back yard. The crew? Four of his father's friends. The exciting action? He has to hold still while they focus, walk from here to there three times for practice, then pretend that he's really doing something just as he's lost interest in doing it. And then between shots there is *absolutely nothing to do*.

Alas. Glamour always recedes as one approaches it.

All picture making isn't that tedious, of course. We've just finished a film with the least bored actors that ever trod the boards. The plot required that our two boys move a heavy crate of comic books from Jim's house to Bobby's because Jim's father wouldn't let him keep them. What an orgy between shots! 400 comic books! (Incidentally the picture has a moral if unhappy ending. Bobby's mother won't let the comics in the house either.)

Enough. We have to get to the advertisement, so if you want to see some unbored kids in an engaging film on friction, you might let us know. If you feel you can exist without a film on friction, you might let us know anyway. We have quite a number of engaging films.

CHURCHILL-WEXLER  
FILM PRODUCTIONS

801 N. Seward St. L.A. 38, Calif.

## EFLA to Sponsor American Film Festival

A new American Film Festival to show the best films and filmstrips in many fields will be held in New York City from April 1 through 4, 1959. It is expected to attract several hundred entries in the educational, cultural, religious, medical, and industrial fields. Sound and silent filmstrips and 16mm films in 33 categories will be screened and judged by panels of film jurors selected on a nationwide basis. Blue Ribbon Awards will be presented to approximately 25 category winners.

This festival is an expansion of EFLA's long-established program of film appraisal and evaluation. Although more than 3600 films have been rated by EFLA's evaluation project, the Association has not previously made awards. However, the lack of any national nontheatrical film festival in the past two years has been felt by both producers and users, and many requests have been made that EFLA conduct such a Festival.

Any nontheatrical films and filmstrips released in the United States during the calendar years 1957 and 1958 will be eligible for awards in the 1959 Festival. Entry blanks are available from Miss Emily Jones, Administrative Director of EFLA, 250 West 57th Street, New York City 19, and must be returned by midnight, January 20, 1959.

Pre-screening committees in various parts of the country will select those films to be shown at the American Film Festival in New York in April. Awards will be made on April 3, and the prize-winning films will be screened on April 4. Following the Festival, the award-winning films will be shown at special screenings in Chicago and Los Angeles, and in several other cities yet to be selected.

## AV Helps the Handicapped

From the American Foundation for Overseas Blind comes a letter to Helen Keller, counselor for international relations, from a young blind boy. He writes: "I send you a picture of me reading a big braille book. I learned how to read this year. Now I read my favorite stories. By writing braille we

do arithmetic on slates. We find where other countries are on relief maps and a globe. I am learning to typewrite and play the recorder. . . . I belong to the Pets Club and the Gramophone Club too. We learn to swim every week. We take trips. Last month we went to a circus. We went to the stalls and felt the animals and the clowns. The elephants were big."

The Foundation, supported entirely by private individuals, is doing wonderful work establishing schools all over the world, supplying equipment, publishing braille and recorded books and providing many other services.

## Harvey White Physics Course in "Continental Classroom"

For the first time in the history of television a full college course is being offered to the general public on a nationwide basis. Dr. Harvey E. White, Professor of Physics at the University of California and consultant to the Atomic Energy Commission, is conducting a course stressing basic physical principles the first semester, atomic and nuclear physics the second.

Called "Continental Classroom," the program is telecast every morning from 6:30 to 7:00 (local time) by the stations of the National Broadcasting Company. It is sponsored by NBC, the Ford Foundation, the American Association of Colleges for Teacher Education and the Fund for the Advancement of Education. Over 300 colleges and universities are offering credit courses through these telecasts; they are being made available at no cost. Aimed at high school science teachers, they will provide college credit to an estimated 15,000—one-fifth the total number of high school science teachers in the country.

## Calendar of Coming Events

- Dec. 4-6 — New York State AV Council, Hotel Syracuse, Syracuse, N. Y.
- Dec. 13-16 — Visual Communication Congress, Hotel Sherman, Chicago, Ill.
- Dec. 28-31 — Speech Association of America, American Educational Theatre Association and allied groups, national convention, Conrad Hilton Hotel, Chicago, Ill.
- Jan. 22-24 — NAVA Midwinter Conference, Jung Hotel, New Orleans, La.
- Feb. 14-19 — AASA national convention, Atlantic City, N. J.
- Feb. 26-28 — Harwald Co. annual AV Cracker Barrel, Evanston, Ill.
- Mar. 22-25 — California Association of Secondary School Administrators, Sacramento, Calif.
- Apr. 1-4 — American Film Festival, New York City.
- Apr. 2-3 — Illinois Audiovisual Association, conference, Springfield, Ill.
- Apr. 13-16 — DAVI annual convention, Seattle, Wash.
- Apr. 17-18 — NAVA Western conference, Olympic Hotel, Seattle, Wash.
- Apr. 29-30 — Columbus Film Festival, 7th annual, Fort Hayes Hotel, Columbus, Ohio.
- May 4-8 — SMPTE, 85th semi-annual convention, Miami, Fla.
- Sept. 29-Oct. 2 — Industrial Film and AV Exhibition, New York City.

## Fall Meeting of IAVA

The Illinois Audio-Visual Association held its annual Fall meeting at the Jamieson School and the Acres Motel, Chicago, October 24, 25. Highlights of the two-day program included a completely visualized presentation of the current status and problems of ETV by Dr. Philip Lewis, Director of the Bureau of Instructional Materials of the Chicago Public Schools, and a repeat of the Division of Visual Education three-screen "extravaganza" with narration by Dr. James Fitzwater. A series of nine visualized "reports" by a 6th grade class of children specially gifted in the language arts provided examples that most adult teachers might well emulate. E. C. Carrington, of the Allied Radio Corporation, provided an outstanding demonstration of stereophonic sound.

Constitutional changes adopted at the business meeting wiped out the traditional differentiation between "active" (academic) and "associate" (commercial) membership and pro-

vided for one member of the seven-man executive committee to be elected "from the industrial or commercial field." William F. Kruse was elected in that capacity for a three-year term. Elizabeth Bloss, Director of A-V Instruction at the East Aurora Public Schools, was also chosen for a full term and Orlin Trapp, assistant principal of the Waukegan High School, is to fill a two-year vacancy. The committee is made up of three members in public school work, two from teacher training institutions, one from industry, and one at large.

The next spring meeting will be held at Springfield April 2-3; and the 1959 Fall meeting will be at Moline, October 23-24.

## Girl Scouts Reach Membership Through Educational TV

The Girl Scouts are the first youth agency in the U. S. to reach members through nationwide educational TV. A ten-week series of programs, "Adventuring in the Hand Arts," began October 29 on the NBC-ETV circuit. It is a cooperative endeavor of the Scouts, the National Broadcasting Company and the Educational Television and Radio Center, Ann Arbor. Produced in NBC's New York studios, the series is distributed "live" through the Center.

A team of researchers representing the three cooperating organizations will evaluate the effectiveness of these programs.

**CECO is happy to SELL**  
— just as happy to RENT  
*the world's finest Cameras*  
and equipment

### 16mm Professional Film Viewer

Easy threading, portable, will not scratch film. Views film left to right on 6"x4½" brilliantly illuminated screen. Sound Reader and/or Counter easily attached. Available in 35mm.

16mm Model \$350.00

35mm Model \$500.00

Some companies prefer to make outright purchases. Others, including the top studios, realize that it just isn't economical to buy everything. Every CECO rental is checked out for accuracy and performance by factory-trained experts before you get it. For superior film making, use CECO service for cameras, dollies, tripods, blimps, lenses, viewers, generators, lights, recorders, mike booms—you name it, we have it. For Sale or Rent.

### CECO Auricon Cine—Voice Conversion

Cine—Voice Camera modified to accept 1200-ft, 600-ft, and 400-ft magazines; has torque motor for take-up. Includes Veeder footage counter.

\$450.00 Conversion only—less magazine.

### Professional Jr.\* Tripod on CECO

#### 3-Wheel Collapsible Lightweight Dolly

The newest PRO JR. Tripod features simple camera attaching method, telescoping pan handle with adjustable angle, pan tension knob, cast-in tie-down eyelets, and self-aligning double leg locks. PRICE \$150.00

3-WHEEL DOLLY collapses into compact shape. JUNIOR weighs 15½ lbs. SENIOR weighs 18 lbs. Any tripod easily attached. Ball bearing locking rubber tired casters with indexing device.

Junior \$99.50

Senior \$150.00

# Leadership and Readership

If there had been room on the cover, we might have labeled this final issue of EDUCATIONAL SCREEN'S thirty-seventh year as the "Let's-pause-and-see-where-we-are-before-we-plunge-forward-issue." That's what we were thinking of when we invited the organizational leaders of the field to summarize progress and take a forward look. We want this issue to give you perspective for your own planning. We hope our author-leaders have here provided you with facts and opinions to encourage and inspire you to take stock as you stride confidently forward with your own 1959 audiovisual plans.

We've taken stock too as we thumbed through the past eleven issues, re-read some of the editorials, and re-viewed the articles, columns, and advertising. Not only do these several hundred magazine pages report and reflect what has been happening in the audiovisual field during the year, but they also point directions, stimulate ideas, and continually provide a challenge to move forward. In a word, these pages provide leadership. And we believe it is this leadership that provides readership.

This is one magazine, and the only magazine, in the audiovisual field that attests to the world the facts of its readership. 1958 was the year that EDUCATIONAL SCREEN AND AUDIO-VISUAL GUIDE earned its membership in the Audit Bureau of Circulations. It now has the right to display proudly the hallmark of its achievement—the A. B. C. symbol of its membership.

Membership in the Audit Bureau of Circulations usually is of concern only to the business management of a magazine and to the advertisers. This is understandable because a magazine like this one is dependent upon its advertisers; and audiovisual advertisers have to make sure that their important messages about the equipment and materials of the field are getting through to the audiovisual people who must know about them. Advertisers know that A. B. C. membership is open only to those publications which can qualify under the highest standards of circulation value—standards that are recognized throughout the advertising industry. We are proud that we have attained these standards.

This pride is an editor's pride as well as a pride of management; and it should be a matter of reader concern just as it is a basis for evaluation by advertisers. Our readers are uniquely dependent upon our advertisers for their materials and equipment. Our readers—and this fact is attested—are those who are concerned with using audiovisual methods for communicating facts and ideas. They are the ones who are communicating audiovisually and who are responsible for audiovisual programs. Our readers must have the audiovisual equipment and materials our advertisers produce and sell. Our readers must know what is available for their use, and our A. B. C. membership should result in more of this essential information being brought to them.

The A. B. C. symbol also brings to our readership an assurance that our leadership is likely to continue. In submitting this magazine to the supervision and discipline of A. B. C. audits, the publisher, Hal Gillette, affirms openly that his primary obligation and responsibility is to the readers of this magazine. He has said, in effect, that readers are of prime importance and that the editors must maintain every effort to continue to provide the readers with what they want to read about audiovisual materials and equipment.

So as we move forward confidently into 1959, you our readers can be assured that we the editors of THE audiovisual magazine are going to continue and renew our efforts to provide the leadership that produces the readership.

*Paul C. Reed*

# YOUR GUIDE TO THE NEW, LOW-PRICED KODAK PAGEANT 16mm Sound Projector, Model AV-085

2

3

4

5

6

7

8

When you select a sound projector, demand more than just a machine for showing movies. Use as your standard the new Kodak Pageant, Model AV-085, at just \$439.\*

1. **Easy setups**—No muss or fuss for you (or your students). Film path is printed on projector. Reel arms fold into place; drive belts are permanently attached. You're sure every show will be off to a good start.
2. **Image brightness**—Don't settle for washed-out pictures, even in hard-to-darken rooms. Get the sparkle and details that the Pageant's Super-40 Shutter provides—40% more light than an ordinary shutter at sound speed.
3. **Full range sound**—A speaker must be baffled to make the low tones fully audible throughout the room. The Pageant's NEW, compact 11 x 6-inch oval is baffled in an attractive case that forms the cover for your projector.
4. **Permanent lubrication**—The most common cause of projector failures is improper oiling. You never have this difficulty with a lubricated-for-life Pageant. It's always ready to go when you are!
5. **Rugged and compact**—Printed circuits in the new 8-watt

amplifier are rugged, help make this unit compact and easy to service. You can easily move it from room to room, set up to show almost anywhere.

6. **Fidelity control**—This feature is important because a sound track can be on *either* side of a film. Only with a focusing control like the one on the new Pageant can you get the optimum sound, *no matter* which side the track is on.
7. **Protection against wear**—The pulldown claw moves the film 28,800 times during a single showing of a 20-minute movie. A tungsten carbide tooth on the new Pageant makes this part virtually wearproof.
8. **Grounded power cord**—New 3-wire cord (complete with adapter for 2-wire outlets) meets electrical codes in all locales.

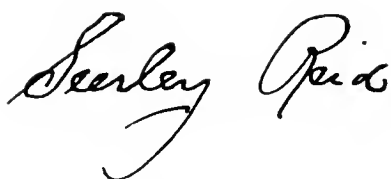

This exceptionally fine projector is only \$439. Ask a nearby Kodak Audio-Visual Dealer to demonstrate the AV-085. Or, write for new Pageant booklet giving all the facts.

\*List price subject to change without notice.

# A YEAR

Chief, Visual Education Service,  
U. S. Office of Education,  
Washington, D. C.

**W**HERE are we? Where have we been? Where are we going? These are the questions I face in attempting an audiovisual review of 1958 and preview of 1959. They are not easy questions to answer and I am tempted to paraphrase the title of a recent best-seller\*: Where are we? HERE. Where have we been? THERE. Where are we going? SOMEWHERE.

Statistically, the three questions simply cannot be answered. We have no national quantitative data collected at regular time intervals over past years which would provide an index of changes and a base for forecasts. We know the number of dairy cows on U. S. farms every year for the past 25 years (20,510,000 in 1958) but do not know the number of 16mm film projectors in use in schools and colleges for any year. We measure the change in consumer prices every month but we have no index measuring the status and growth in audiovisual education. This state of ignorance disturbs me greatly, as I indicated in a paper delivered to the Research Committee of DAVI at its convention last spring. Perhaps a remedy can be evoked from the National Defense Education Act of 1958. More of this idea later.

Maybe it is best that statistical answers cannot be made to the three questions I have posed. Valuable as numerical data are, they frequently do tend to constrict imagination and thinking. At any rate, practically, I must rely on observations and insights—and perhaps even astrologic hunches.

1958 has been an extraordinary year for audiovisual education—a year of challenge, of cooperative effort, of genuine accomplishment. The educational values of audiovisual materials are now recognized both explicitly and implicitly in Public Law 85-864 of the United States of America, more popularly known as the National Defense Education Act of 1958, now inevitably abbreviated to “864” or “NDEA.”

There is no need here to recite the audiovisual provisions in this Act. They are numerous, ranging from grants to states for the purchase of audiovisual materials and equipment to the training of teachers in the use of AV instructional materials to research and experimentation in the potentialities of new educational media. Paul Reed has ably called them

\*Smith, Robert Paul, *Where Did You Go? OUT. What Did You Do? NOTHING.*

# FOR DECISIONS!

to the attention of SCREEN readers in his September and October editorials. The National Audio-Visual Association has summarized their highlights in its new and attractive booklet, "AV-864." And, of course, many of you have read and studied the Act in its complex entirety (and probably now amen the observation, "We should have lived in this house for a year before we built it!").

There has been a tendency to compute the values of NDEA in terms of dollars which will be available for audiovisual equipment and materials and projects. There is nothing wrong with this approach, of course, and it is perfectly understandable that organizations such as NAVA and NAEB should give this information to their members. But there is a danger, I believe, in over-emphasizing this feature and implying, intentionally or innocently, that NDEA is a give-away program. Far too many of the proposals and requests so far made to the U. S. Office of Education are of this nature. Some, believe me, are unbelievable.

Rather than assess the values of NDEA in terms of dollars and increases in the number of items of audiovisual equipment and materials, I should like to turn to the other side of the coin and appraise audiovisual education in terms of the influences of NDEA. They are many; some are obvious, some are not. But they do need thoughtful consideration *now* for they are going to force us to make decisions in 1959. And these decisions may well decide the future of AV in education.

First, let's go back to my comments concerning the lack of AV statistics, the need for an index or indexes of change in audiovisual education, and the possibility of achieving the necessary data through NDEA. Title VII of the Act provides that the U. S. Commissioner of Education "shall prepare and publish an annual report setting forth . . . developments in the utilization and adaptation of media of communication for educational purposes." To prepare such reports the U. S. Office of Education will undoubtedly need to collect statistical data to serve as bases for the identification and assessment of such developments, and such data may very well serve, individually or in aggregate, to compile an index or indexes of audiovisual status and growth.

What are the components of such basic data? We can list a hundred different items, perhaps a thousand. Which ones are the most valid in-

dictators of AV status and growth, the most reliable from year to year, the most sensitive to the recording of changes? These are questions you and I must answer. They are our decisions for 1959!

A second example of NDEA's influence on audiovisual education—a most important one immediately and probably forevermore—lies in Title III which provides that any state wishing to receive payments from the \$70,000,000 authorized annually for strengthening science, mathematics, and modern foreign language instruction must establish standards for audiovisual and other equipment to be purchased with such funds. The precise nature of these standards is left to the individual state departments of education except that such standards must be approved by the U. S. Commissioner of Education.

A USOE survey a year or so ago revealed that 47 states had no published standards for audiovisual equipment to be used in schools. So we shall have to start from the beginning. What are the ingredients of such standards? Tentatively, USOE is saying that they must be such as to require that the equipment (and materials used therewith) be suitable for science, mathematics, and foreign language instruction, that they be appropriate for a specific level or levels of instruction in elementary and secondary schools, that quantity be determined in terms of realistic needs, and that quality be a determinant. So far, so good. But the specific application of such guidelines really raises problems. How many filmstrip projectors are needed in a 500-pupil elementary school for improving the teaching of arithmetic? What are the differences in specifications for microscopes to be used in 7th-grade general science classes and in 12th-grade advanced biology? What engineering and performance standards can be used to differentiate between and among the models of different manufacturers? Again, these questions have no easy answers and decisions must be made in 1959!

There are many, many similar questions in NDEA—of definitions, emphases, interpretations, priorities, evaluation. Many of them will arise in the day-to-day operation of its various provisions. The extent to which we exhibit imagination and wisdom in finding answers and reaching solutions will have profound influence upon the growth toward maturity of audiovisual education. The past is prologue. 1959 is a year for decisions!

# 864

**T**HE Chinese have a most interesting custom of naming each year in a distinctive fashion. Surely, if anyone in the audiovisual field were to name this past year, it would have to be as "The Year of The Law" — and most everyone in the audiovisual field would know *which* law.

The National Defense Education Act is without doubt the most outstanding development for the AV world during the past twelve months, on at least two counts: it marks a commitment by the Congress of the United States to the immediate application of more modern teaching tools; and it provides substantial funds to further research for new ideas, new ways, and new instruments through which to build still better instruction on the firm foundation of sound sensory experiences.

The National Audio-Visual Association is proud to have had a part in shaping this legislation, along with other professional groups. This is probably the single most significant activity of NAVA during the past year, just as our continuing effort to aid in building effective state plans for participation under the Act, with audio-visuals well integrated in each plan, is probably the single most significant activity we can undertake for the field in the coming months.

The first step in this program to aid in establishing effective state plans has already been taken, with the provision of accurate and immediate information on the Act

and its interpretation to a great many persons in education generally, and in audiovisual work specifically. An illustrated 16-page booklet, titled *AV-864*, has been produced, and more than 55,000 copies have already been printed. Single copies are free to educators for the asking, from our Fairfax, Virginia headquarters or your nearest NAVA dealer. As new interpretations are added to the law, we will publish bulletins on them.

The second step in this program is the action of the Association's Board of Directors just taken in making our Executive Vice-President, Don White, available for personal assistance at the state and local levels in connection with the formation of state plans and developments under these plans. His long experience in the AV field and his intimate knowledge of the new Act make possible effective guidance in forming plans and setting up activities.

Other steps in NAVA's continuing program to build better acceptance of audio-visuals on knowledge of what they are and what they mean will get under way in the new year: work will continue with the Audio-Visual Commission on Public Information, which in the past has aided in production of such "landmark publications" in the AV field as *Gateway to Learning*, *A Crisis in Education*, the sound slide set *Case of the Curious Citizen*, *AV on the Air*, *Telling Your AV Story*, and *Launching*

*Your AV Program*: These are all available from the Commission, Room 2230, 250 W. 57th Street, New York City 19.

I believe that the level of audiovisual applications in our nation will rise surely during the decade, and certainly not so slowly in education as heretofore. Among the most promising developments is the growing emphasis on language learning, coupled closely with wide use of audiovisual techniques not only in language study itself, but also in the study of many areas of knowledge about a country required as background for language learning. Here, too, the National Defense Education Act furnishes tremendous potential support of a program for teacher's institutes and college language learning centers.

In other areas, too, advances have come this past year. Greatly increased interest in materials and equipment for modern teaching and for more sophisticated AV techniques was very much in evidence at the 18th annual National Audio-Visual Convention and Exhibit, held during July in the Morrison Hotel in Chicago. More and more areas of business and industry, of religious work, of medical and allied sciences, and of agricultural and other areas of American life, are turning to audiovisual media for the answers to their growing problems of clear, concise communications.

One result of such interest in improving materials and techniques was the NAVA Filmstrip Standard Conference, held in Chi-

*P. H. Jefferson*

President

# "The Year of The Law!"

cago early in October. Representatives of both producing and consuming groups met to work out details for standardizing leader length, identification marks, frame size, and similar matters; a Conference report is being prepared.

The National Institute for Audio-Visual Selling, sponsored by NAVA at Indiana University annually, completed its first decade of operation this past summer; each year it has added a group of graduates trained not only in techniques of audiovisual selling and business operations but also provided with a strong professional

background for understanding AV applications and preparation. Its graduates have been a strong influence in the forward movement of local production techniques, for instance, in their local areas.

Moving ahead not only into a new year, but into what must be considered by far the most promising decade for audiovisual education which the field has yet faced, NAVA is once again committing itself through each of its individual members and through its national staff to work strongly for better instruction in American schools, as well as for the general advance-

ment of the audiovisual field. We face a definite and heavy responsibility, in our individual capacities as AV suppliers, to work closely and in strong support of educational and other leaders to make sure that programs now in progress and those initiated under the new legislation continue to be based on firm foundations, yet remain flexible enough to make the giant contributions to instruction that only audiovisual can make.

*Illustrations are from the NAVA booklet AV-864, mentioned above.*

Utilization of Television,  
Radio, Motion Pictures, and  
Other Audio-Visual Aids  
for Educational Purposes*

JCET

# Educational Television

**I**T is possible to make an assessment of educational television's development and effectiveness using a number of different criteria. In terms of the number of new ETV stations on the air, 1958 was the most productive single year since the Federal Communications Commission reserved channels for education in 1952. Twelve new stations went on the air in 1958, raising the total to 39 stations, serving an area with a total population of well over fifty million people.

A similar growth was experienced in closed circuit ETV operations in this year. The Joint Council on Educational Television's recent closed circuit survey presents detailed information on the equipment and use of nearly 200

closed circuit installations.

Development may also be measured in terms of professional competence in the use of television for educational purposes. As more educators become familiar with television as an educational tool, new programming services are devised to meet the challenging problems of providing a better education to more children and adults. In a 1958 survey of programming on educational stations, the Educational Television and Radio Center reported that nearly 400 more hours of programming were being shown on ETV stations during one test week than in the test week for 1957. This was more than twice the increase of 1957 over 1956, the largest increase up to that time.

Michigan State University's 1957-58 survey of telecourses reports that in this period 464 educational TV courses were offered during this school year. On-air courses increased 112% over total from 1951 to 1957, offered by 53 universities, 34 colleges, 20 public school systems, 3 networks and 2 state departments of public instruction.

By far the largest increase, however (in terms of program categories), was that of in-school telecasting. In 1958 the number of elementary teaching programs via television quadrupled and secondary teaching programs increased five-fold. There appears to be no change in this trend toward greater and more effective use of television in the public schools. Indeed, in 1958 two new educational stations went on the air for the purpose of providing nearly 100 per cent of their programming time for in-school enrichment and direct teaching. Both supplemented the educational station programming already available in their areas.

Greater professional competence has strengthened public acceptance of television's role in education, still another, and more important criteria of development. A 1958 JCET survey revealed that 25 state legislatures have taken action which has directly affected the continued

# 1958!

*Ralph Steette* Executive Director

development of educational television.

Although the Magnuson Bill to provide one million dollars for each state to purchase equipment for educational television failed to pass in the 85th Congress, Title VII of the National Defense Education Act of 1958 included the provision of eighteen million dollars for research and experimentation in more effective utilization of television, radio, motion pictures and related media for educational purposes.

The JCET, representing ten national education organizations, has been directly associated with all of the above developmental aspects of ETV. Beyond its responsibilities of legally protecting the channels reserved for education, the JCET also initiates and supports requests for new educational channels.

Among the formal pleadings filed with the FCC in 1958, perhaps the most notable were two petitions filed on November 3, 1958, one of which asked the FCC to make a thorough investigation of television allocation as a first step toward removing some of the serious obstacles to effective noncommercial telecasting, particularly in large metropolitan areas. In this document the Joint Council asked for steps to be taken to enable educational service to be provided and expanded by the use of VHF channels. The second petition requested that specific VHF channels be reserved in Panama City, Florida; Waycross, Georgia; Reno, Nevada; Rochester, New York; Norfolk-Portsmouth-Newport News, Virginia.

It is likely that by the end of 1959 more than 50 ETV stations will be on the air. Education—particularly higher education—will, in this year, begin to realize the advantages of state and regional networks, a development which will unquestionably have a most important effect upon the entire movement. Programs of research and experimentation will point the way to new possibilities in the teaching and learning process.

ETV's position of strength and vitality as it moves into the activities of 1959 must be viewed

in a total educational framework. There is much to be accomplished and television has much to offer as a servant in the hands of skilled educators. In this connection it is enlightening to review the testimony of educators who came to Washington seven years ago to express the need for reserving a portion of America's television channels for noncommercial broadcasting. In 1951, statements concerning ETV's potentialities were based largely upon faith. Nevertheless, it is heartening to note that the predictions of 1951 have become the realities of 1958. Indeed, much has now been accomplished which was neither envisioned nor expressed before the channels were reserved. Such a history promises much for 1959—and the years which follow.

**E**DUCATION in 1958 is profoundly stirred. In a sense a great awakening is taking place. And most significantly, the stirring appears to be coming from within. Broad and fundamental changes are beginning to form in the minds of educators generally. The next ten years can witness the most striking progress in the whole history of education. A major part of this progress will be in the area of instructional methods and materials.

The problems of education—bulging enrollments, shortages of classrooms and teachers, rapid and extensive increases in knowledge to be taught, and a world in which that knowledge and its intelligent application have suddenly become vital—are forcing changes upon us. It is a credit to our educators that they are not being stampeded either by their ever-ready critics or by ready panaceas. It is much more to their credit that they are moving, nonetheless, toward extensive but soundly conceived changes in curriculum, in instructional methods and materials, and in administrative organization to facilitate these changes.

It is in such a context that DAVI's program in 1958-1959 should be viewed. The work of many fine people in the audiovisual field over many years is beginning to bear fruit. The National Defense Education Act of 1958 is itself dramatic testimony of a kind of recognition for the audiovisual movement which was undreamed of a few short years ago. Our No. 1 job now and in the months ahead is to see that potential benefits under that Act are realized in fact. To do less than our utmost on this effort would be unthinkable.

Among several unique characteristics, DAVI is an example of what cooperation can do. Its extensive national program would do credit to an organization with several times its present membership of 3500. Some 30 national committees involving over 200 members carry much of the total program. Over 85 members participated as official representatives of DAVI in 42 national and regional educational meetings during 1958. This shared responsibility is one important reason for the vitality, effectiveness, and program breadth of DAVI.

Similarly, hundreds of members worked actively in support of the Hill-Elliott Bill, now Public Law 864, the National Defense Education Act of 1958. A small delegation headed by the president testified before the House Committee on Education and Labor last March and filed testimony also with the appropriate Senate Committee. Many personal conferences were held during the spring and summer with members of Congress by the Washington staff. But of most importance were the letters, telegrams, and contacts by many hundreds of members with their own Congressmen, and the efforts of the DAVI Legislative Committee, chaired by Irv Boerlin. The coordinated efforts of NAVA and DAVI were largely responsible for the inclusion of the audiovisual features of the Act and a strong factor in its final passage.

January, 1959, will mark the beginning of the fourth year of publication of *Audio-Visual Instruction*, the official magazine of DAVI. Both

content and appearance of the magazine continue to bring compliments. Similarly, *AV Communication Review*, the research quarterly, is performing a significant role for audiovisual instruction in the educational literature. Other publications of DAVI during the past year were: *No. 1, CLASSROOMS*, a completely revised and enlarged third edition; *National Tape Recording Catalog, 1958 Supplement*; *Graphic Communication and the Crisis in Education*; *Television in Instruction: An Appraisal*; *Proceedings of the NEA Leadership Seminar on the Role of Television in Instruction*; *Evaluative Criteria for Audio-Visual Instructional Materials Services*; *Audio-Visual Checklist for Self-Evaluating Teacher-Education Institutions*.

One of the rapidly expanding areas of DAVI leadership is in joint committees and activities with other professional organizations. At present DAVI has eight liaison committees with such organizations as the National Association of Educational Broadcasters, American Association of School Librarians, Association of College and Reference Librarians, and the Association for Supervision and Curriculum Development. In addition, we sponsor, upon request, sectional meetings on audiovisual topics in conventions of other associations, e.g. ASCD and Elementary School Principals. We join others in the preparation of publications such as *Audio-Visual Materials for Physical Education*, *What Research Says to the Teacher*, *Audio-Visual Instruction*, and one now in progress with the Rural Education Division of NEA. Similar conferences, committees, and joint activities are encouraged among our affiliated state groups.

In August, DAVI held its third Leadership Conference at Lake Okoboji in cooperation with the University of Iowa. The conference resulted in a significant document on "Pre-Service Teacher Education in Audio-Visual Instruction." Next August another conference will be held on the subject of "Audio-Visual Research." Similar leadership conferences are now being held by several state and regional groups. There is a growing recognition of the need for setting aside a period of time when leaders can isolate themselves from their usual duties and concentrate upon a major problem area.

For many years DAVI has performed consultant service for members and other educators. Through committee activities and research leading to publications, a body of information has been built up which has enabled the organization greatly to improve its services in this area. The most recent development has been the establishment of a field consultancy service available to colleges and school systems requesting assistance in a constructive evaluation of their audiovisual programs. This Field Service Program has functioned effectively for several years across the country.

The audiovisual field has for years sent a larger percent of its personnel for professional work abroad than any other educational field. Until recently, however, DAVI took little cognizance of this international activity in relation to its total program. This situation has changed markedly. We now have 175 members from 40 foreign countries and a Canadian affiliated or-

ganization which means that one member of the DAVI Board of Directors is from Canada. 185 copies of *Audio-Visual Communication Review* go to 52 foreign countries. The Executive Secretary of DAVI is the U. S. representative to the International Council for Educational Films. A year ago, an International Relations Committee was appointed which is now planning greatly expanded attention to international affairs in the audiovisual field.

Another indication of DAVI's interest in international affairs was the leadership taken during the past year in organizing the Committee on International Nontheatrical Events (CINE) which coordinated the selection on nongovernmental, nontheatrical films for the Edinburgh and Venice Film Festivals. CINE is a cooperative project involving industry and organizations with interest in the 16mm film field. At a meeting of CINE in October, an expanded program of activities was planned for the coming year.

Several new publications will be issued during 1959 including *Learning Through Picture Study*, *Cooperative AV Programs*, and *Organizing the School Service Corps*. Another publication is anticipated following a television seminar being held in December to explore methods of increasing individual involvement when television is used for instructional purposes.

During the 1958-1959 year DAVI, through its national committees, its publications, and various special programs, including the National Convention in Seattle next April, is emphasizing:

1. Implementation of the National Defense Education Act.

This means working with other educators in the development of state plans, and later at the local level to see that audiovisual materials make the greatest possible contribution to the improvement of instruction. It also means working for an appropriation bill which will provide the maximum funds authorized in the Act.

2. Improvement of methods now used to develop audiovisual competencies during the pre-service teacher education period.

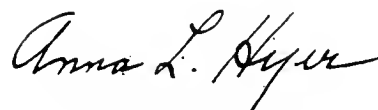

3. Increasing the number and effectiveness of state and regional audiovisual organizations.

4. Increasing membership in DAVI to 5000.

The National Convention is the high spot of the year. One of the most successful conventions ever held by DAVI was conducted in Minneapolis last Spring. Next April 13-16, the Convention will be held in Seattle. All indications are for a highly interesting and profitable experience built around two major themes: more effective teacher education and implementation of the National Defense Education Act. In 1960, DAVI will meet in Cincinnati and in 1961 at Miami Beach.

Forthcoming developments in our educational system hold great promise for the audiovisual field. The opportunity is here to demonstrate the real contribution we can make to better schools. To accomplish this goal, we need many more good educators as members of DAVI. To all who have an interest in the methods and materials of instruction, we extend a cordial invitation to join forces with us.

# DAVI and Education Developments in 1958-59

Executive Secretary

# The Role of the NAEB

Harry J. Skarva

Executive Director

AT mid-century, America finds itself strangely uneasy. What is our reputation abroad? How strong is our leadership? Have we lost Asia? Have we lost world respect? Are we too materialistic? How can our educational system best be assisted by us and our tools to meet the pressures and criticisms precipitated on it (but not caused) by Sputnik?

A few years ago, these would have seemed like strange questions for an association of educational "station operators" to be talking about. For we would have been expected to be praising or exercising our gadgets: microphones, cameras, films, trick shots, echo chambers, etc.

I think we can refer to 1957-58 as the year the NAEB most definitely began to give the most evidence to date of having "found itself" . . . when it began to exhibit the type of broad understanding, educational orientation, leadership, and confidence in its own resources that mean that it's now "growing up."

For many years we had felt vaguely aware of the need for better training and higher standards for the people in charge of planning and producing the intellectual and cultural radio and TV fare on which Americans live, thrive or grow; or vegetate and wither. In 1949, with the first Allerton Seminar, we held our first "soul-searching" sessions. Since then we have held some 24 national seminars and

workshops, which have been attended by some 700 members of the staffs of educational stations. These people have been brought together in close association with over 100 consultants of the level of Harold Lasswell, Robert Redfield, Edgar Dale and Allen Nevins, representing the best minds, in many problem areas, in our nation. For the NAEB has always felt that incest must be avoided at all costs: we must constantly expose ourselves to the best minds and the most basic social, educational, economic and moral problems of the U. S. In how we handle those problems we shall demonstrate whether or not we have achieved intellectual and professional maturity, or whether we represent an essential service or not.

In the programs provided by NAEB member stations, both in radio and television, that maturity is being demonstrated more and more. We are proud not only of *Jeffersonian Heritage*, *Ways of Mankind*, *People Under Communism* and our various earlier prestige series. We are equally proud of *The Dead Sea Scrolls*, *The Creative Mind*, *Pacific Portraits*, and other series produced by our regular members. It would have been ridiculous to expect member stations to be able to turn out such uniformly high quality programs a few years ago. Thanks to our program grants-in-aid (now handled jointly with the Educational Tele-

vision and Radio Center), standards have risen—and what seemed unrealizable goals a few years ago are now commonplace standards. A tradition of quality and integrity has sprouted in what yesterday was desert.

In addition to the program grants-in-aid, which have assisted some 40 member institutions (often indirectly) in improving staff and production facilities, grants-in-aid have also been given to help member institutions to set up and conduct workshops and seminars on their own; for teachers, administrators, producers, writers, managers and those teachers who use the programs. This year 12 such workshop grants-in-aid were given. This supplemented the seven program grants-in-aid given, the three research grants-in-aid given for new types of original research, and the seven national seminars, workshops and meetings we have ourselves conducted since December of 1957—in research, instructional techniques and utilization, station management, teacher-training, engineering and recording, children's programming, and cooperation with other national organizations. The NAEB's own intensive workshops, seminars and conferences (excluding Conventions and Regional Meetings) were attended by 203 different individuals involved in educational uses of TV and radio; 19 more were recipients of NAEB Scholarships, and some 300 more studied at workshops, seminars and summer sessions supported in part by the NAEB Workshop Grants-in-Aid mentioned above.

In other words, many of the NAEB's major efforts are now devoted to training: to the development of higher and higher standards, capabilities and education for those who are responsible for the operation of educational TV and radio facilities.

In this respect we are all "teachers" or part of a teaching function going on under the banner of an educational auspice, which we represent. And, to quote Frank G. Jennings in *Saturday Review*, "Teaching is a dangerous profession. It deals with our children, the most precious of our natural resources. It refines them into brave and wonderful adults or it grossly degrades them into dull, over-aged adolescents. Its results mold and determine the shape of our nation and the character of our people."

Perhaps, by dint of the effort to raise the standards of all educa-

tional broadcasters, we may help raise the standards that begin to be recognized as necessary also for commercial broadcasters. We feel that the movement which we represent, in part, will be built on people, not merely on dollars, or even on stations alone. Neither will it rise or fall on the basis of what is done in an office in Washington, New York, Ann Arbor or Urbana.

In the years ahead, and in subsequent years, we feel that foundation support, from which funds for much of the above type activity has come, will become less and less available. Therefore part of this year's meetings (notably the one on ETV instruction) was attempted on a self-supporting basis (with Purdue University). We believe this is a sound basis, and that members, more and more, will be willing to pay their own way for such essential seminars.

Perhaps we should say a word about how we see TV as an instructional tool. First of all we don't see it alone: we see it in relation to other tools and methods. Secondly, far from believing that TV should "do everything," we do and shall resist the use of ETV for any educationally irresponsible purposes.

Some of the wisest people in American education have serious reservations about the use of TV and radio for education. These people deserve to be heard, soberly and thoughtfully. And the uses we come up with should take into account the sincerity of purpose of leaders from all types of position and all sorts of organizations.

It won't be easy in the years ahead. But the vineyard is large. Fellow workers are welcomed. For meeting the educational problems of the years ahead, the NAEB humbly realizes the multiplicity of skills and tools which will be required. It seeks to insure that the contributions made in the name of the NAEB, at least, shall be characterized by integrity, humility and cooperation with the other educational agencies of the U. S.

We hope and trust that a century from now, in retrospect, it can be said of us all that we may have had our natural differences but that our common concerns as educators were too great to allow us to behave in any instance except as educators of integrity and principle; as gentlemen who respect each others' tools and intelligence as well as each others' special skills and sincere, selfless contributions to American Education.

WKAR-TV mobile unit used in production workshop. At center is president-elect William G. Harley.

#### ABOUT NAEB

*Founded in 1925 under the name of the Association of College and University Broadcasting Stations, the National Association of Educational Broadcasters (name changed in 1934) is the trade association of American educational, cultural, and public service radio and television stations, and the professional association representing the interests and needs of educational broadcasters.*

#### NAEB MEMBERSHIP

**ACTIVE MEMBERS** — 142 educational institutions and organizations owning and operating (or holding CP's for) a total of 147 educational radio and 34 educational television stations.

**ASSOCIATE MEMBERS** — 97 educational institutions and organizations producing educational radio and television programs independently or over commercial stations, or regularly operating closed-circuit television equipment for direct instructional purposes.

**AFFILIATE MEMBERS** — 62 other organizations interested in the general development of educational broadcasting.

**INDIVIDUAL MEMBERS** — more than 300.

**INDUSTRIAL ASSOCIATE MEMBERSHIPS** — any manufacturing firm engaged in the manufacture and/or sale of broadcasting and auxiliary equipment, wishing to further its cooperation with NAEB and wishing to foster educational broadcasting through the NAEB, may be elected an Industrial Associate.

**SUSTAINING MEMBERSHIP** — any individual, organization, or corporation, not qualifying as an Industrial Associate but wishing to foster educational broadcasting through the NAEB, may be elected to Sustaining Membership.

Emily S. Jones

Administrative Director

## EFLA — What Is It?

**S**INCE quiz shows are in disrepute at the moment, it should be emphasized immediately that no cash prizes will be offered to those who can answer the three questions given above. It would be difficult in any case, because EFLA, although long on activities and accomplishments, has always been short of cash. This is the result of being a completely independent, unsponsored organization — a state which guarantees freedom if not security.

EFLA's full title is Educational Film Library Association, Inc. With the possible exception of the last abbreviation, there is no part of this title which has not been misinterpreted by somebody. No, we don't limit our activities to classroom films. No, we don't handle X-ray, microfilm, or plastics. No, we don't have a film library. No, we are not a trade association of dealers. EFLA is a nonprofit, membership association of organizations and individuals concerned with the production, distribution, and utilization of films and other audiovisual materials. The Constituent Membership, which has voting rights, and from which the Board of Directors is elected, includes representatives of schools, colleges, public libraries, art galleries and museums, and organizations in the fields of health, mental health, religion, conservation, social service, labor, and others. Service Membership includes producers, distributors, and industrial organizations. There are also Personal Members.

Best known of EFLA's services is the Evaluation program. Probably more members have joined in order to get the Evaluation cards than for any other reason. During 1958 EFLA passed the 3500 mark in titles evaluated by its committees since the program started in 1946. All evaluating is done by volunteer committees which meet the standards and criteria established by EFLA. Members receive the new cards in groups of twenty or forty, eight times a year. An Index is published to all the back cards, and members can, and frequently do, order extra cards to serve as catalogs, accession cards, or various other uses. At the present time a new Index, including subject headings as well as titles for all cards issued since the beginning of the program, is being prepared and will be ready early in 1959.

Other EFLA publications are the *EFLA Bulletin*, *Film Review Digest*, and the *Service Supplements*. The *Bulletin* is the official newsletter and includes announcements, reviews, and lists

# What Has It Done? Where Is It Going?

of new films. The *Film Review Digest* was originally a separate periodical, but two years ago it was included in the membership service for Constituent and Service members. Starting in September, 1958, the *Film Review Digest* is being sent without extra charge to all EFLA members, including the Personal Members. It is published whenever the editor has accumulated three reviews from different sources for each of the twelve to fifteen films it takes to fill an issue. Members with orderly minds find this sporadic publishing schedule disturbing, but nothing can be done to improve it until more magazines publish more film reviews.

The *Service Supplements* are also somewhat irregular in appearance. Usually, four or five are issued during the membership year, covering such utilitarian topics as a membership list, an Index to Evaluations, or a Conference report, as well as less routine material. During 1958, the major Supplement was "Films and Filmstrips on Archaeology," which brought together information on a field which is of growing interest and importance. Supplements are sent EFLA members, and may be purchased by nonmembers.

EFLA has always worked closely with related organizations, and has been strongly in favor of cooperation rather than competition among the various audiovisual groups. For that reason, it was glad to take part in the formation of the Audiovisual Council on Public Information (AVCOPI) and has been an active participant in AVCOPI's program to improve understanding of the role of audiovisual education. For the past year, EFLA has provided office space and clerical help in New York to AVCOPI, and EFLA's Administrative Director has served as Secretary-Treasurer of the Council. EFLA has also worked with CINE (Committee on International Non-Theatrical Events) to nominate American films to be sent to film festivals abroad.

Conferences are naturally an important part of the program of any association. EFLA has held its Annual Conference usually in July in Chicago, just preceding the NAVA Trade Show. Recently, there have also been Regional Meetings in New York and elsewhere. The first Southern Regional Meeting was held in Tallahassee at Florida State University on November 6-8, 1958. Los Angeles was the site of a Western Regional Meeting in May, 1957, and another meeting may be held there in 1959. The EFLA Board

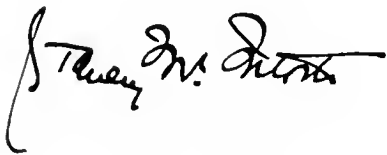

is working on a plan for a series of regional meetings to have correlated programs, as well as features of primarily regional interest.

Of major importance in EFLA's plans for 1959 is the new American Film Festival. Since the last Golden Reel showings, there has been no national educational film festival, and EFLA had been urged by both producers and users to undertake such a venture. After careful consideration, and with due regard for the criticisms which have been aimed at the Golden Reel and other festivals, the EFLA Board decided to establish a new American Film Festival, to cover 16mm films and 35mm filmstrips in the fields of education and information, religion and ethics, business and industry, health and medicine, and culture and art. Awards will be given in about thirty categories following screening during the Festival in New York, April 1-4, 1959.

Why have a Film Festival? It means a lot of work, and probably a lot of criticism from those who don't like the way it is run, or who disagree with the jurors' decisions. But a Festival can accomplish a great deal. It gives film users a chance to see a wide variety of films. It is a gathering place for film enthusiasts, where they can discuss all aspects of film making. And of course it is a place to meet fellow workers from all over the country, to make new acquaintances, and to talk shop. But the primary purpose of the American Film Festival is to encourage the improvement of educational and informational films by giving recognition to outstanding productions. For twelve years, EFLA has been rating and appraising films under the Evaluation program. That this has been a useful and needed service is proved by the continuous growth of EFLA membership. But the time has come to sharpen our critical judgment. Film users have a right to demand high quality in content, organization, technique, and approach. And producers who make high quality films should receive the honor they have earned. If, as a result, they also earn a little more money, it should encourage them to continue the good work. Then EFLA members and all other film users will benefit from higher standards in film production.

EFLA expects that 1959 will be one of the most important years in its history. The prospect ahead is exciting, if somewhat intimidating, but after all the vicissitudes of its past, EFLA is able to look forward hopefully, even to a Film Festival.

# An Anniversary for TFC

Executive Director

A scene from "Executive Interview," excerpt from M-G-M's "High Cost of Loving"

THE academic year 1958-59 marks the 20th anniversary of Teaching Film Custodians (TFC) in its joint work with schools and colleges on behalf of the companies of the theatrical motion picture industry.

The TFC Program functions to meet the social responsibility of the motion picture industry in the field of education by: (1) making available, to schools and colleges only, short films and excerpts selected as applicable for

teaching purposes, from the theatrical motion picture product; (2) providing limited grants of funds to state and national teaching-purpose groups for study, research, and consultant service in the application of the motion picture in prescribed courses of study, teaching processes, and in portraying the national culture at its best; (3) making available sets of still photographs from theatrical motion pictures which are studied in school in connection with literature, history, drama, and motion picture appreciation; (4) selecting, developing, and making available for teaching methods-experimentation certain motion pictures which are needed and requested for significant educational purposes, (a) which are not otherwise available, (b) which may develop improved teaching processes and tools, (c) which may create a new market, thereby attracting commercial producers to provide additional and improved motion pictures in given subject matter areas and levels where there were none.

The year 1957-58 has developed growth in the following educational services: (1) cooperation with the National Education Association in the Field and Consultant Service program under the auspices of the Department of Audio Visual Instruction; (2) cooperation with the Council on Cooperative College Projects in sessions at Virginia State College; (3) cooperation with the Lake Okoboji (Fourth) Educational Leadership Conference, under the auspices of the University of Iowa; (4) cooperation with the educational leaders in the state of North Dakota in state conferences, under the auspices of the State Department of Education and the North Dakota A & M College. During the coming year, 1959-60, these projects will be under consideration for further participation by TFC along with other projects being currently studied for submission to the Board of Directors in early 1959.

During the past year eleven excerpts, suspended from distribution in 1955, have been made available again, in addition to a number of new titles: *Something of Value*, 1 r, on prejudice and social attitudes; *Executive Interview*, 1 r, on business management and personnel; *Charles Dickens: Characters in Action*, 2 r, a study on Dickens; *Pioneer of Flight*, 2 r, on scientific attitude; and a color 1 reel excerpt on the teaching of faith in the Catholic schools, the title of which will be announced by the CAVE evaluation committee in January. Significant too, is the Yale University Press publication *Learning from Films*, by Mark A. May and others.

During the coming year, increased work will be developed through the national committees in English, social studies, and science, and the resulting film titles announced after proper reviewing and pretesting.

Specific excerpts related to *Ben Hur*, *The Fifth Amendment*, and Part V, *Land of Liberty*, are in progress. In addition, efforts will be made to determine how the motion picture script form may be made available to classes in the teaching of creative writing. Consideration is being made of film material for physics, reading, and foreign language.

**H**IGHPOINT of the year for members of the University Film Producers Association is the annual conference, held this year September 1-5 at the Game Lodge, Black Hills State Park, South Dakota. South Dakota State College was host to the 160 delegates.

Throughout the program, increasing concern with the problems of teaching production techniques was evident. Discussions of course content, teaching methods, academic program requirements, and screenings of student-made films were followed with great interest. Coming out of the attention given to this topic was the frequently voiced need for recruiting outstanding students into the field.

Ralph Steetle, Executive Director of the Joint Commission for Educational Television, was a featured speaker. Steetle described a recent trip to Moscow, and reported a visit to the Russian government-subsidized cinema school where 600 students take a six-year course to prepare them to produce educational and propaganda films and television programs as well as theatrical films.

Julien Bryan, Director, International Film Foundation, delivered the Kenneth Edwards Memorial Address. Stressing the need for training and encouraging prospective film-makers, Bryan challenged the UFPA to fill this need, and its individual members to strive for high standards of integrity, honesty, and imagination in their films.

For the past several years, the UFPA has participated in the International Congress of Schools of Cinema. Delegates have been sent to the organizational meeting, which has also been attended by representatives and observers from schools of cinema in Poland, Czechoslovakia, France, Soviet Russia, Italy, and Spain, as well as other countries in Europe, Africa, and South America. It was reported to the UFPA membership that these meetings have now culminated in the formation of the International Liaison Center of Motion Picture and Television Schools. This Center has as its purpose the improvement of techniques and professional quality in cinematography through increased effectiveness of student training. When officers for the International Liaison Center were elected, UFPA delegate Don Williams, Syracuse University, and the delegate from the

# University Film Producers Past—Present—Future

*Luella Snyder* Publicity Chairman

Soviet Union were named to share the office of vice-president.

Popular features of the UFPA annual conference are the evening screening and critiques of member-produced films and the exhibits and demonstrations of new equipment, materials, and processes which are presented by the sustaining members.

Elected for a two-year term as president of the organization was John Moriarty, Purdue University, succeeding O. S. Knudsen, Iowa State College. Other officers are Charles N. Hockman, University of Oklahoma, vice-president; Oscar "Pat" Patterson, University of California Extension, treasurer; and Daisy Sickles, Ohio State University, secretary.

Among the projects planned for the coming year are continued cooperation with the projects of the International Liaison Center, establishment of a clearing house of information about scholarships and fellowships available to students specializing in film production, revision and expansion of the nomenclature brochure which lists and defines terms commonly used in 16mm film production, and cooperation with the Committee on International Non-Theatrical Events in selecting university-made films to be sent to the various film festivals. Also continuing through the year will be the work of the Personnel, Curriculum, and Membership Committees.

UFPA members are already looking forward to the 12th Annual Conference which will be held the third week in August of 1959 on the Purdue University Campus. This is an open meeting and any-

one interested in the production of films by educational and other non-profit institutions is invited to attend. Information about program and housing can be obtained from John Moriarty, Director Audio-Visual Center, Purdue University, Lafayette, Indiana.

The University Film Producers Association has as its purpose the exchange of information and ideas about the production of educational and informational films by university film units, and the continuing up-grading of these units, their staffs, and the films produced. It is also concerned with the development and administration of effective academic programs in the field of film production.

Membership is open to any person actively engaged in film production, or in the teaching of film production, at a college or university. Those interested in the field but not actually engaged in film-making may become associate members. Companies which supply film equipment, materials, and services may become sustaining members. Descriptive brochure and membership application may be obtained from Frank Paine, Head, Educational Film Production, University of Mississippi, University, Mississippi.

The quarterly publication, the *UFPA Journal*, is edited by Robert Wagner, Head, Department of Cinema, University of Southern California, Los Angeles, California. Containing articles of general professional interest and news items about UFPA activities, the *Journal* is available to non members on a subscription basis. UFPA members receive it with their membership.

# AV in Christian Education

**T**HE integration of audiovisual materials into Christian Education curriculum is one of the focal concerns of the Department of AVBE of the National Council of Churches. The Fifteenth International Conference on Audio-Visual Christian Education centered on this theme. In the Conference and a National Executive Consultation preceding it there was great emphasis upon what is the curriculum of Christian education and the role of audiovisuals as an aid in communicating the curriculum.

In many of the denominations associated with the National Council of Churches considerable progress is being made in recommending audiovisual materials to local churches. The United Presbyterian Church in the U.S.A. is one of the leaders in this area. Other denominations such as the Methodist and United Lutheran are making considerable advances also. The new United Church of Christ (formed as a result of the union of the Congregational Christian and the Evangelic and Reformed Churches) is planning a subscription plan for audiovisual materials as part of a new curriculum to be introduced in 1962. There is much progress yet to be made, but as each denomination individually and together in the National Council of Churches studies basic curriculum design, audiovisuals have an important part in the study.

A second major concern is training and utilization of audiovisual materials. The major training being done is either through denominational facilities or state and local councils of churches. A strong trend is developing toward making audiovisual training an integral part of leadership training courses. There is still a considerable need for the specialized audiovisual training opportunities, but increasingly, the most effective training comes in leadership education courses and seminars. A specific instance of what is happening cooperatively among the denominations is a projected series of youth work institutes for the fall and winter of 1959-60 to train adult leaders of youth. As a part of these institutes, a new kit of filmstrips to aid in training adult leaders will be used. The audiovisual materials will be integrated into the total training program, so that the institutes will not be primarily an opportunity to introduce a set of filmstrips. A number of individual denominations have quite effective training programs, including

the Disciples of Christ and the Methodist Church, among many others. Several producers of materials for Christian education curriculum also hold training opportunities for local churches.

A major project of the Department is the Audio-Visual Resource Guide, the Fourth Edition of which is recently off the press. The Guide contains the evaluations of more than twenty-five hundred pieces of audiovisual material available for use in the churches. The response to the Guide—and an indication of its effectiveness—is seen in the fact that more than one-third of the printing run was sold before the date of publication.

To secure evaluations of such a large amount of material, fifty-five evaluation committees have been established from coast to coast. These committees meet monthly throughout the year, and involve more than one thousand people. Local churches, editors, film libraries, and councils of churches find the Guide to be the most helpful single piece of material to aid in the selection of audiovisual materials for use in the churches.

A projected innovation in the evaluation process is to use the material being evaluated in an actual use situation. This should give a much broader base to the evaluation process, and provide objective evaluations from those who will actually be the users of the material. A new edition of the Guide is published every two years, in order to keep it up to date. In the interim between editions, evaluations are kept current through publication in the *International Journal of Religious Education*. With a circulation of nearly fifty thousand, these monthly evaluations reach a large number of people in key positions in local church Christian education programs. The Rev. Donald Kliphardt carries responsibility for the Guide and the evaluation process.

A regular feature of the work of the Department is the holding of an International Conference on Audio-Visual Christian Education each year. Last August the fifteenth conference was held at Penn State University. An innovation was that of holding a National Executives Consultation, immediately prior to the Conference, which brought together the national leaders of audiovisuals in the churches, along with pro-

*Alva I. Cox, Jr.* Executive Director,

Department of Audio-Visual and Broadcast Education

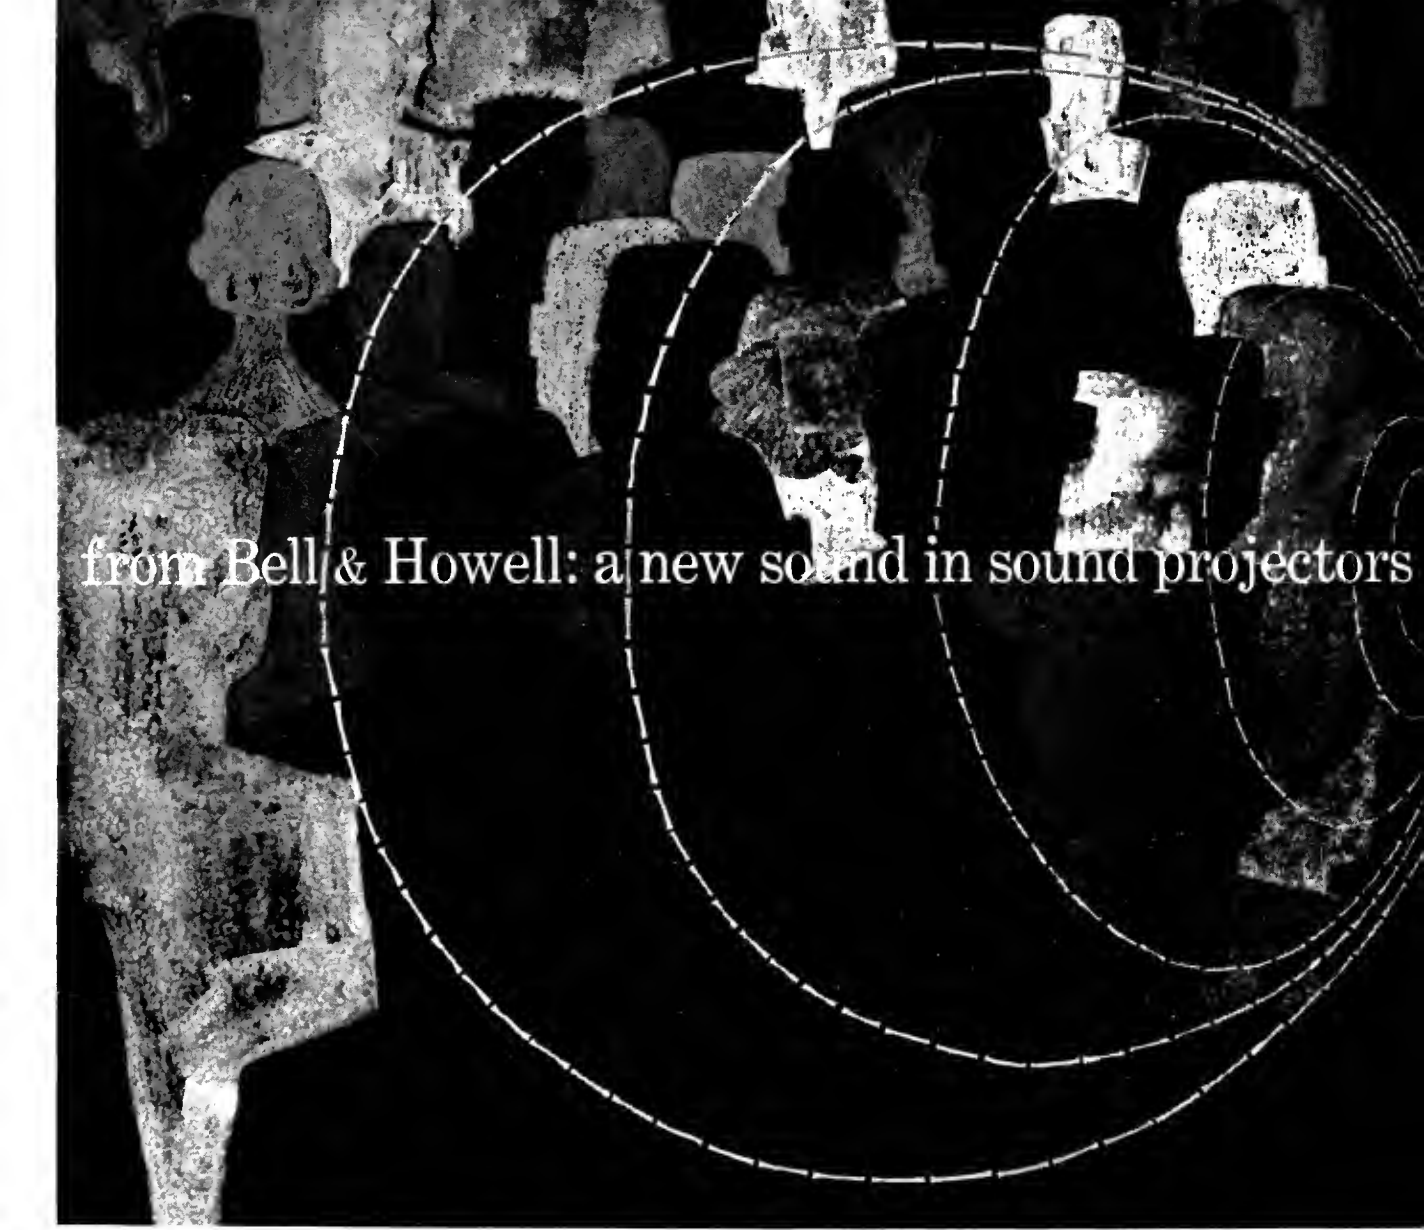

ducers and manufacturers, to consider problems which center on the national level. At the Penn State Consultation the focus, as indicated above, was the integration of audiovisuals in the design of the curriculum. Such basic considerations will become the focus of these consultations in future years. In 1959 the Conference and Consultation will be held concurrently in order that there shall be more communication between the national leadership and the local and regional leadership. The Conference is primarily designed for the latter group of people. The 1959 Conference and Consultation will have as their theme, "Improving Christian Communication," and will be held at Green Lake, Wisconsin, September 6-11, 1959.

A large part of the work of the Department is devoted to the Christian Education use of television. Plans are under way for a series of telecasts for children which will be an addition to the regular church school curriculum. Many local communities are developing their children's shows locally with the assistance and evaluation of the Department. The Department is also involved in the Columbia Broadcasting System television show aimed at unchurched youth, Look Up and Live, the winner in 1957 of both a Sylvania and an Ohio State award for excellence of programming. Special programs beamed to adults also have been undertaken, and others are projected for the future. A special four part treatment of gerontology was presented on the National Broadcasting Company series, Frontiers of Faith in September, 1958. The Department has also cooperated in developing materials for use in local churches to utilize a new series presented through the Broadcasting and Films Commission of the National Council, entitled Talkback. The churches are finding that there are excellent resources in television for enriching the adult Christian education curriculum.

The future? Much more needs to be done in several areas, all of which are being developed through the Department. Among these are the important areas of research into the role of visual material in Christian education curriculum, utilization of materials by local churches, and promotion of the idea of visual communication of the Christian faith through the program of Christian education.

*The Department of Audio-Visual and Broadcast Education of the National Council of Churches is a department in the Division of Christian Education. The National Council is an organization of thirty-three Protestant and Orthodox denominations working together in various fields. The Department is responsible for audiovisuals in the Christian education program of the National Council, and serves as a medium for the exchange of ideas among denominations. The work of the Department is directed by a Committee made up of denominational and state council of churches representatives as well as industry representatives at large. The chairman of the Committee is the Rev. George B. Ammon, Director of Audio-Visual Education for the United Lutheran Church. The staff of the Department includes the Rev. Donald Kliphardt, Mrs. Barbara Poppe, and the Rev. Alva I. Cox, Jr.*

from Bell & Howell: a new sound in sound projectors

a new clarity and richness for sharper communication  
... now yours with all Filmosound Specialists

Rugged Filmosound Specialists are sapphire jeweled, last 400', longer. Choice of 3 models, many features!

IT IS NOT ENOUGH that sound is heard . . . it must be *understood*. The *audio* must communicate as clearly as the *visual*, and that's why Pan-Harmonic sound makes an important contribution.

No single component accounts for the great improvement. It begins with Bell & Howell's sound-drum and exciter elements (microscopic tolerances for faultless "reading" of the sound track). It carries on through a high fidelity amplifier (balanced response

over the entire audible frequency spectrum). And it culminates in the new Pan-Harmonic speaker.

It is in this last stage—the speaker—that you see *visible* signs of innovation. For the speaker is now *integrated permanently into the projector case, facing forward to project sound forward*. A seemingly simple change, but far-reaching in its benefits.

Permanent mounting in the massive 7-ply paneling provides

# PAN-HARMONIC SOUND

enclosed baffling for the best reproduction of bass and lower middle ranges. This means much greater realism in speech, much greater enjoyment of musical sound tracks.

Further, the speaker's *new location* insures uniform dispersion of sound to the right and left sides of the audience, and the speaker at the same *height* as the projector lens insures no obstruction between the source of the sound and the audience.

Add to this the *convenience* of speedy set-up, no wires to string from projector to speaker, no messing with dusty wires when the show is over.

Thus, wherever portable sound projectors are normally used—in classrooms or other meeting places of 2,000 square feet or less—these new completely self-contained Filmosound Specialists offer remarkably improved communication and convenience. Of course, for large auditoriums and permanent installations your Bell & Howell audio-visual dealer will recommend the appropriate matched accessory speakers.

## CLOSE YOUR EYES AND SEE!

Ear test the quality of new Pan-Harmonic sound against other portable systems. Bell & Howell audio-visual dealers are now arranging demonstrations of all the Filmosound Specialists—Models 399EZ, 399 and 398. For your personal audition, call your nearest dealer, or write Bell & Howell, 7117 McCormick Rd., Chicago 45, Illinois.

by William S. Hockman

## Review and Forecast

Looking back over the past year, as requested by the Editor, is not easy. More difficult still is looking into the coming year. We shall take a whack at both, and if we miss let the reader be merciful and forgiving!

Let's look at the year just past in terms of events, materials and problems. In events, it was the Consultation at Penn State; in materials the ascendancy of the sound filmstrip; and in problems it is the same set we inherited from 1957.

## Events

While one of the seminar groups of the November 1957 meeting in Chicago of the Religious Education Association dealt vigorously with the problem of mass communication in the field of religion and examined the dominant images of God and man held up for public view, this seminar did not touch in a substantial way the central problem of the church A-V field — its lack of real intellectual and religious ballast. Bobbing cork-like for two decades because of shallow educational thinking and shoddy theology, the movement's little ship took on quite a load of educational insight and psychological theory at the Penn State consultation, thanks to professors native to that enormous campus. Taken aboard, also, at that time was a good deal of religious ballast in the form of provocative insight, thanks to Professor Campbell Wycoff, up from the Princeton Theological Seminary campus. If there is to be one regret over this Consultation, it is that those who most needed to hear these weighty and important discussions of educational theory and religion in relation to the mass media were somehow mostly absent — preoccupied with the lesser matters of ecclesiastical tinkering and book publishing.

Absent from the meeting, many of the church's leaders can catch us with

the AV procession via the findings from Penn State, and being occupationally conditioned to reading memoranda and findings, let it be hoped that they find the summary of Penn State to their liking so that it may redound to their profit. Important decisions in the next few years will reflect how well they do their reading.

The October meeting in Chicago of a few interested leaders from the church, from the production areas, and from the field of equipment, for a close look at the essential present characteristics of the *filmstrip as a medium*, may turn out to be a sizeable cloud with a lot of good rain in it. This, too, was a significant event. Long overdue, this candid examination of one of the AV media in terms of essential characteristics and potential in relation to the requirements of the church field may lead to other conferences on other media. Certainly the producer of material, the manufacturer of equipment, the distributor of both plus the user of both ought to be able to confer together profitably — unless they have waited too long; waited until the status quo is as hard as concrete.

## Materials

As late as 1950, who would have predicted the ascendancy of the sound filmstrip in the year 1958? To see how far and how fast this medium has come all one has to do is look back over the Green Lake Workshop "libraries." Few, indeed, would have predicted that in quality and quantity this past year would top all others in filmstrip production, and that upward of 90 percent of all new production would be in the sound variety.

What does this mean? First, it means that the producers thought the churches wanted this medium in that form. Perhaps the churches do. Now let them buy this material. After that, let them use it. In inherent quality it outclasses the quality and effectiveness of most of the utilization it will be given — but more on this point later.

Next, it means that the churches seem to have preferred this medium. If they have, it has been on the basis of hunches and not real guidance and conviction by those who should be "educating" the churches in AV matters. More on this in a later paragraph!

But, be all these things as they may, the material is here: let's get busy and use it. We have a job to do, and it can help us get on with the work. In using materials we shall gather some insight both into what we can use and ought to be asking the producers for.

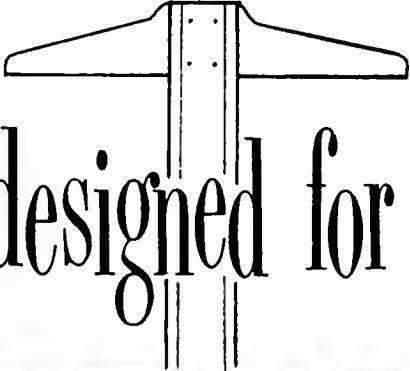

During the year a great volume of new materials has hit the church market. Cathedral Films, Inc. has stepped-up production; Family Filmstrips, Inc., has entered the field with a large initial output; and Eye-Gate House, Inc., has looked upon the church field and found the grass nice and green. All this means, in the economic context of American competition, that the consumer will not lack for product and that by and large the product will be of good and improving quality. Incidentally, we would like to see some one do a flanking movement and produce some high-utility filmstrips which exploit the essential *visualness* of this medium.

## Problems

Yes, we have problems! One of them is that our AV leaders don't see that we have them. These status-quo leaders are in themselves a very weighty problem, and never heavier than when they fail to consider the fact that each visual and auditory medium has its own essential character and power, which alone needs to be exploited to produce good visual and auditory materials. While cross-breeding has given us these so-called "audio-visuals" — which have certain attractive qualities and a fair amount of utility — we need *now* to turn back and evaluate each mass communication medium in terms of its essential and inherent worth.

(Continued on page 630)

## designed for religious education

### WHERE YOUR HEART IS

An excellent educational-inspirational film on dedication of life and talents to God and his work. A young church couple are confronted with the choice of buying a new car or making a more liberal contribution to their church's vital expansion program. (28 minutes, sound, black and white) \$9.00.

### A JOB OR A CALLING

The matter of vocational choice and doing the revealed will of God is presented in this film. It shows that service to other than self, using the talents God has given, is far more rewarding than devoting life solely to material gain. The subjects are a young married couple who choose between teaching or selling real estate. (28 minutes, sound, black and white) \$9.00.

### HOW TO VISIT

For leadership training groups. Shows correct procedures in visiting. (13 minutes, sound, black and white) \$4.00.

### MY CHURCH

Sets forth the objectives and background of the present-day church. (10 minutes, sound, color) \$5.00.

### HOW TO BE SAVED SERIES

Four color filmstrips that are designed to present the plan of salvation. In each, the plan of salvation is questioned either through words or deeds, then is explained simply and forcefully.

- A LOST PHARISEE—35 frames ..... BFS-121
- A LOST SOLDIER—44 frames ..... BFS-122
- A LOST CITY—39 frames ..... BFS-123
- A LOST JAILER—39 frames ..... BFS-124

### PERSONAL WITNESSING SERIES

Four filmstrips designed to present the need for and the results of personal witnessing by Christians.

- WITNESS IN SAMARIA—35 frames ..... BFS-125
- WITNESS TO AN ETHIOPIAN—40 frames BFS-126
- WITNESS TO THE WORLD—46 frames .. BFS-127
- WITNESS TO AGRIPPA—43 frames ..... BFS-128

### CHRISTIAN SERVICE SERIES

This series sets forth basic truths relating to effective Christian service as experienced and preached by Christians of New Testament days.

- POWER TO SERVE—44 frames ..... BFS-129
- MEN OF GOOD REPORT—33 frames ..... BFS-130
- SUCH AS I HAVE—41 frames ..... BFS-131
- CHOSEN VESSELS—39 frames ..... BFS-132

### TRIUMPHANT FAITH SERIES

Designed to help Christians live happily and triumphantly, this series of four color filmstrips deal with basic truths which can be understood and applied by every Christian.

- THIS THEY BELIEVED—42 frames ..... BFS-133
- IF GOD BE FOR US—43 frames ..... BFS-131
- CROWN OF RIGHTEOUSNESS—38 frames B-135
- FINDING GOD'S WILL—39 frames ..... BFS-136

*Each series contains four filmstrips in color (live photos), two 10-inch, 33 1/3 rpm records, and eight manuals (two for each filmstrip.) ... Each series, \$22.50 Individual filmstrips with two manuals... \$5.00 each Each record contains the narration for two filmstrips, for example, BR-121-122 contains narration for BFS-121 and 122. Each record, \$2.00. Additional film-strip manuals, 25c each.*

# CHURCH DEPARTMENT

(Continued from page 628)

And when we do this we shall get sharper educational tools and get them at less cost; and they will be easier for the lay teachers of our churches to use. This, then, is our first problem. Measured against the categorical objectives generally prevailing in the church's work, what is the potential of each of the visual and auditory media?

Another problem is that of leadership training! What an old and neglected term! Where are the leaders to train the people who will show the people in the local church how to do the job? The National Council of Churches has not done the job. If it left this work for the denominations, they have not done it, by and large. If the denominations left it to the local Councils of Churches, they too have failed. If the Councils have left it to the AV distributors, they have done a great deal—more than one would normally expect them to undertake since it is really the church's job by all logic and common sense. Thus, after several decades there is little new leadership at any level of the church, and some of the old leaders have gotten pretty tired!

This brings me to our third problem: the low quality of much of our utilization of audiovisual aids. Once we complained that we were handicapped by poor quality in our audio and visual aids. That alibi has been out of date for five years or more.

By and large we have developed no new techniques in the use of AV materials, and we have not refined many of the old ones. Here and there users have been creative; have gotten out of the deep rut of "showing" and telling, but they have not spread this new knowledge and know-how around very widely.

Even our colleges and universities and seminaries have done little to develop and refine utilization techniques. A quick look through the bibliography of dissertations and theses shows a preoccupation with TV; with radio as a second. Films and filmstrips, and the other media, get scant attention and most of what they do get is sophomoric and superficial. If we are to get out of this sahara of showing onto the fertile plains of utilization, some one must show the way.

Lastly, the church field is suffering from low-consumption. We are not using enough materials. We might learn more if we used more! Once we wanted to wait until the quality was better. Now it IS better. Why don't we use more? Our total usage is not up where it ought to be and it can be

upped by getting those who use little material to use more, and those who use none to using some. This is a promotion job. It's work for all of us, basically: for the church, for the producer, for the dealer. Let's get on with the job!

## Forecast

When we turn to this, the grade gets steeper, and a writer travels at his own risk, and, perhaps, to the amusement of his readers. At any rate, the Editor used that word in his directive, so here goes!

In the year ahead we believe that attention will veer from the filmstrip over to the film; to the short motion picture which has a high educational potential. By short, we mean under 15 minutes, and even on down to eight or ten minutes. Production, processing, and distribution problems will need to be met, but technological progress may give the church a high-potential film that it can buy, not rent. This year? Perhaps not this year, but attention will swing in that direction.

Again, we shall continue to see the filmstrip appraised and improved as a medium. It's in the wood! Here is a medium which can become the work-horse in putting projected still material into the classroom provided—a number of things! These things will occupy the attention of more and more people this next year.

This year we shall move closer to a new type of Biblical film: the imaginative and psychological penetration of the meaning of events and materials. While there will still be considerable preoccupation with the externals, this new approach to biblical material will get under way. To illustrate: we will not dress up some characters and ask them to walk through the dramatic action of the *Book of Ruth*. This we have done—well in some instances, not so good in others. The new film will give visual and auditory form to what the *Book of Ruth* said when written and *can say* to us now. (The Easter film of the NCC in 1959 has some of the qualities of this treatment and approach. Watch for it: *The Power of The Resurrection*.)

Lastly, curriculum builders will begin to give serious consideration to real AV integration. The "parsley concept" will give way to something more substantial, honest, and creative. These brave builders of the newer curricula will have the wisdom to commit chunks of the total body of material into various kinds of formats and media (in addition to printed pages). When this is done, let us hope that they will leave the translation from

the verbal to the visual form to those skilled in this process and not turn it over to those skilled only in book and magazine construction and editing. Domestication of such production may tend to be better economics, but if quality is wanted, and it ought to be, there is just one place to get it: from those specialized in AV production.

Lastly, despite appearances, we are not on a very wide plateau of AV development. How could that be? There will be an up-turn. This is the atomic era! More must be done better in less time, and that calls for the best kind of materials. Of all the gateways to the mind, sight and sound are first and second in importance. The future will bring more, not less, employment of these two gateways. And, on this note our forecast ends. —WSH

## The O.T. Prophets Series

Cathedral Films, Inc. has just completed and released its *Story of the Prophets* series of six filmstrips in full color art-work and with LP recorded commentaries. The running time for each is about 17 minutes with close to fifty frames each. The commentary carries the words of a narrator and at certain times the words of the prophet under study. While the art is all by the same artist, the narration is spoken by several different voices, with considerable difference in quality and effectiveness.

Taken as a whole, this is a good and useful series for young people and adults—in church, synagogue, college and even in the seminary. With each there is a helpful teacher's study guide and manual. The six sides of three records carry the six commentaries.

The series opens with an introductory filmstrip, *Frontiersmen of Faith*. It brings the O.T. prophets into focus quickly, and then moves on from one to the other. This prologue is an excellent overview and should always be used to start the series.

*Amos: God's Angry Man* presents the times and the work of the Shepherd of Tekoa, preacher of doom and judgment at Bethel. *Hosea: Prophet of God's Love* tells of Hosea and his wife Gomer, and out of this unhappy marriage Hosea frames his message for Israel.

*Micah: Prophet of the Common Man* is brought before us in vivid images and strong words and a not-to-be-forgotten summary of what God requires. The series concludes with Isaiah—*The Vision of Isaiah*, and *Isaiah: Statesman for God*. The first presents his vision and call, and the

second his preaching in the crises which plagued his people and their rulers across many years.

A commendable effort; a good and useful series! Six filmstrips and the three records, boxed and with guides, \$40.50 complete; from Cathedral Films or through AV dealers.

## Good and Useful

That I should find most of the filmstrips of the Union of American Hebrew Congregations (UAHC) displayed in a synagogue where I was invited to speak to its teachers did not surprise me as much as it pleased, I was both more pleased and more than a little surprised to find many of these same filmstrips in the library of a church.

"How is it," I asked, "that you have here so many filmstrips which have been produced by the UAHC?"

"We believe that our children need to know about their neighbors; need to know how they worship, and think; need to become acquainted with their great leaders; and, ought to understand some of the problems they face in living in America and the world." Could I ask for a finer statement! Here, indeed, was an alert and perceptive young minister.

And this is exactly the context in which I draw your attention to four new filmstrips by the UAHC. Produced under the watchful eye of Dr. Samuel Grand, these filmstrips have good content and technical qualities and great usefulness in synagogue and school.

Part One, *Jews In Distant Lands*, takes us to Iran, Afghanistan, and Thailand. The time is recent — 1957 and '58. The purpose of our visit is to meet Jews in some of the cities, to see them at work, and at worship, and serving their communities — as Dr. Jacobson, refugee from the Nazis, so well does in Bangkok with his eye hospital.

In Part Two, *Jews In Distant Lands*, we visit Singapore, Hong Kong, and Indonesia, meeting prominent residents of the Jewish communities, and learning of their contributions as men of the professions and business. In each of these the color photography

and the reading script are by Chaim Teitler. Each had 40-some frames.

*Hillel: Teacher of Love*, in 34 frames of full color art, tells of the life and work of the great Hillel of Jerusalem, a contemporary of Jesus, without doubt one of the teachers of Saul of Tarsus, and opponent of Shammai in many disputes concerning the Law. Useful in church, college, and seminary in presenting a summary of the life and work of a leader of the Jews in the time of Jesus and Paul.

If you are looking for a description of how your Jewish neighbors observe the festival of harvest and joy, the 42-frame filmstrip, *Sukos and Simchas Torah*, is suitable and useful for use with primary and Junior children. (How Jesus and his family may have celebrated this same festival is presented in the 23-frame color filmstrip, from SVE, *Thanksgiving With Jesus*). Each UAHC filmstrip, plus two carefully prepared teachers' manuals, is \$7.50.

## Film Notes

For most adults an informative film with good technical qualities will be entertaining, and *Why the Kremlin Hates Bananas* is just such a film. Long the target of Red smears, the United Fruit Company answers with education via the Pan-American

School of Agriculture. Beautifully photographed, interestingly narrated by an expert, here is a film (11½ minutes) for your fellowship groups when entertainment is to be seasoned with information. Free from Association Films, Ridgefield, N. J.

*To Your Health* is a "fast-moving, color cartoon film presenting a concise summary of basic scientific information about alcohol and alcoholism." Plus scientific facts on alcohol, it suggests some of the reasons why people drink, how the alcoholic gets that way, and something of the dimensions of his problem. Produced for the World Health Organization, with Dr. E. M. Jellinek supervising, it reflects Dr. Jellinek's slants and biases. With a running time of 11 minutes, it is useful with Junior Hi youth and up to give information and motivate discussion, investigation, and reading. Rent (\$5.00) from any of the Methodist film outlets across the country. Recommended.

Most church bulletin boards are unimaginative, uncreative, uncommunicative and drab. How church leaders need to see that fine film, *Bulletin Boards: An Effective Teaching Device*. In eleven minutes it shows how to bring this communication medium alive. (From Bailey Films Inc., 6509 DeLongpre Ave., Hollywood 28, Calif.)

# WHEELIT - 49 to 1 Choice

-of California  
audio-visual  
co-ordinators

The non-folding WHEELIT No. 4102 does a remarkable job of solving the transportation problem for audio-visual equipment in a rapidly growing number of the nation's schools and colleges.

Answering a questionnaire after a demonstration of competing equipment, 49 out of the 50 co-ordinators present in California gave WHEELIT the nod over all other makes.

Asked to state their reasons in detail, these co-ordinators cited the saving on heavy lifting and fatiguing carries, the exceptionally easy steering, large Formica top wooden platforms, sound absorption and lack of vibration. WHEELIT is your first choice too!

All-steel construction (except platforms) . . . Precision workmanship . . . accurate assembly . . . ease of maneuvering and smooth, efficient operation characterize all WHEELITS . . . made both in non-folding, and folding models for interior, or car and outside purposes. Heavy straps secure all loads.

# Sound Advice

about audio materials

and equipment

---

## TEN YEARS AFTER

Ten years ago both RCA Victor and Columbia introduced microgroove recordings to the public and to schools. At the time it was thought that the 78 rpm record would live forever and that every release would be available at that speed. And today, ten years after, the microgroove recording is standard and the old style 78 rpm recording has all but disappeared. Indeed, old recordings are becoming collector's items.

In fact, they are no longer generally manufactured. They can be made on special order but reissues of older titles first presented at 78 rpm are almost invariably on microgroove discs.

And looking ahead a little bit—stereophony is becoming popular for home and for some school applications, readings of complete books are now available at 16.7 rpm and experimentation with a turntable speed of 8.3 rpm is well advanced.

Ten years of microgroove recordings has changed and revitalized an industry. This technological progress is manifesting itself in instructional progress because more and better recordings are now available for instructional applications than has ever been the case in the past. New releases thus far this school year involve the social studies, languages, literature and both music appreciation and music instruction.

The quality of recordings is vastly improved, as is the variety of materials available. Sound recording is better and has led the development of better sound reproducing equipment. Public interest in "hi-fi" attests this. The new records last longer. Broken and chipped records are no longer a problem. The lightweight jewel-tipped pick-up arm means longer record life than was considered possible in the days of the heavy arm and the well remembered shadowgraphed steel needle, which had to be changed after every playing.

The recording industry has been reborn in these ten years. And, appropriately, through this decade our schools have been equipped with new, modern record players.

Ten years ago some of today's most important producers of instructional records were unknown and probably unplanned. A few such companies well known today in school and library circles but unheard of ten years ago are *Caedmon*, with their exceptional catalogue of recordings in spoken English, languages, history and other non-musical areas; *Spoken Arts*, with a similar but not parallel catalogue; *Spoken Word*, which has brought many memorable recordings into being, not the least of which are their current series of complete Shakespearean plays performed by the Gate Theatre Players of Dublin and their exceptional "Of Many Things" featuring Bergen Evans, and *Enrichment Materials*, which has produced an important series of instructional recordings based on the Random House Landmark Books and has more recently entered into the field of film-strip preparation and production. There are others, too. For instance, *Star*, *Poetry*, *Wilmac*, *Lexington*, *Cabot*, *Audio Book*, *Libraphone*, *Word* and literally dozens of other companies which followed upon the development of the microgroove recording and which offer new instructional horizons to the alert teacher and administrator.

The fact that the public and the schools have accepted this post-war change and adapted to it is demonstrated by the lack of old style records in local record shops. We doubt that there is a multi-roomed school in the country equipped solely with 78 rpm record players. Certainly, if such exists, it cannot be using all the modern instructional materials.

The long-playing record has brought about changes in instruction which are blossoming anew each year. Many teacher guides designed to accompany

textbooks list records which can be employed either to hasten or to broaden learning. The curriculum materials lists of any school or college are outdated—but fortunately not hopelessly.

Many teachers are behind the times and have failed to take advantage of these materials. The flood has been too great and ways must be found to inform them. Teachers are not unwilling to use these proven new materials, but they must become better informed concerning their potential and availability.

The year 1958 has brought forth a considerable number of exceptional, school-worthy recordings. Many are of interest to teachers of literature. Others may be used in instruction in the social studies and the foreign languages. The year 1958, too, saw the entry into the record field of another book company, Harcourt, Brace. They join Ginn and Company, D. C. Heath, Scott, Foresman and many other companies in this field.

In the past few months there has been a notable increase in the number of foreign imports in the instructional record field. These are essentially in the area of language instruction and extend into the area of foreign national literature.

Foreign languages are dominant at the moment. The National Defense Education Act of 1958 has spurred this and there is tremendous interest today in the "aural-oral" approach to foreign language instruction, much of which has been generated in the past twelve months.

The spread of the "language laboratory" idea is a driving force. According to a recently released survey made by the U. S. Office of Education ("Resources for Foreign Language Teaching") there are 214 college and university laboratories functioning in 41 states and 47 high school installations in 20 states. Even more important is the information given us just a few days ago that interest in this development is "sky high." In fact, we were told, deliveries and installations rather than orders represent the major problem. There is a shortage of adequate materials for these installations and many instructors are relying on "home-made" recordings for this type of instruction. And, other than language teachers are recognizing the potential contributions of this highly intimate communications device and laboratories are being scheduled for use by instructors in the humanities, the arts and the sciences.

An important but as yet undeveloped area involves the rapid spread of language instruction in the elementary schools. We anticipate that within the next few years this will become a

major factor in the recording industry where schools are concerned.

The emphasis in the elementary school appropriately is on the aural-oral (listening and speaking) accomplishments with or without reference to or reliance upon visual understanding and communication (reading and writing). The existing gap in our instructional materials library is recognized by major and minor producers alike who are carefully investigating this area with a view to producing elementary school useful recordings, perhaps accompanied by filmstrips, thus encouraging picture reading and word association.

All the producers working in this area recognize the urgent need for supplying worthwhile examples of good speech patterns to the youngest children before personal speech habits limit or bar good foreign language oral communication. To this end each seeks superior examples of pronunciation and enunciation, demonstrated by men and women, to set before students.

*Ottenheimer:* Publishers of Baltimore are already in this field. Their "French for Children," "German for Children," "Spanish for Children," and "Italian for Children" were published about a year ago. Then there is "French for the Younger Set" published under the *University Associated* label, and others. And there will be

more in the near future. *Wilmac* of Pasadena is, we are told, working closely with school personnel from that area in the development of specialized materials for this group. And others, too, are closely studying the potential of this market.

Record distribution, too, has seen some beginnings of changes these past few months. There have been discussions of establishing educational dealerships in records to serve the needs of schools. These dealers would carry highly specialized educational catalogues and probably would serve areas in which they would have exclusive sales rights.

"The Union" and "The Confederacy" have been on the general market and available to schools for many months. Yet *Columbia*, in order to more closely examine the school market, recently offered these two titles by direct mail to their educational mailing list. We are told that the response has been most encouraging and we shall be very much surprised if this practice is not considerably expanded. We anticipate that there will be new and repeated offers of recordings by direct mail not only by the "big three" but also by some of the smaller producers.

Of course, *Enrichment Materials* has long used direct mail advertising to develop a market for their product. And their success has been such that

this year, for the first time, eight new titles were placed on the market instead of the usual four.

Purchasing records by mail from specialty houses is not new to schools. But leaders in the field like the *Children's Music Center*, *Children's Reading Service*, *Bowmar*, *Educational Audio-Video* and others from coast-to-coast each year issue expanded record catalogues indicating an expanding competitive market.

There are distant, indistinct rumblings of movement into the record field by major educational film producers like *Coronet*, *McGraw Hill* and *Encyclopaedia Britannica*. Which will be the first to move we do not know, but we believe that all three may shortly become major factors in this field.

*Coronet* is without experience in this area. *Encyclopaedia Britannica Films* is already a minor publisher in this area with their "Fun With Speech," "Historical America in Song," "Great Literature" children's stories and foreign language recordings. Similarly, *McGraw Hill* is a record publisher and distributor. They entered the field when they undertook the distribution of all Popular Science materials including records and filmstrips.

Neither of the latter companies has made an intensive effort to sell these particular products, but they are listed

From now until Jan. 15,  
Audiotape offers a ...

Free Christmas  
Bonus

FOR ALL TAPE  
RECORDISTS

A 1200-foot reel of Audiotape on super-strong  
1½-mil Mylar\* is your free bonus with every purchase  
of four 7" reels of any type of Audiotape

That's right! Audio Devices is offering a Christmas bonus to all tape fans. To get you acquainted with strong, durable Audiotape on 1½-mil "Mylar," we are offering a 1200-foot reel (list price: \$6.65) with every purchase of four 7" reels of any of the eight types of Audiotape. OR you get a free 600-foot reel with every two 7" reels you buy. OR a free 600-foot reel with every four 5" reels you buy.

This is your opportunity to give yourself an unexpected Christmas present—a free reel of the toughest, longest lasting Audiotape ever made, *perfect for those precious holiday recordings*. Better buy now—this Christmas Bonus Offer lasts only until Jan. 15, 1959.

AN IDEAL CHRISTMAS GIFT. Audiotape is one of the most thoughtful, unique and enduring Christmas gifts possible. And now you can give five reels at the cost of just four. Remember, when you give Audiotape, you're giving the truly professional quality recording tape.

AUDIO DEVICES, INC., 444 Madison Ave., New York 22, N.Y.

in catalogues and presumably their dealers and representatives are familiar with them. Practically from the catalogue listings alone sufficient demand is created for these records to continue them. Sales are slow but steady, despite the lack of systematic promotion which would include intense efforts to introduce these materials to teachers and administrators. In view of this residual, but important, interest (and all the records were originally recorded some years ago—in fact practically all are 78 rpm issues) the advisability of expansion into this area is being seriously debated by these companies.

The year in retrospect perhaps is typified by the adoption of the micro-groove record ten years ago. Just as the public "made the switch," so did the schools but perhaps at a slower pace. Just as the public recognized the multiple values of the microgroove record, so did the schools. And each year the record is growing in importance as a tool of instruction.

As we increase the load on the student and on the teacher to handle successfully more information and new skills from day to day and from year to year, the availability of instructional materials must be expanded—and information concerning them must be presented to all who can use them profitably.

## FILMSTRIPS IN THE YEAR AHEAD

Inasmuch as this is only my third month as filmstrip editor for this magazine, I have but a short past to look back upon. This is rather nice, too, for there is a minimum of mistakes to regret and a minimum of trials and tribulations to growl about. My past, however, has been literally filled with experiences dealing with filmstrips, and it is out of this past experience that I hope to do some things with the material of this column. Let me tell you a few of my hopes:

First and foremost I hope that in the year ahead we may achieve one goal dear to my heart, to wit: arrival at a point where we can say that all teachers selecting filmstrips for classroom use do so because they believe the medium to be one they want to use and the particular filmstrip one which presents a story they can really use to stimulate pupil interest—and not because they were unable to get a motion picture! I have nothing against motion pictures. Let me hasten to say that I highly approve of them, and would be lost without them. But I do think it is time we realized that the *filmstrip is not a substitute for films* (or for anything else, for that matter). Substitute implies something you use only when you can't get the real thing, and I assure you a filmstrip is no substitute—it is the real thing in itself and can stand on its own feet against any contender for honors, IF . . .

And here is my second hope: arrival at a point where we may report to you that everyone is *using* filmstrips and not just *showing* them. This means two things: (1) everyone is using filmstrips when they contribute to a particular lesson, and (2) everyone is using an ounce or so of common sense in the way they incorporate the filmstrip into a presentation. If we can only arrive at the time when part of a filmstrip is used one day, and the

rest at such time as it really fits a need I'll settle for mission accomplished!

I have a third hope that is slightly difficult to put into the words I really want to say. It concerns production. The quality of production has reached a peak, if by that we mean only technical quality such as good color rendition, clear pictures, etc. I could wish that the spark of originality or creativity burned a bit brighter sometimes when we consider story quality. I know all about the trials of making material match dillering curriculums, and I admit there is a problem to be met. Perhaps we need a catalyst, and for that purpose I nominate for a new approach to curriculum, the viewpoint of the one most concerned—the pupil. I wonder what would happen if we sometimes brought the pupil into the production picture a bit earlier. After all, you know, we are always saying that the initial step in the educational process is the capturing of pupil interest. As producers, adults are a few years beyond the current viewpoint of the person for whom they are producing material. Perhaps the results would be better for all concerned if the level of interest really represented pupil needs. Again perhaps I can report progress on this front a year from now!

Lastly, I should like to have a group of pupil evaluators help me write some of the reviews for this column. In writing reviews I have always tried to secure as many opinions and reactions as possible with which to "bolster" my own opinions. At any rate, I intend to try for some possible innovations along these lines. It may take a bit of planning, but we can always try!

The reviews are intended to be helpful as well as merely informative. My own very personal peeve is a review which gives only title and price. Most producers indicate a grade level for which their material is intended. This matter of grade adaptability is another problem. If, as a reviewer, I see

possibilities for use at other levels, I think this should be indicated, and will try to do so. The curriculum is changing and we should keep pace by adapting materials to changing needs.

Now to show you that I mean to try to make this column a useful source of information, let me tell you about a few filmstrips which have interested me. Because they did interest me, I hope you like them.

### UNESCO FABLES

(Color, single filmstrip; produced by and available from UNESCO Publications Center, 801 Third Ave., New York 22, N. Y.; \$1.50 with manual commentary.) Three fables on one strip. Three stories (without captions, for the content is told in a manual), which may be adapted to illustrate why the qualities of kindness, warmth, unity and strength are so essential today and why mutual self-help is essential in both personal and international affairs. This is an interesting filmstrip to use with children and allows for considerable experimentation in the way of narration, discussion and story telling. The pictures are simple, but the message is weighty. I'd like to try this strip with a fourth grade and with a seventh or tenth grade. We might be surprised at the results. At least it's a new approach to international understanding.

### MINERALS ON PARADE

(Color. 3 strips; produced by Sweetman Productions, Walnut Hill Road, Bethel, Conn., \$24 per set with text booklet.) In this set color photographs supply us with the story of minerals and examples of the common minerals that can be found and identified in most locations. The producer wrote me that "he became involved in this subject through his son, aged 11 and his interest in minerals." This made me remember how often I too had watched children coming to see the minerals in one of our museums, and how great had been the degree of interest. This filmstrip series is a good one to use in stimulating such interest, and will prove helpful in supplying information for young scientists, hobbyists and budding mineralogists.

# Evaluation of new films

CAROLYN GUSS

Associate Professor, School of Education  
Indiana University

## EDUCATIONAL MOTION PICTURES IN REVIEW

Charles F. Hoban, Jr., and Edward B. van Ormer, in concluding their report *Instructional Film Research 1918-1950*, present a series of principles which appear to govern the influence of films. They state that "although these principles may be widely known and accepted (or perhaps disagreed with, in some cases) they are often overlooked in the planning, production, and use of motion pictures." An analysis of the films reviewed by Staff members of the Audio-Visual Center of Indiana University during 1958 in "Evaluation of New Films" appearing monthly in this magazine reveals that those principles which deal primarily with film content and treatment—visual primacy, specificity, relevance, subjectivity, rate of development, reinforcement, and instructional variables—were not completely overlooked by producers or reviewers. The application of these principles and recogni-

tion of them by reviewers are evidenced by the following selected references to specific films reviewed during 1958. Readers may wish to supplement these brief excerpts by referring to the more detailed descriptions and analyses appearing in the monthly issue indicated along with the producer in parentheses after each title.

**Visual Primacy.** Clear and simple visualization of the more important ideas is preferable to "slick" production techniques. The review of *Six-Seven-, and Eight-Year-Olds—Society of Children* (Vassar College production distributed by New York University, February) indicates that the committee felt that here was an excellent presentation of results obtained by "cavesdropping with a camera and a sound recorder" on groups of children and that the spontaneous and unrehearsed atmosphere of the film was gratifying, interesting, and revealing.

Similarly, in *The Constitution and the Employer* (Center of Mass Communication of Columbia University, distributed by National Educational Television Film Service, January), the previewing committee saw a sincere effort in portraying the significant and essential relationships between the

American Constitution, the legislature, the judiciary, and the citizens. The presence in the film of Mr. Darby himself, his attorneys, and Attorney General Biddle, along with location shots of the lumber company in operation infuse the treatment with that authenticity which invariably characterizes sincere attempts of men to come to grips with their world.

A third and final example from the many others which illustrate that simple, unadorned film techniques can result in effective films is *Music from Oil Drums* (Folkways Records and Services, June). The reviewer indicated that the enthusiasm of the performers and the genuine interest of the narrator provide an authentic educational and motivational film, and that although the technical quality of the film is not of professional standards, it does not distract from the vitality and spontaneity of the film story.

**Specificity.** This principle implies that the producer should define in specific terms the audience and purposes. *Chaucer's England with a Special Presentation of the Pardoner's Tale* (Encyclopaedia Britannica Films, May) does precisely this. The evaluating committee highly recommended it for senior high school and college English literature classes. Filmed in England, shots of the English countryside, the spires of Canterbury Cathedral, stained glass cathedral windows, and illuminated manuscripts provide groups with valuable experiences related to understanding the "Tales" and life in England.

*Adelie Penguins of the Antarctic* (McGraw-Hill Book Co., July) is a second example of a film dealing with a very specific subject for a special-interest group. This film production evidences a producer-distributor's faith in the user's interest in using films with specific content for specific purposes. This film—actually part of a doctoral thesis—is the first record of the life history of the penguin. It shows the constant struggle for survival, the menace of the ever-present enemies of the penguin, the struggle with the rigors of the climate, and the competition among the penguins themselves.

Relevance. The film content should

**FORSE MANUFACTURING COMPANY**  
2347 Sullivan Ave. • St. Louis 7, Mo.

be related to the expected behavioral outcomes. For example, a film dealing with the social applications of arithmetic could hardly be expected to help a class improve their skill in arithmetic computation. This principle directly relates to the selection of films for teaching purposes, but should also be noted by producers in connection with their statement of purposes for their films. Such a film as *Is There Communication When You Speak?* (McGraw-Hill Book Company, April) which describes simply, but without serious distortion, the constituents of the communication process and the conditions and requirements for effective communication, may reasonably be expected to serve not only to cultivate more effective speech and communications behavior but also to impress the audience with the fundamental nature of a process in which everyone is almost continually involved.

**Subjectivity.** Research seems to indicate that learning is facilitated when the film content is subjective for the audience or when the audience is involved in the film action. *El Cumpleaños De Pepita.* (International Film Bureau, May), a Spanish language film, by interspersing the scenes of preparation for a surprise birthday party with scenes of Pepita as she is on the island, encourages the viewers to share the suspense and excitement.

**Rate of Development.** Producers of educational films as well as users should be aware of the fact that research evidence indicates that a slower rate of film development is generally superior to a more rapid rate. According to this principal *The Human Body: The Digestive System* (Coronet Instructional Films, May) should gain instructional effectiveness because, as our review indicates, the repetition of facts with different visuals re-emphasizes the important points and, in addition; provides "breathers" for collection of thoughts before proceeding to new material.

**Reinforcement.** Research has shown that films are effective in reinforcing or strengthening ideas already held by the audience. Reviews of several films during the year have pointed to this principle. For example, the review of *Russia* (Julien Bryan, International Film Foundation, October) states that "anyone seeing the film may find either revelation or confirmation. It is more likely that he will find both."

**Instructional Variables.** Hoban and van Ormer report that such instructional variables in films as orientation of the audience, repetition, informing

the learner about how much he has learned, check-ups or tests, and audience participation also affect learning. In *Country of Islam* (Churchill-Wexler Film Productions, April), for example, it is expected that students will identify themselves with Mostafa and by empathy, share his environment, activities and problems; to the extent that this occurs, attitudes of understanding and appreciation concerning the welfare of an underprivileged and struggling people will be evoked.

Facts concerning the moon and the earth which might in some educational environments seem to have little or no immediate point of contact with intermediate-grade pupils' interests occur in the film *A Trip to the Moon* (Encyclopaedia Britannica Films, April) and its imaginary trip into space immediately involves the pupils.

**Conclusion.** The reviews of the forty-one films included in "Evaluation of New Films" in *Educational Screen and Audio-Visual Guide* during 1958 bring to 733 the total of reviews prepared by staff members of the Audio-Visual Center of Indiana University since they assumed responsibility for the department in 1940. In addition to the above film elements, a comparison of the films reviewed during the year just ending with those reviewed in the first year of Indiana University's activities reveals some distinguishable trends in educational film production. Users frequently now have a choice of the film title in either black and white or color. The average running time is now somewhat longer than it was ten to fifteen years ago—the average length of films reviewed in 1958 being approximately twenty minutes. There are many new producers—only a few of the producers having films reviewed during 1958 were producing films fifteen years ago. Among the newer sources of educational films are producers and distributors of films produced for television purposes or from telecasts. Compared to earlier films the more recently produced films are more specific both in terms of purposes and intended audience.

As Neal Miller emphasizes in *Graphic Communication and the Crisis in Education*, there is a need for increased discrimination with reference to the various factors in graphic communication media that influence audience behavior. This discussion of 1958 film reviews, it is hoped, has singled out for consideration some of these characteristics and will help to alert film producers and users to the importance of such learning factors as drive (motivation), cue (stimulus), response (participation), and reward (reinforcement).

## NEW EQUIPMENT

### CAMERAS, Movie, TV

**Automatic TV Camera**, completely self-contained, for installations involving dangerous, hard to reach locations which must be observed from one or more monitor stations. Automatically accommodates 120 to 1 light range (equivalent in camera lens stops from f/1.5 to f/1.6), with 50% range in video output level. Automatically self-adjusts beam, target and electrical circuits to optimum value. Wt. 10 lb. Model 63A. DAGE.

For more information circle 101 on coupon

### CAMERAS, Still

Bell & Howell "Electric Eye" Camera

**"Infallible" Electric Eye Camera**, uses 127 film for color or monochrome snapshots and 2x2 slides. Photo cell sets lens opening automatically; traffic lights in viewfinder signal whether there is enough light to take the picture on the type of film for which camera is set; universal focus lens; double exposure guard; weighs 24 ounces. With harmonizing flash gun and carrying case, \$79.95. BELL & HOWELL.

For more information circle 102 on coupon

### CAMERA ACCESSORIES

**Accura Panomat**, an automatic panning unit that fits a tripod head and at turn of handle produces slow, steady pan. \$3.95. **Accura Kino-Fader** has two polarizing filters to fade out 8mm or 16mm cameras; C and V series threads

adapt it to most lenses; fader handle is detachable to avoid interference when mounted on turret cameras. Complete with leather case \$9.95. PIDC.

For more information circle 103 on coupon

### PROJECTORS, Movie, TV

**"Teclite" 16mm Sound Motion Picture Projector**. Latest in TSI line, newly designed lightweight model (less than 30 lb.); compact single-case; detachable 8" speaker; 15-watt AC-DC amplifier; 2-speed and reverse; cooling for 1200-watt lamp. TSI.

For more information circle 104 on coupon

Harwald "Ulramatic" Sound Projector

**"Ulramatic" fully-encased 16mm sound projector**. Self-contained combination, projector, cabinet, screen, films, speaker and cord, tamper-proof, noiseless, fitted with large casters to permit ready movement from room to room. Projector equipped with safety trips to stop film automatically, avoid damage. Air filter, dustfree. \$695. HARWALD.

For more information circle 105 on coupon

### PROJECTORS, Still

**Constellation Mark II**, remote controlled 35mm slide projector, specially designed lamp; warm air pre-conditioner stops slides popping out of focus; 4" f/3.3 lens; choice of 5 intervals (5, 8, 12, 15, 20 seconds) for automatic projection or remote control or manual; single frame stereo slot. Uses Airequipt changer. \$99.50. GRAFLEX.

For more information circle 106 on coupon

**Opta-Matic Slide Projector** features plastic housing which maker states operates more than 40 degrees cooler. Semi-automatic, takes 36 slides. Flat field for 35mm, No. 127 Super and

Bantam slide sizes. 300 watt. \$49.95. OPTICS.

For more information circle 107 on coupon

**Victor-Soundview**, series of filmstrip-slide projectors in which an original silent projector can be built up in any desired combination into an automatic-advance soundslide machine. 5" f/3.5 lens, 3" and 7" available, 9, 25 and 50 foot push-button cables. Takes Airequipt accessories. VICTOR ANIMATOGRAPH.

For more information circle 108 on coupon

### PROJECTION ACCESSORIES

**"Reelmobile."** Versatile, fitted truck for transporting and storing films, tapes, records. Top serves as projector or recorder table. All metal. Rolls readily on 3" cushion-tread casters, 2 with brakes. Shelf height adjustable. Accommodates **"Discabinet,"** etc. units 41 1/2 x 15" x 36" @ \$57 (plus separator racks selected). 30" and 48" widths also available. WALLACH.

For more information circle 109 on coupon

**Three New GE Lamps.** 500-watt, 4-pin base, with internally mounted mirrors, designed for 8mm and slide projectors. Maker expects these will cut cost of future projectors by eliminating need for reflector as part of machine. The DFR may be burned horizontally; it features a "proximity reflector" that heats (brightens) the filament coils by reflection, and a "collector grid" to catch vaporized tungsten and prevent blackening the sides of the lamp. This is used in EK "Cavalcade" and similar new slide projectors. GELAMP.

O. H. Young Shows GE Lamps

### SOUND, Equipment & Accessories

**"Acoustical Labyrinth"** hi-fi speaker enclosures claim system resonance lower than the un baffled free air cone resonance of the low frequency radiator itself, to add at least an octave to the otherwise possible range of the hi-fi speaker system. Described in new 16p color brochure. STROMBERG-CARLSON.

For more information circle 111 on coupon

**Knight Hi-Fi Speakers**, made in England, with massive magnet structures; 3-way (compression-type tweeters, vacuum-formed woofer cones with mid-frequency radiator cones mounted co-axially. 12" employs 3½ lb. magnet, handles 35 watts, \$69.50. 15" employs 6¾ lb. magnet, handles 50 watts, \$89.50. Impedance 16 ohms; depth 7¾". ALLIED.

For more information circle 112 on coupon

**"Discabinet" System** for cataloging, storing records. Sectional metal case with built-in pocket stop, heavy individual wallets for 90 records, 2 sets gummed numbers, 270 printed catalog cards for 3-way cross-indexing, steel card file with A-Z index. Also models for tapes and for 16mm films; and with doors and locks. WALLACH.

For more information circle 113 on coupon

**Stereo Amplifier.** "Bantam" Knight Model KN-720, 10-watt per channel; 6-position selector knob; 5 pairs of stereo inputs, 2 tape recorder outputs. \$79.95. ALLIED.

For more information circle 114 on coupon

**"Stereo Classic" Preamplifier** is designed primarily for use with magnetic stereo cartridges, for conversion of existing ceramic cartridge stereo systems where the necessary preamplification is not available in the system. Provides feedback type circuit equalization for discs and tape. \$24.95. GE-SPEC.

For more information circle 115 on coupon

**Stereo Tapes at 3.75 ips** are being offered by LIVINGSTON at \$6.95 for a 2-track half-hour stereo tape. Producer claims that improvement in mastering and duplicating process makes possible good quality on this "CX" series of 85 titles. LIVINGSTON.

For more information circle 116 on coupon

**Tape-Indx.** Mylar tabs locate index spots on tape recordings. Adhere to glossy side of tape, pass through recorder. Kit including 360 tabs, 360 location labels, 60 reel labels and 60 box labels \$9. Also **Tape-Indx Master File** binder with 1000 removable cards \$12. DATREL. Free sample.

For more information circle 117 on coupon

**Miratel** announces a new "Instrumentation Series" of rack mounting monitors featuring front panel controls, plug-in construction, 8Mc. video bandwidth, self-supporting kine, and with front panel removable without disturbing the monitor chassis or tube. Regulated power supply is optional at extra cost. 8" monitor \$221; 14" @ \$228; 17" @ \$234. Audio amplifier is available with rack mounted speaker \$35 additional.

Scene from the Walt Disney Production, "White Wilderness"

### Lenses for "White Wilderness"

Kling Photo Corporation reports that Kilfitt lenses and Arriflex cameras were used extensively in taking the new Walt Disney nature classic, "White Wilderness."

### Texas U. Gets Ampex Tape

Ampex has installed a \$50,000 video tape equipment at the University of Texas. This is believed to be the first on any college campus. Results reportedly are twice as good as from kinescopes; production costs more than twice as high for initial material (\$140 against \$60 for a half-hour show) but tapes can be erased and re-used. Tapes will be used for both closed circuit teaching and distribution to commercial stations, but kinescopes will continue to be made available for the many stations, especially the educational outlets, not equipped as yet to use the tape.

### Tiny Photo Cell

A new, very small light-sensitive cell is announced by the RCA Electron Tube Division for use in motion picture projectors and electronic computers. This photojunction cell (RCA-7224) weighs approximately one gram; excluding its

flexible leads it is about the size of an eraser on a pencil. The new cell employs a germanium p-n alloy junction and features fast rise and fall characteristics, illumination sensitivity of 0.7 microamperes per foot candle, and a power-dissipation capability of 30 milliwatts. It has a high sensitivity to red and to infrared as well as good response in the visible spectrum.

### Direct Release by Broadman

Broadman Films offers direct release of many of its motion pictures to religious libraries and dealers on much the same pattern as generally prevails in religious distribution. However, such favorite Broadman films as "Bible on the Table," "Dedicated Men" and "That They May Hear" will continue to be obtained through Family Films as in the past.

### New Sylvania Reflector Lamp

Sylvania announces a compact 150-watt projection lamp with built-in reflector, the "Super Tru-Flector" (A.S.A. Type DCA), said to outperform 8mm projection systems rated as high as 750 watts. It represents a more than 50 per cent increase in light output over the original Tru-Flector introduced last January, with which, however, it is not interchangeable. A small auxiliary transformer, with selector knobs, handles voltages from 110 to 240. At least two projectors, Argus and Bell & Howell, are expected to market projectors using the new lamps before the end of 1958.

### New NAVA Equipment Directory

The fifth edition of the NAVA Audio-Visual Equipment Directory is scheduled to appear early next year. Final deadline on data changes was November 5. A new file-folder system is expected to make the revision job easier and faster. This is one of the most useful, and most accurate, publications in the entire AV field. The fourth edition has been completely sold out.

### Air Corps "Escape" Maps

Denoyer-Geppert offers a broken lot of nine different "escape maps" of Far East regions, originally issued to Air Corps

flyers to use if forced down behind enemy lines. Lithographed on cloth (cellulose acetate), will not crack. Now used as decoration. Could help dramatize geography and history study. Set \$7.75; minimum order \$5 for individual maps ranging from 50 cents to \$2.25.

### Kodak Educational Scholarships

Eastman Kodak Company has awarded 61 direct grants and 39 fellowships as part of its aid-to-education program, which this year amounts to more than \$600,000.

### SMPTE Audio Lecture Series

A series of 20 technical lectures on various phases of sound and acoustics has been announced by the Society of Motion Picture and Television Engineers, Eastern Section. They are held weekly, at various studios, etc.—registration fee for SMPTE members \$50, nonmembers \$60.

### Training Aids from Victor

Five booklets for free distribution to all who attend A-V classes and workshops include: "Four Steps in Skillful Use of Films," "How To Train Projectionists," "Sources of Film and A-V Information," "Helping Teachers Use Films Effectively," and "Planning Schools for A-V Education." Victor Animatograph Corp., Plainville, Conn.

### New Rand-McNally Plant

Rand McNally have just opened a new \$300,000 plant in Downers Grove, Ill., for the manufacture of globes.

### "Rapid" Now Ships, Inspects

Rapid Film Shippers, Inc., subsidiary of Rapid Film Technique, 37-02 27th St., Long Island City 1, N. Y., announces an extension of its film rejuvenation and cleaning services in the direction of handling all details of shipment of films on client's instruction. This includes inspection, cleaning and condition reports. They do not solicit or promote showings.

### Viewlex—Eyegate

The Viewlex, Inc., plant in Long Island City, N. Y., is the site of pictures taken by Eyegate House for its filmstrip "Big City Workers."

### New Educational Producer

Delta Productions, Inc., 7238 W. Touhy Ave., Chicago 31, is a new educational and industrial film producer, headed by Robert L. Ford, formerly with Coronet and EBF. Staff includes Miss Evelyn P. Anderson, university teacher and film writer-producer. First release: "Exploring by Satellite."

### Contemporary Move

Contemporary Films, Inc., has moved to its own 3-story building, at 267 W. 25th St., New York 1, N. Y. Its phone: ORegon 5-7220. Mrs. Shirley Ellis, formerly in charge of 16mm films at the Chicago Public Library, has joined the Contemporary staff, as has Henry Breitrose. Along with Wm. Dennis on the west coast, Contemporary is now exclusive distributor of United Nations films.

## FREE INFORMATION SERVICE COUPON

## HELPFUL BOOKS

**THE AUDIO-VISUAL EQUIPMENT MANUAL.** By James D. Finn. Published under the general editorship of Edgar Dale. 384 pp. 1400 illustrations. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$9.50.

**AUDIO-VISUAL MATERIALS: THEIR NATURE AND USE.** Revised Edition. By Walter Arno Wittich and Charles F. Schuller. 570 pp. 249 Illustrations, 14 Color Plates. Harper & Brothers, 49 E. 33rd St., New York 16, N.Y. 1957. \$6.50.

**AUDIO-VISUAL METHODS IN TEACHING: REVISED AND ENLARGED.** By Edgar Dale. 544 pp. Illustrated; and with 49 full-color plates. Henry Holt and Co., 383 Madison Ave., New York 17, N. Y. \$6.25.

**EDUCATORS GUIDE TO FREE SLIDE-FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Tenth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$6.00.

**EDUCATORS GUIDE TO FREE TAPES, SCRIPTS, AND TRANSCRIPTIONS.** Compiled and Edited by Walter A. Wittich, Ph.D., and Gertie Hanson Halsted, M.A. Fourth Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$5.75.

**EDUCATORS GUIDE TO FREE FILMS.** Compiled and Edited by Mary Foley Horkheimer and John W. Diffor. Educational Consultant, John Guy Fowlkes. 18th Annual Edition, 1958. Educators Progress Service, Dept. AVG, Randolph, Wis. \$7.00.

**MITCHELL'S MANUAL OF PRACTICAL PROJECTION.** 450 pp. Illustrated and cross-indexed. Covers every aspect of motion picture projection. Material presented in easily understood language — not too technical, yet technically accurate. Most complete and practical handbook for projectionists ever published. International Projectionist Pub. Co., 19 West 44 Street, New York 36, N. Y. \$6.00.

**STANDARDS OF PHOTOPLAY APPRECIATION.** A Course of Study in Photoplay Appreciation, Including a Photoplay Approach to Shakespeare. By William Lewin and Alexander Fraxier. Illustrated. Educational & Recreational Guides, Inc., 10 Brainerd Road, Summit, New Jersey. \$4.75.

**A WINDOW TO THE CHILD'S MIND** — Alpark's New Educational Handbook by Dorothy R. Luke, 268 pp. The first authentic analysis of Helen Parkhurst's recorded interviews with children. An indispensable guide for teachers. 1955 Storbidge Publications, P.O. Box 574 Grand Central Station, New York 17, N.Y. \$3.50.

# ANNUAL INDEX OF ARTICLES, EDITORIALS, REVIEWS

(This December issue, not paged in time for inclusion in the index, should also be consulted.)

## EDITORIALS

About Daylighting Again—too many schools are being constructed with wide expanses of glass, making them unfit for use of projected materials	June 279
Archives and Copyrights—AV aids are made to be used, not preserved, and should be up-to-date	May 227
Break Through the Audio Barrier—Increasing use of language laboratories must be accompanied by understanding of equipment and techniques	Nov. 561
Challenge in the Church Field—the magazine has done much to further AV in religious institutions, but realizes there is still a big job to be done	Feb. 68
Dollars for Your Ideas—research aspects of the National Defense Education Act are as important as equipment	Oct. 512
Emphasis on Audio—tools must remain basically usable, rather than be overdeveloped into "electronic wonderlands"	Apr. 174
Knowing What's Available—introducing the Aug. Blue Book, an aid to teachers and the development of the cross media approach	Aug. 382
Misguided Scientists—"entertaining" and "interesting" must not be considered synonyms, especially pertaining to educational films	Jan. 15
Our Greatest Opportunity—significance of the National Defense Education Act	Sept. 463
Pointing South—Southern states have been leaders in non-commercial TV, handling of instructional materials, closed circuit TV	Mar. 122
Togetherness—a spirit of cooperation exists within the AV field and with its representative, <b>Educational Screen</b>	July 319

## ARTICLES

Alterman, Rolland A., Tachistoscopic Teaching—increased attention-span, quicker grasp of reading, spelling, math, result from this method, which also employs ophthalmographs; metronoscopes; reading controllers, accelerators, pacers; rateometers; shadowscopes	June 282
Bailey, Albert R., The Importance of the Independent Educational Film Producer—the value of the small, independent producer lies in direct service, production unity, freedom and inclination to experiment	Jan. 23
Bissex, Henry S., How Overhead Projection Aids Large Group Instruction—this method is effective, relatively inexpensive, should be combined with printing and developing equipment	May 230
Carmony, Edwin, An Elementary Instructional Materials Center—Gary school provides central storage and service for AV and library materials	Oct. 514
Effective Flannel Boards—a do-it-yourself picture story	Mar. 130
Fitzwater, James P., Visualizing Chicago's Visual Education Story—a 3-screen approach, using films, slides, overhead transparencies, presents Chicago's visual education story to coordinators and principals	Sept. 468
Fullerton, Craig and Roberts, John, Movable Self-Contained Rear Projection—Benefits of a portable rear projection unit for one-story buildings having few provisions for darkening	Mar. 129

Garcia, Robert, "Continuity of Life" Film Series Produced at Indiana University—productions showing in detail basic characteristics of plants and animals	Jan. 18
Geography Through Games—giant playground map, created with help of an overhead projector, aids Colorado children in learning geography	Oct. 520
Gibson, Romain, Can Tapes Teach?—Omaha experiment in teaching 7th grade Spanish proves tapes effective even when used by teachers unfamiliar with language	Apr. 180
Gidley, Charles F. and Hunt, Mary Alice, Give Your Pictures a Lift!—acetate method of transferring and preserving pictures	Nov. 566
Grassell, E. Milton, This Administrator Looks at Audiovisual in Perspective—Dr. Amo De Bernardis gives his views on AV budgeting and coordination from the administrator's standpoint	Nov. 562
Greene, James H. and Rising, Justus, Roto-Slap Boards for Classroom 3-D—rotating flannel boards prove good for demonstrating scale models, math problems, etc.	Nov. 570
Halvorsen, H. R., "Colorful" Card Catalog—use of color for cross filing instructional materials	Nov. 565
Hampleman, Richard S., Listening!!!—intelligent listening must be stimulated in students; it has been neglected in recent years	Apr. 175
Hart, William G., Informing the Philippine People—the National Media Production Center sends AV vans to bring informational films, recordings, etc. to the Philippine people	Oct. 524
Hartley, William B., Vim, Vigor, Vitality and Variety in the A-V Program—strong need for more spirited leadership at the local level; AV coordinator should be allowed enough time and be freed from routine duties	Jan. 16
Heinrich, June Sark, Teaching THEM Audio-Visually—AV aids are even more helpful with mentally retarded students than with more educable ones	May 232
Howard, Alexander H., Jr., Film Fit—importance of correct choice of film	Nov. 572
Kemp, Jerrold E., Producing Transparencies for College Instruction—classes benefit when teachers prepare their own materials; how-to-do-it	June 280
Kruse, William F., Some Notes on DAVI'S Ancestry—a survey of the earliest professional organizations in the field; continued in April	Mar. 134
Lepthien, Emilie V., Film Utilization Practices in Seventeen Elementary Schools—survey in the Chicago area shows considerable variation, greater use at primary levels, social studies most shown, recommendations of experts often ignored	Jan. 20
Luce, Arnold E., Flashfilm—Minnesota's Contribution to Better Driver Education—filmstrip and tachistoscope are combined to teach safety, judgment and "preventive" driving	Feb. 70
Lucas, Richard H., Safety Aspects of Audio-Visual Equipment—Underwriters' Laboratories use care and ingenuity in testing for safety hazards	Sept. 466
MacKenzie, M. M., Television in Physical Education—USAF Academy finds TV helpful in teaching and creating interest in sports and other motor skills	Oct. 516

Marty, Fernand L., Using the Language Laboratory—for efficient use, Middlebury College finds accompanying classwork must be modified and the lab should be open to students on a library basis	Apr. 176
Mersand, Joseph, Test Questions on the Mass Media—through exams, students in a New York high school keep up-to-date regarding the mass media	May 234
Moldstad, John, Let's "See" the School's Program—slides, transparencies, TV, films, and filmstrips can be used to inform the public of a school's virtues and deficiencies	Feb. 72
Moore, J. Michael, Improving Language Teaching—practical methods of teaching languages involve both labs and visual aids	Nov. 568
New System Improves Service at the University of Washington Film Center—advance planning and systematized procedure lead to fast, accurate service	Sept. 464
Nicholas, V. R., Dry Mount Technique—how-to-do-it story	Jan. 22
O'Connor, Olwyn M., Do We Need Dewey?—knowledge of library practices provides excellent background for setting up and running AV department	June 288
Osborn, Laura, Building International Goodwill—AV helps children in Detroit schools become acquainted with other republics in the Western Hemisphere	Oct. 519
Reed, Janet S., Students Speak About Audio Learning—Middlebury students are enthusiastic about language set-up	Apr. 178
Roberts, Alvin B., Course in Field Photography—author helps teachers learn fundamental photographic techniques and form useful travlogues	Mar. 123
Roseman, George H., Who Has Sambo's Pants?—AV specialists defeat their purpose when rivalry and jealousy exist	Feb. 75
Salen, George P., Stick 'em Up!—simple, dependable methods for securing bulletin board displays	Feb. 76
Sanborn, William B., San Francisco's Audio Visual Materials Card Catalog—a complete system of all available materials	Aug. 384
Sands, Lester B., The A-V Building Coordinator—A Curriculum Leader—this official can indirectly influence curricula of teachers, administrators and students	May 228
Seehorn, R. W., Models for Industry—sale models are valuable for training engineers, artists, armed forces personnel, etc.	June 286
Smith, Carlton, Physics Film Course Aids Science Education—Harvey White film series helps stimulate interest in science and aids teachers in raising standards	Mar. 126
Stoddard, George D., The Power of Television in Teaching—TV has power and responsibility to open minds, enrich culture, as well as teach classroom subjects	June 284
Strauss, Marion, School Films for Homebound Pupils—in the St. Louis area, the Volunteer Film Association sees that shut-in children have the benefits of AV	Sept. 470
The Terrestrial Globe for Education in the Space Age—history and up-to-date use of the globe as a visual aid	Mar. 132
Wojnowski, Margaret, A High School Lab Classroom—a simple lab can be set up in ordinary classrooms with phonograph, tape recorder, headsets, individual volume controls	Apr. 183

# FINER WORKMANSHIP MEANS LONGER PROJECTOR LIFE

Operation of projector mechanisms in "run-in" cabinet is one of many quality controls that assures long life of Victor projectors.

## Victor sets highest standards for projector quality

Victor 16mm sound projectors have justly earned a reputation for turning in *extra* years of trouble-free service. Just take a look at any new Victor to see why—and you'll find the answer in quality workmanship and materials that meet the most rigid specifications.

For example, every projector mechanism is operated continually for 6 hours to check performance before complete assembly. *Each* amplifier is fully tested with a battery of electronic instruments. Sapphire-tipped film

shuttles are *individually* inspected under high magnification. Measurements of light output and movement of film over sound drum are made for *every* projector to assure brightest pictures and clearest sound.

This kind of attention to detail has always paid off in greater dependability and lower maintenance costs with Victor projectors. So compare workmanship before you order your next projector—and you'll be sure to specify Victor.

### NEW VICTORS FOR OLD—FREE

We wish to obtain the ten oldest Victor sound-on-film projectors still in use—and offer to exchange them for brand-new Victor Assembly 16 models at absolutely no cost. If you believe that your Victor qualifies, simply fill out coupon and mail before this offer expires on December 31, 1958.

MAIL BEFORE DEC. 31, 1958

Victor Animatograph Corporation • Division of Kalart • Plainville, Conn.

I believe that the following Victor sound-on-film projector is one of the 10 oldest still in use: ES-4
